APPENDIX 2

UNIVERSITY PRIZES

The following table summarises the prizes awarded by the University at both undergraduate and post-graduate levels. Prizes which are not specific to any School are listed under general. All other prizes are listed under the Schools in which they are awarded.

<i>School/Department</i>	<i>Donor/Name of Prize</i>	<i>Value</i>	<i>Awarded for</i>
General	The Sydney Technical College Union Award	\$ 50.00	Leadership in the development of student affairs and academic proficiency throughout the course.
	The Medical Staff Association	100.00	General proficiency by graduating student in Medicine (clinical years IV, V and VI).
	The University of New South Wales Commerce Society	20.00	Academic proficiency throughout Commerce course and leadership in student activities.
	The University of New South Wales Wives Group	50.00	First year Faculties of Architecture, Arts and Commerce and the Social Work course—Women full-time students only.
	The University of New South Wales Wives Group	50.00	First year Faculties other than Architecture, Arts and Commerce and the Social Work course—Women full-time students only.
	FRATA	100.00	Essay on a Clinical or Scientific Aspect of Alcoholism by a graduate.
	The Prince of Wales Ladies Auxiliary Pre-Clinical Prize in Pre-Clinical Medicine	100.00	General proficiency in 2nd and 3rd years of the Medical course.
	Wallace Wurth	200.00	General proficiency in Medicine.
School of Accountancy	The Arthur Andersen and Co. Prize	25.00	For the best performance in 14.901G Corporate Organisation and Accounting.

<i>School/Department</i>	<i>Donor/Name of Prize</i>	<i>Value</i>	<i>Awarded for</i>
	The Australian Society of Accountants	\$ 25.00	14.111 Accounting I.
	The Australian Society of Accountants	25.00	14.112 Accounting II.
	Chamber of Manufactures of N.S.W.	10.00	14.131 Auditing and Internal Control.
	Edwin V. Nixon & Partners	21.00	14.321 Business Finance.
	Esso Australia	20.00	14.112 Accounting II—Part-time students only.
	E. S. Wolfenden Memorial	11.00	14.113 Accounting III.
	Greenwood, Challoner & Co.	21.00	14.202 Corporation Law.
	Hungerford, Spooner and Kirkhope	25.00	14.111 Accounting I.
		25.00	14.161 Accounting Honours Seminar I.
	Larke Consolidated Industries Ltd.	20.00	14.112 Accounting II—Full-time students only.
	The Law Book Co. of Australasia Pty. Ltd.	21.00 Books	14.111 Accounting I.
	The Slazengers (Australia) Pty. Ltd.	25.00	14.902G Controllership.
	The Taxation Institute of Australia	21.00	14.201 Taxation Law and Practice.
	The Wilson Bros. (Printers) Pty. Ltd.	25.00	14.311 Production and Industrial Accounting.
School of Anatomy	The prize in Practical Anatomy	30.00	Medicine II—Practical Anatomy (including Radiological Anatomy).
School of Applied Geology	Geological Survey of New South Wales	12.60	25.001 Geology I.
School of Applied Psychology	The Australian Psychological Society	20.00	A Year IV Psychology subject selected by Head of School.

School of Architecture and Building	Alex Rigby	105.00	Master of Building—Distinguished graduate.
	The Australian Institute of Builders	50.00	Building—subjects selected by Head of School (2 prizes).
	Board of Architects of New South Wales	40.00	School Prize Fund—subjects selected by Head of School.
	Chamber of Manufactures of N.S.W.	10.00	Architecture and Building courses—subjects selected by Head of School.
	Dunlop Rubber Australia Ltd.	52.50	Architecture, Year III.
	Frank W. Peplow	24.00	Church Architecture.
	The Institute of Quantity Surveyors	50.00	Quantity Surveying—subject selected by Head of School.
	James Hardie	(i) 100.00	General Proficiency—Architecture degree.
		(ii) 40.00	Building—Year I.
	Joseph Auto-Hot Pty. Ltd.	600.00	Architecture, Final year.
	Marley Australia Ltd.	50.00	Architecture, Year I.
	Master Builders' Association of New South Wales	200.00	School Prize Fund—subjects selected by Head of School.
	Royal Australian Institute of Architects	50.00	Architectural Design and allied subjects in last two years of Architecture course.
	W. A. Nelson	60.00	Studio project—Architecture, Year IV (alternate years only).
School of Botany	E. O. Tout Memorial	21.00	43.101 Botany I and 43.102 Botany II.
School of Biochemistry	W. H. Childs Memorial	25.00	Biochemistry.
Graduate School of Business	The Australian Finance Conference	25.00	33.211G Finance.
	The John Storey Memorial	40.00	Business Administration, Year II.

<i>School/Department</i>	<i>Donor/Name of Prize</i>	<i>Value</i>	<i>Awarded for</i>
	The John Storey Memorial Project	\$ 120.00	Master of Business Administration—best essay.
	The Pioneer Concrete	42.00	Quantitative Methods.
	P. C. Boon	40.00	Business Administration.
School of Chemical Engineering	Abbott	40.00	Chemical Engineering—Year IV.
	The Borden Chemical Company	50.00	3.123 Combined Chemical Engineering.
	Chamber of Manufactures of N.S.W.	10.00	Chemical Engineering—subject selected by Head of School.
	Dunlop Rubber Australia Limited	52.50	Chemical Engineering, Year III.
	Esso Australia	20.00	3.111 Chemical Engineering I.
	The North Shore Gas Co. Ltd.	10.50	Chemical Engineering—subject selected by Head of School.
	Shell	63.00	3.122 Chemical Engineering IIB.
	Simon-Carves (Australia) Pty. Ltd.	21.00	3.121 Chemical Engineering IIA.
School of Chemical Technology	Australian Paper Manufacturers Ltd.	21.00	School Prize Fund—subject selected by Head of School.
	Chemical Technology Society	(i) 20.00 (ii) 20.00	Best graduating student. Best student who has completed years I and II or stages 1 to 4.
	Colonial Sugar Refining	21.00	School Prize Fund—subject selected by Head of School.
	Morganite	100.00	Ceramics—year or stage selected by Head of School (each alternate year).

	Stauffer Chemical Co. (Aust.) Pty. Ltd.	21.00	School Prize Fund—subject selected by Head of School.
School of Chemistry	Abbott	40.00	2.622 Organic Chemistry II.
	Australian Chemical Holdings Ltd.	21.00	Organic Chemistry.
	Australian Glass Manufacturers Co. Pty. Ltd.	4.20	School Prize Fund—subject selected by Head of School.
	Borden Chemical Co.	50.00	School Prize Fund—subject selected by Head of School.
	Chamber of Manufactures of N.S.W.	10.00	School Prize Fund—subject selected by Head of School.
	C.S.R. Chemicals	100.00	Chemistry Honours.
	Drug Houses of Australia Ltd.	10.50	School Prize Fund—subject selected by Head of School.
	George Wright	10.50	2.001 Chemistry I—Full-time students only.
	Inglis Hudson Bequest	6.00	2.611 Organic Chemistry I.
	Merck, Sharp & Dohme (Aust.) Pty. Ltd.	52.50 52.50	2.002 Chemistry II. 2.003 Chemistry III.
	The Nestlé Co. (Aust.) Ltd.	10.50	School Prize Fund—subject selected by Head of School.
	Parke Pope	10.50	School Prize Fund—subject selected by Head of School.
	Science Association	(i) 10.50 (ii) 10.50	School Prize Fund—subjects selected by Head of School.
	Smith, Kline & French	50.00	General Proficiency—Food and Drug Analysis Graduate Diploma.
	Tooheys Ltd.	4.20	School Prize Fund—subject selected by Head of School.

<i>School/Department</i>	<i>Donor/Name of Prize</i>	<i>Value</i>	<i>Awarded for</i>
	Tooth & Co. Ltd.	\$ 4.20	School Prize Fund—subject selected by Head of School.
	Unilever	21.00	Physical Chemistry.
	V. S. Rawson	10.50	School Prize Fund—subject selected by Head of School.
School of Civil Engineering	Association of Consulting Structural Engineers of New South Wales	(i) 20.00 and books to the value of 30.00 (ii) 20.00 and books to the value of 30.00	General Proficiency—Structures (full-time students). General Proficiency—Structures (part-time students).
	Australian Institute of Steel Construction	(i) 60.00 (ii) 40.00	Limit Analysis and Steel Design Structures. Master of Engineering Science degree. Steel Design Assignments.
	The Board of Surveyors Medal	Medal	Surveying, Full-time, Year IV or Surveying, Part-time, Stage 7.
	Chamber of Manufactures of N.S.W.	10.00	Civil Engineering—subject selected by Head of School.
	Dunlop Rubber Australia Ltd.	52.50	Civil Engineering, Year III.
	Freyssinet	30.00	8.126G Prestressed Concrete.
	Water Board Gold Medal	Medal	Public Health Engineering.
School of Drama	Fourth Centenary Shakespeare	20.00	Essay on Shakespearean topic.
School of Economics	The Australian Finance Conference	25.00	15.233 Public Finance and Financial Policy.
	The Economic Society	6.30 and one year's membership of the Economic Society	Economics, Final Year/Stage.

	The Statistical Society of Australia (New South Wales Branch)	20.00	Statistics—General Proficiency throughout course.
	Unilever	(i) 21.00 (ii) 21.00 (iii) 21.00 (iv) 21.00 (v) 21.00	15.101 Economics I. Economics II. Economics III. 15.104 Advanced Economic Analysis. 15.401 Business Statistics.
School of Electrical Engineering	A.E.I. Engineering Pty. Limited	5.00	School Prize Fund—subject selected by Head of School.
	Austral Crane	80.00 80.00	Electrical Engineering, Year III. Power Apparatus and Systems Option or Utilisation and Control Option.
	Chamber of Manufactures of N.S.W.	10.00	School Prize Fund—subject selected by Head of School.
	English Electric Co. Ltd.	21.00	Electrical Engineering—Thesis and Seminar.
	I.R.E.E. Fisk	50.00	Communications or Electronics. Subject selected by Head of School.
	J. Douglas MacLurcan	10.50	Control Systems.
	Morganite	100.00	Electrical Engineering—year or stage selected by Head of School (alternate years only).
	Standard Telephones and Cables Ltd.	10.00	School Prize Fund—subject selected by Head of School.
	The FPE Australia Pty. Ltd.	Books	School Prize Fund—subject selected by Head of School.
School of English	New South Wales Association of University Women Graduates	20.00	English essays—Women students only.
Department of Fuel Technology	Institute of Fuel	31.50	School Prize Fund—subject selected by Head of School.
	Shell	63.00	School Prize Fund—subject to be selected by Head of School.

<i>School/Department</i>	<i>Donor/Name of Prize</i>	<i>Value</i>	<i>Awarded for</i>
School of Highway Engineering	Wabco Australia Ltd	\$ 300.00	Graduate placed first—Highway Engineering Master of Engineering Science degree.
School of Health Administration	The Connie Ratcliff Memorial	21.00	General Proficiency—Health Administration.
	Rupert Fanning Memorial	25.00	Health Administration I, II, III.
Department of Industrial Arts	A. W. Wonders	10.50	General Proficiency in course for the degree of Bachelor of Science in Industrial Arts.
Department of Industrial Engineering	Austral Crane	150.00	Industrial Engineering, Year III.
	Chamber of Manufactures of N.S.W.	10.00	School Prize Fund—subject selected by Head of School.
	Duly and Hansford Ltd.	10.50	Industrial Engineering, Stage 6.
Department of Marketing	H.E. Beaver Commercial Broadcasting Essay Prize	100.00	28.101 Principles of Marketing (Essay).
	Kawneer	100.00	28.113 Marketing Management.
	Philips Electrical	20.00	28.101 Principles of Marketing.
	The Market Research Society of Australia	100.00	28.133 Marketing Research.
School of Mathematics	School of Mathematics	25.00	Higher Mathematics I.
		25.00	Higher Pure Mathematics II.
		25.00	Higher Applied Mathematics II.
		25.00	Higher Pure Mathematics III.
		25.00	Higher Applied Mathematics III.
	Statistical Society of Australia (New South Wales Branch)	20.00	General Proficiency—Theory of Statistics subjects.
	Statistics Fund	40.00	10.321 Higher Theory of Statistics I.
		40.00	10.322 Higher Theory of Statistics II.
		40.00	10.323 Theory of Statistics III.

School of Mechanical Engineering	Babcock and Wilcox of Australia Pty. Ltd.	21.00	School Prize Fund—subject selected by Head of School.
	Chamber of Manufactures of N.S.W.	10.00	School Prize Fund—subject selected by Head of School.
	Cockatoo Docks and Engineering Co. Pty. Ltd.	4.20	School Prize Fund—subject selected by Head of School.
	Colonial Sugar Refining	21.00	School Prize Fund—subject selected by Head of School.
	Dunlop Rubber Australia Ltd.	52.50	Mechanical Engineering, Year III.
	Esso Australia	20.00	Mechanical Engineering, Year I.
	Ford	20.00	School Prize Fund—subject selected by Head of School.
	Harbin Polytechnical Alumni Association	50.00	5.113 Mechanical Engineering Design (Full-time).
		50.00	5.102 Mechanical Engineering Design (Part-time).
	Jeremy Hirschhorn	20.00	Theory of Machines.
School of Medicine	Staedtler	50.00 (order)	General Proficiency—Mechanical Engineering, Year II.
	The Royal Australian College of General Practitioners	50.00	Medicine, Year VI.—Essay.
	W. G. Telleson Memorial	31.50	Written and Clinical Examinations, Year V.
School of Metallurgy	Austral Crane Ltd.	20.00	School Prize Fund—subject selected by Head of School.
	Alcan Australia	10.00	School Prize Fund—subject selected by Head of School.

<i>School/Department</i>	<i>Donor/Name of Prize</i>	<i>Value</i>	<i>Awarded for</i>
	The Australian Institute of Metals	\$ 25.00	School Prize Fund—subject selected by Head of School.
	Australian Welding Institute	20.00 (book order)	School Prize Fund—subject selected by Head of School.
	The Broken Hill Proprietary Co. Ltd.	10.00	School Prize Fund—subject selected by Head of School.
	Chamber of Manufactures of N.S.W.	10.00	School Prize Fund—subject selected by Head of School.
	Zinc Corp. Ltd.	21.00	School Prize Fund—subject selected by Head of School.
	The Eagle & Globe Steel Co. Ltd.	10.50	School Prize Fund—subject selected by Head of School.
	The Electrolytic Refining and Smelting Co. of Australia Pty. Ltd.	10.00	School Prize Fund—subject selected by Head of School.
	Electrolytic Zinc Co. of Australia Ltd.	10.50	School Prize Fund—subject selected by Head of School.
School of Mining Engineering	The Western Mining Corporation Ltd.	50.00	General Proficiency throughout course.
School of Obstetrics and Gynaecology	F. J. Browne Memorial	50.00	Final written examinations in Obstetrics and Gynaecology.
	Gordon Lowe Memorial	50.00	Clinical Obstetrics and Gynaecology.
Department of Optometry	Australian Optical Co. Pty. Ltd.	21.00	Subject selected by Head of School.
	Australian Optometrical Association	21.00	Subject selected by Head of School.
	Chamber of Manufactures of N.S.W.	10.00	Subject selected by Head of School.
	Arthur Cocks & Co. Ltd.	10.50	Subject selected by Head of School.

	Corneal Lens	21.00	31.813 Optometry III.
	Martin Wells Pty. Ltd.	30.00	Subject selected by Head of School.
		50.00	Subject selected by Head of School.
		30.00	Subject selected by Head of School.
	Optical Products Pty. Ltd.	21.00	Subject selected by Head of School.
	The Opticians & Optometrists' Association of N.S.W.	21.00	Subject selected by Head of School.
School of Physics	G. P. Falls	20.00	1.133 Mathematical Physics.
	Head of School's Prize in Physics	20.00	Area selected by Head of School.
	Physics Staff	60.00	1.113 Physics III.
	Physics Thesis	40.00	Honours Thesis.
	School Prize for Physics II	40.00	1.112 Physics II.
School of Political Science	Australian Institute of Political Science	30.00 and one year's subscription to the "Australian Quarterly"	54.111 Political Science I.
	Politics	21.00	54.112 Political Science II.
	The Shell Prize	65.00	Final Year Arts—most distinguished performance in Political Science throughout course.
	The Sydney Morning Herald	42.00	54.113 Political Science III or later stage.
Public Health & Social Medicine	N.S.W. Department of Public Health	50.00	Written and oral examination 79.111 Public Health & Social Medicine.
School of Surgery	The Graduation Prize in Surgery	100.00	Surgery—Medicine, Final Year.
	The Australian College of Ophthalmologists	50.00	Essay on Ophthalmological subject.

<i>School/Department</i>	<i>Donor/Name of Prize</i>	<i>Value</i>	<i>Awarded for</i>
School of Textile Technology	J. B. Speakman	\$ 20.00	Undergraduate Thesis.
	R. J. Webster	100.00	General Proficiency—Textile Technology.
School of Traffic Engineering	Veteran Motorists of Australia	20.00	School Prize Fund—subject selected by Head of School.
School of Wool and Pastoral Sciences	Bayer Leverkusen	50.00	General Proficiency—Wool Technology, Years II and III. Wool Technology, Year III.
	Parkes Wool Promotion Committee	A shield held in the School of Wool and Pastoral Sciences on which the successful student's name is engraved each year.	

Annual Report

1968

THE UNIVERSITY OF NEW SOUTH WALES

REPORT OF THE COUNCIL OF THE UNIVERSITY OF NEW SOUTH WALES

For the year ended 31st December, 1968

The Council of the University of New South Wales has the honour to transmit to the Minister for Education and Minister for Science the following report upon the proceedings of the University during the period of twelve months ended 31st December, 1968.

THE COUNCIL OF THE UNIVERSITY OF NEW SOUTH WALES

as at 31st December 1968

Chancellor

The Hon. Sir JOHN CLANCY, KBE, CMG, LLB *Syd.*, Hon.DLitt *N.E.*

Deputy Chancellor

Sir ROBERT WEBSTER, CMG, CBE, MC, Hon.DSc *N.S.W.*, FASA

Vice-Chancellor

Professor Sir PHILIP BAXTER, KBE, CMG, BSc PhD *Birm.*, FAA, FRACI, FIEAust, MIChemE, Hon.LLD *Montr.*, Hon.DSc *Q'ld.*, Hon.DSc *N'cle.*

MEMBERS

HORACE NEWTON BARBER, MA ScD *Cantab.*, PhD *Lond.*, FRS, FAA, Professor of Botany, Head of School of Botany, and Chairman of the Professorial Board.

SIDNEY EDGAR BARRATT, MIProdE, Assistant to the Managing Director, A.E.I. Engineering Pty. Ltd., Chairman, New South Wales Institute of Technology.

Professor Sir PHILIP BAXTER, KBE, CMG, BSc PhD *Birm.*, FAA, FRACI, FIEAust, MIChemE, Hon. LLD *Montr.*, Hon.DSc *Q'ld.*, Hon.DSc *N'cle.*

ROBERT FRANK ETHERINGTON BOLTON, BSc *N.S.W.*, Technical Manager, Davis-Fuller Adhesives Pty. Ltd.

ROBERT CHARLES PHILIP CAIRNS, BSc PhD *N.S.W.*, ASTC, CEng, MIEAust, MIChemE, Acting Associate Director (Operations), Australian Atomic Energy Commission.

MALCOLM CHAIKIN, BSc PhD *Leeds*, Dip Eng *L.I.T.*, *Shanghai*, FTI, Professor of Textile Technology, Head of the School of Textile Technology and Dean of the Faculty of Applied Science.

The Hon. Sir JOHN CLANCY, KBE, CMG, LLB *Syd.*, Hon.DLitt *N.E.*, Chancellor.

RICHARD ARTHUR CORIN, BE *N.S.W.*, AMIEAust, Engineer, Postmaster-General's Department.

RANDOLPH EDWARD DUNBAR, BSc Dip Ed *Syd.*, Director, New South Wales Department of Technical Education.

The Hon. KEVIN ELLIS, LLB BEc *Syd.*, MLA, Speaker of the Legislative Assembly of New South Wales.

DOUGLAS LYONS FORD, MSc PhD *N.S.W.*, ASTC, ARACI, Director of Research, Union Carbide Australia Ltd.

The Hon. JOHN BRYAN MUNRO FULLER, MLC, Minister for Decentralisation and Development.

Sir JOHN GOODSELL, CMG, FASA, Chairman of the New South Wales Public Service Board.

JAMES MURRAY GOSPER, OBE, BE *Syd.*, AMIEAust, FAIB, Executive Director of the Australian Institute of Building.

HEINZ RICHARD HARANT, BE *N.S.W.*, ASTC, Engineer, Postmaster-General's Department.

HARRY FREDERICK HEATH, BA BEc *Syd.*, Member, New South Wales Public Service Board.

RICHARD MEREDYTH HUEY, BSc BE *Syd.*, MIEAust, FIREEAust, Associate Professor, School of Electrical Engineering.

RICHMOND JEREMY, MB ChM *Syd.*, FRCP, FRACP, Honorary Consulting Physician, St. Vincent's and Prince Henry Hospitals.

WILLIAM RAE LAURIE, BArch *Syd.*, Hon.DSc *N.S.W.*, FRIBA, FRAIA, Architect; Past President, Royal Australian Institute of Architects.

REGINALD WILLIAM JOHN MACKAY, BSc BEc ME *Syd.*, MIEAust.

FRANCIS MACKENZIE MATHEWS, BE *Syd.*, Hon.DSc *N.S.W.*, FSTC, FIEAust, Chief Engineer, Australian Iron and Steel Ltd.; Chairman, Wollongong Technical Education District Council.

MILTON PATRICK MCCARNEY, Vice-President of the Labor Council of New South Wales.

JESSICA RUTH MILNER, BA *N.S.W.*, Commonwealth Post-Graduate Scholar, School of Drama.

WILLIAM PATRICK NICHOLAS, BVSc *Syd.*, Executive Officer, Australian Wool-growers' and Graziers' Council.

CLAUDE EDWARD COURTENAY NICHOLLS, BSc *Lond.*, FRIC, FRACI.

RICHARD GODFREY CHRISTIAN PARRY-OKEDEN, CMG, CBE, Hon.DSc *Syd.*, former Chairman and Managing Director, John Lysaght (Aust.) Ltd. and Past President, Chamber of Manufactures of N.S.W.

SIMON JACQUES PROKHOVNIK, BA MSc *Melb.*, Senior Lecturer, School of Mathematics.

EDWARD OSWALD RAYNER, BSc *Syd.*, MSc PhD *N.S.W.*, MAusIMM, Assistant Under Secretary, New South Wales Department of Mines.

Emeritus Professor Sir STEPHEN HENRY ROBERTS, CMG, MA LittD *Melb.*, DSc (Econ) *Lond.*, Hon.LLD *Brist.*, *Br. Col.*, and *McG.*, Hon.DCL *Durh.*, Hon. DLitt *N.E.*

EUGENE BRYAN SMYTH, Hon.DSc *N.S.W.*, ASTC, FASA, FCIS, Professor of Accountancy, and Dean of the Faculty of Commerce.

CLAUDE WILLIAM STOCKINGS, President, Macquarie County Council; Member, General Council, United Farmers' and Woolgrowers' Association of New South Wales.

ROBERT HENRY SUTHERLAND, Executive Officer, New South Wales Timber Advisory Council.

His Honour Judge GREGORY BEDE THOMAS, LLB BSc BE *Syd.*, District Court, Sydney.

JOHN BASIL THORNTON, BA BSc *Syd.*, Professor of History and Philosophy of Science, Head of the School of History and Philosophy of Science and Dean of the Faculty of Arts.

JOHN JOSEPH TOOMEY, BE *Syd.*, ME *N.S.W.*, DiplHydrEng *T.H.*, *Delft*, AMICE, AMIEAust, Principal Civil and Structural Design Engineer, Nabalco Pty. Ltd.

ALFRED JACOBUS VAN DER POORTEN, BSc PhD *N.S.W.*, Lecturer, School of Mathematics.

The Hon. Sir EDWARD WARREN, KBE, CMG, MLC, Director and Chairman, Coal and Allied Industries Limited; Chairman of the Australian Coal Association and the Australian Coal Industry Research Laboratories Ltd.; Deputy Chairman of the Australian National Committee World Power Conference.

Sir ROBERT WEBSTER, CMG, CBE, MC, Hon.DSc *N.S.W.*, FASA, Deputy Chancellor; Chairman of Directors, Bradford Cotton Mills Ltd. and Burlington Mills (Aust.) Ltd.; Chairman of Directors, Felt and Textiles of Australia Ltd.

JOHN FELL DALRYMPLE WOOD, BSc BE *Syd.*, MIEAust, MACE, Professor of General Education and Head of the Department of General Studies.

HAROLD STANLEY WYNDHAM, CBE, MA DipEd *Syd.*, EdD *Stan.*, Director-General, New South Wales Department of Education.

The Applied Science building.

1. Introduction

As in previous years, the University in 1968 maintained its record of accepting all qualified applicants for places in undergraduate courses, apart from the medical course where there was still some restriction on numbers. It is hoped that the improvement in clinical facilities will enable quotas to be progressively relaxed and enrolment expanded over the next few years.

1968 saw the entry of the first of the sixth year secondary school students into universities in New South Wales. To ensure the maximum degree of equity for all, a specially augmented Admissions Committee of the Professorial Board was constituted and this Committee reviewed all applications where any doubt existed regarding matriculation qualifications.

Total enrolment at all centres was 14,706 which included increases in both undergraduate and postgraduate enrolments. This figure compares with 12,840 for 1967. Of the total of 14,706, 13,546 were at Kensington, 957 at Wollongong, 115 at Broken Hill, 68 at Duntroon and 20 at Jervis Bay.

Faculty enrolments for 1968 were as follows:

	<i>Full-time</i>	<i>Part-time</i>	<i>Total</i>
Applied Science	485	218	703
Architecture	539	209	748
Arts	2,163	3	2,166
Commerce	829	1,360	2,189
Engineering	1,205	936	2,141
Medicine	711	—	711
Science	825	700	1,525
Board of Vocational Studies	248	102	350

A pleasing feature was the continuing increase in postgraduate enrolments. The aggregate increase in this latter area was 396 which included an increase of 57 candidates for the degree of Doctor of Philosophy.

There was a marginal fall in number of overseas students enrolling in the University undergraduate courses in 1968, although the University maintained its policy of not restricting the enrolment of suitably qualified overseas students. The total enrolment of overseas students in undergraduate courses in 1968 was 1,009. The 1967 enrolment was 1,046.

During 1968, 187 higher degrees and 1,380 Bachelors' degrees were conferred and 245 postgraduate diplomas were awarded, making the total number of awards 1,812 which was 385 higher than the 1967 figure of 1,427.

Detailed statistics relating to enrolments will be found in section 2.1 of this report.

Late in 1968 Council gave further consideration to its policy of accepting all qualified applicants for enrolment in undergraduate courses

and decided that, where the circumstances so warranted, quotas might be applied for entry to any of several Faculties in 1969. At the close of the year, it appeared that quotas would be necessary in Architecture, Arts, Commerce and Social Work as well as in Medicine.

The year 1968 was a significant one in our history for in this period the University of New South Wales became known personally to many senior academics and leading university administrators throughout the world as there were several important occasions during the year focusing the attention of some of the world's outstanding academics upon the University. These were a meeting of the Administrative Board of the International Association of Universities; the Tenth Quinquennial Commonwealth Universities Congress; the joint annual meeting of the British Medical Association and the Australian Medical Association, held at the University during the Third Australian Medical Congress, and the visit of senior American scientists arranged as a result of discussions between the Prime Minister of Australia and the President of the United States to develop a better scientific relationship between the two countries. An outline of the more important features of these activities is set out below:

1.1(a) *International Association of Universities*

The Administrative Board of the International Association of Universities met in Australia for the first time from 12th to 16th August, 1968. Professor Sir Philip Baxter, who represents the universities of Australasia and South-East Asia on the Board, was host to the meeting which was centred at the University of New South Wales.

The inaugural session, held at Unisearch House, was officially opened by the Hon. C. B. Cutler, M.L.A., Deputy Premier of New South Wales and Minister for Education and Minister for Science.

The Association meets in General Conference at least once every five years. The Administrative Board meets at least once a year and gives effect to the decisions of the General Conference and directs and supervises the work of the International Universities' Bureau in Paris, which is the permanent secretariat of the Association.

The principal items for discussion at the Sydney meeting were the development of greater international university co-operation, and university administration, for it is on these two themes that the Association will concentrate its attention up to 1970 when it meets in Montreal. The Board also held special sessions to discuss present-day student attitudes and activities.

Personnel of the Administrative Board were as follows:

Honorary Presidents: Dr. Jean Bagniet (President 1955-60), former Rector, University of Brussels, Dr. F. Cyril James (President 1960-65), Principal Emeritus, McGill University, Montreal.

President: Dr. C. K. Zurayk, Professor of History, American University of Beirut, former Rector, University of Damascus.

Vice-President: Dr. John Roche, Rector, University of Paris.

Members: Professor Sir Philip Baxter, Vice Chancellor, University of New South Wales; Dr. Kingman Brewster, Jnr., President, Yale Univer-

sity, New Haven, U.S.A.; Dr. El Nazeer Dafaalla, Vice-Chancellor, University of Khartoum; Dr. H. E. Mohammed El Fasi, Rector, Mohammed V University, Rabat, Minister of Cultural Affairs, Morocco; Dr. R. Frondizi, former Rector, University of Buenos Aires; Dr. A. C. Joshi, former Vice-Chancellor, Punjab University, Chandigarh; Dr. B. Mazar, Pro-Rector, the Hebrew University of Jerusalem; Dr. V. Merikoski, Professor of Law, University of Helsinki; Dr. N. Ohama, President, Waseda University, Tokyo; Dr. E. M. Sergeev, Pro-Rector, University of Moscow, U.S.S.R.; Dr. A. E. Sloman, Vice-Chancellor, University of Essex, Colchester; Bro. J. Otao Stefani, Rector, Pontifical Catholic University of Rio Grande do Sul, Porto Alegre; Dr. W. Zimnerli, Rector, University of Göttingen.

Associate Members: Father Jesus Dias, representing International Federation of Catholic Universities; Dr. Prachoom Chomchai, representing Association of South East Asian Institutes of Higher Learning; Dr. Mohammed Ahmid Soliman, representing Association of Arab Universities; Dr. Efren C. Del Poso, representing Union of Universities of Latin America; Professor R. D. Buchanan, representing Association of Commonwealth Universities.

Secretary-General: Mr. H. M. R. Keyes, former Fellow, Balliol College, Oxford.

Members of the Board remained in Sydney for the following week as guests of the 10th Commonwealth Universities Congress.

1.1(b) Tenth Commonwealth Universities Congress

The Tenth Commonwealth Universities Congress held in Sydney from 17th to 23rd August, was attended by more than 500 representatives from over 150 universities throughout the British Commonwealth. In addition, there were representatives from the Association of American Universities and from the International Association of Universities.

Its basic purpose was to provide the opportunity for discussion on a Commonwealth-wide scale of problems concerned with the general range of higher educational policy, rather than those affecting particular academic fields. In addition, these Congresses demonstrate the community of interest among Commonwealth universities by providing a meeting ground for academic teachers and administrators of various levels from all the countries of the Commonwealth.

The theme of the Congress, which is only the second to be held outside the United Kingdom in the last sixty years, was "The Role of Universities in Higher Education". Congress Chairman was Dr. J. A. L. Matheson, Vice-Chancellor of Monash University, Melbourne, and Chairman of the Australian Vice-Chancellors' Committee.

The Congress was officially opened in the Great Hall of the University of Sydney, by Lord Casey, Governor-General of Australia. Representatives from member institutions who attended came from Canada, Ceylon, East Africa, Fiji, Ghana, Great Britain and Northern Ireland, Guyana, Hong Kong, India, Lesotho, Malawi, Malaysia, Malta, Mauritius, New Zealand, Nigeria, Pakistan, Papua and New Guinea, Rhodesia, Sierra Leone, Singapore, the West Indies and Zambia.

The Third Plenary Session and the Closing Session of the Congress were held in Science Hall at the University of New South Wales. Delegates were also entertained at the University on Sunday evening by a concert by the A.B.C. National Youth Orchestra and on Thursday evening by a dramatic performance by the National Institute of Dramatic Art. The Vice-Chancellor, Sir Philip Baxter, presented a paper entitled "The Use of Scientific Knowledge by Governments and Industry" in the section of the Congress dealing with The Role of the Universities in Technology.

1.1(c) *Third Australian Medical Congress*

The Third Australian Medical Congress was also held in Sydney from 12th to 16th August. It was attended by over 1,000, many from overseas, together with some 700 members of their families.

A feature of the congress of particular interest to members of the University of New South Wales took place on the evening of 15th August in the Science Hall, when Emeritus Professor Sir Hugh Ennor, C.B.E., D.Sc., F.A.A., delivered the Henry Simpson Newland Oration, the subject of which was "Education in a Changing Australian Society".

Prior to the delivery of the oration, the Chancellor of the University, Sir John Clancy, conferred the degree of Doctor of Science, *honoris causa*, on Sir Hugh Ennor.

Following the conferring of the degree, the Chancellor invited the President of the Congress, Dr. R. H. McDonald, O.B.E., to proceed with the general meeting and to hear the Henry Simpson Newland Oration. In doing so, the Chancellor expressed his pleasure that this meeting of the Third Australian Medical Congress should be held at the University of New South Wales.

It was particularly appropriate that the honorary degree of Doctor of Science was conferred on Sir Hugh Ennor when he delivered this important Oration before the distinguished gathering.

Sir Hugh Ennor has had a distinguished career as a biochemist, being appointed in 1948 as Professor of Biochemistry in the John Curtin School of Medical Research at the Australian National University, Canberra. He became Dean of the School in 1953 and in 1964 was appointed Deputy Vice-Chancellor of the Australian National University. He is one of that rare group of men who, in addition to possessing the qualities of mind which enable them to achieve eminence in their profession, also have outstanding talent in the field of administration and are thus able to render service to their fellowmen and to their country in many fields.

An important period in the active life of Professor Ennor commenced in 1961, when he became a member of the Commonwealth Government's Committee which in 1964 reported on the future of tertiary education in Australia. No doubt the wide experience and knowledge gained in this intensive investigation were factors in his appointment early in 1967 as Secretary and Permanent Head of the new Commonwealth Department of Education and Science.

1.1(d) *Visit of Senior American Scientists*

In May the Prime Minister visited Washington, U.S.A., and during the course of discussion with President Johnson, arranged to develop a better scientific relationship between the two countries. When this agreement was announced, it was stated that as a first step the President would send to Australia his top scientific advisers to discuss a treaty between the United States and Australian Governments and ways of improving scientific inter-relationship.

The American delegation comprised ten outstanding scientists under the leadership of Dr. Donald Hornig, Chairman of the Scientific Advisory Committee to the President of the United States.

Dr. James Shannon, Special Adviser to the President of the United States from the Academy of Sciences and formerly Director of the National Institutes of Health and Dr. Herman Chinn, from the United States Department of State, visited the Schools of Botany, Biochemistry, Biological Technology, Anatomy and Psychiatry and the Department of Neurology in the School of Medicine at this University.

Professor Lewis Branscombe of the Joint Laboratory for Astronomy, University of Colorado and Professor Allen of the Lick Observatory in California also came to the University to discuss the prospects of improving facilities for the exchange of scientists in the fields of astronomy and astro-physics between Australian universities and scientific institutions and the Joint Laboratory for Astronomy at the University of Colorado. These discussions were attended by representatives of Australian universities, C.S.I.R.O. and the State Observatory.

Professor R. J. Walsh, Professor of Human Genetics, in his capacity as Secretary for Biological Sciences, Australian Academy of Science, was directly involved in the inter-governmental discussion and was Chairman of one of the discussion groups formed to organize the desired international co-operation.

1.1(e) *Annual Symposium*

"Australia: A Part of Asia?" was the title of the annual University Symposium which was the fifteenth to be organized since the symposium was instituted to deal with a subject of national interest.

In post-war years, the relationship of Australia with the nations of Asia has received considerable attention in many areas. The presence at our universities of so many students from Asia is making it possible both for them and us to learn more of each other's way of life and cultural backgrounds.

Held in the theatre in the Main Building on 7th November it was opened by the Chancellor, Sir John Clancy, who chaired the first session. Chairmen of subsequent sessions were Sir Robert Webster, Deputy Chancellor, Professor D. M. McCallum and Professor B. J. F. Ralph.

Papers were delivered by: Mr. Sibnarayan Ray—"The Viability of Democracy in Asia"; Dr. K. D. Rivett—"Next Steps on Asian Immigration"; Professor F. K. Crowley—"Australia: Outpost of Europe"; Mr. G. C. McColl—"Trade with Asia: Threat or Promise"; Professor Wang

Gungwu—"Cultural Tensions in Asia" and Associate Professor F. H. Reuter—"Food Problems of Asia".

The subject proved of considerable interest and the Symposium was attended by some three hundred representatives of universities, scientific organizations, commerce, industry and professional bodies.

It was evident from the spirited discussion following the final session that the various facets of this subject, both philosophical and practical, which had been so well presented, had been most stimulating and informative. The papers and discussion will be published.

1.2 Australian Universities Commission

From Monday 5th to Friday 9th August inclusive, members of the Australian Universities Commission visited the University to discuss details of the 1970-72 Triennium. These included Sir Henry Basten, Sir James Vernon, Professor S. Sunderland, Professor A. D. Trendall, Dr. W. R. Hughes, Mr. R. A. Simpson and Mr. A. W. Knight. Also in attendance were Messrs. J. K. Kaye, Secretary of the Commission, J. Harris, Assistant Secretary and R. Gillett, Building Officer.

The Commission spent Monday, 5th August, at Broken Hill and Friday, 9th August, at Wollongong University College, while on 6th, 7th, and 8th they were engaged upon inspections and interviews at Kensington. During the course of their visits the Commission made time available for meetings with some members of Council, senior academics, members of the Staff Association and representatives of student organizations.

1.3 State Universities Board

The State Universities Board also visited the University and made inspections on 23rd and 24th July having made a visit to Wollongong University College on 30th April. The visiting group comprised Mr. W. W. Pettingell, Chairman, Mr. H. L. Craig, Executive Member, and Mr. W. E. Henry, representative of the State Treasury. Staff accompanying the Board were Messrs. W. Bradridge, Senior Budget Inspector, State Treasury, Mr. W. F. Neville, Senior Research Officer, and Mr. P. Sinclair, Secretary.

1.4 Sheep and Wool Improvement School

The Special School in Sheep and Wool Improvement held from 27th to 30th May, was the thirteenth to be held since 1956, and the presence of sixty-four students who had attended in previous years was evidence of the esteem in which the School is held in the community. Enrolments totalled 146, of whom 115, including ten women, were managers and overseers of properties, and there were approximately 27 visitors to the School during the four days on which it was held.

Members came from every district in N.S.W., from Western Australia, South Australia, Victoria, Tasmania and Queensland. Pakistan was represented by one Colombo Plan student, while from South Africa there were four Wool Board representatives.

The School was organized by the School of Wool and Pastoral Sciences in conjunction with the Institute of Rural Technology.

The University is ever mindful of the importance of school-university relations and each year there are a number of seminars, schools, lectures, etc. organized to enable senior school students to gain some insight into courses available to them. Hereunder are details of some of these activities.

1.5 Engineering Seminar

A seminar for senior secondary school pupils with the arresting title of "Determining the Shape of Tomorrow: New Philosophies in Engineering", organized by the School of Electrical Engineering, was held from 26th to 28th August. It was attended by some 300 sixth form students who had been selected from applications for the course received from some hundred secondary schools throughout the metropolitan area. The purpose of the course, which embraced lectures and laboratory demonstrations, was to enable these selected pupils in mathematics and science to gain some idea of the exciting new horizons in these fields.

1.6 Summer School of Industrial Science

The 1968 Summer School of Industrial Science, held on 22nd and 23rd August, is the third which has been organized for fifth-year students at high schools in the metropolitan area. This year, 450 pupils from some 54 schools were nominated for participation.

The school was initiated in 1966 by the Oil and Colour Chemists' Association and originally was principally concerned with the chemical aspects of the paint industry. This year, the field was broadened considerably and participating organizations included the Australasian Corrosion Association, the Royal Australian Chemical Institute and the Australian Chemical Industries' Council. Representatives from these organizations gave lectures to acquaint students with the scope of scientific work and career opportunities available in their particular industry. University staff outlined the courses available in the Faculties of Science and Applied Science which would be appropriate for graduates entering such industries.

The organization provided funds for the running of the school, including meals for the students.

1.7 Architecture as a Career

The fifth annual Careers School in Architecture, organized by the Information and Activities Committee of the New South Wales Chapter of the Royal Australian Institute of Architects, was held at the University during the August vacation and was attended by some 300 high school students.

The school embraced a series of lectures by prominent architects and also visits to a number of new buildings of particular interest.

1.8 P. & C. Seminar on Libraries

In July, representatives from almost 100 Parents and Citizens' Associ-

ations attended a seminar on school libraries at the University. This seminar was arranged by the N.S.W. Federation of Parents and Citizens' Associations and was chaired by the University Librarian, Mr. Allan Horton, who is convenor of the Association's Libraries and Text Books Committee.

The Seminar was unusual as it was the first occasion on which the Parents and Citizens Association has conducted a meeting with the sole intention of informing its members of an educational activity; normally meetings of this sort deal with administrative or policy matters.

1.9 School Mathematics Competition

Prizes in the School Mathematics Competition, 1968, conducted by the University of New South Wales, were presented to successful candidates by the Chancellor at a ceremony held in Science Hall on 6th August.

The competition, conducted by the University earlier in the year for secondary school pupils, was the seventh such competition to be held. The purpose is to test mathematical insight and ingenuity rather than proficiency in answering routine questions.

The 1968 competition was conducted in two divisions, a senior and a junior. The senior division was open to all who were under nineteen years of age on 30th June, 1968, and who were not receiving tertiary education. The junior division was open to all who were under seventeen years of age on 30th June, 1968, and who were attending Form IV or a lower form in school. There were 1,374 entrants from more than 200 schools throughout the State—570 in the senior division and 804 in the junior division.

In each division, three cash prizes of \$20 and nineteen of \$10 were awarded. The prizes are donated by IBM Australia Ltd.

1.10 The Andrews Lectures

Professor Konrad E. Bloch, Higgins Professor of Biochemistry at Harvard University, visited Australia during August as the Andrews Lecturer for 1968 and as a Senior Fellow of the Australian Academy of Science.

The Andrews Lectureship in the University of New South Wales was established through the generosity of the late Dr. Andrew Ungar and the lectures are delivered annually by a distinguished visiting scientist on subjects in chemistry or biochemistry which have a relation to biological activity.

Professor Bloch, who was Nobel Laureate in Medicine-Physiology in 1964, is Chairman of the Biochemistry Section of the U.S. National Academy of Sciences and President of the American Society of Biological Chemists.

Professor Bloch delivered three lectures at this University, and one at the School of Chemistry, University of Sydney, the latter being a conjoint meeting with the Royal Australian Chemical Institute.

1.11 *Industrial Design Graduate Diploma*

The first course in Industrial Design in an Australian University was launched this year by the University with the introduction of the Industrial Design Graduate Diploma. For some time designers and interested business organizations have been concerned about the absence of graduate education for designers in Australia. In particular, the Industrial Design Council of Australia has been attempting to encourage developments in this area and to this end has raised \$6,365 from industry to assist the establishment of the new course, which included \$1,200 each from the Rural Bank of New South Wales and the Commonwealth Development Bank.

1.12 *Metropolitan Universities Admission Centre*

An event of considerable significance was the opening in Sydney on 1st November, 1968, of the Metropolitan Universities Admission Centre, which is located in the Crystal Palace Arcade (1st Floor), 590 George Street, Sydney. As well as being an example of practical co-operation between the three Sydney Metropolitan universities, it should prove of great value to the new students enrolling in 1969 and to each of the three universities. The Centre will receive and process applications for enrolment in first year courses at Macquarie University, the University of New South Wales and the University of Sydney.

Students proposing to enrol in first year courses in any of the three metropolitan universities will complete only one application form on which they will be able to list their order of preference for a number of courses at any of the three universities.

Selection will be determined solely on the basis of the expressed order of preference, the academic merit of the applicant and the availability of places. Although the universities retain their individual matriculation requirements, they have, in the case of candidates who have sat for the N.S.W. Higher School Certificate Examination, agreed to adopt a common basis for selection: the aggregate of the marks obtained by candidates in their best five matriculation subjects.

In the past, multiple applications for university places have resulted in uncertainty as to the number of students who would accept places at each of the universities, and this in turn led to delays in advising students of the outcome of their applications. The new system will reduce this uncertainty and improve the admissions procedure. The fact that only one application form is required to be completed will also reduce the amount of paperwork for both the universities and for the 15,000 students who are expected to apply for entry in 1969.

1.13 *Student Achievements*

One result of the extra year at high school required by students under the Wyndham Scheme was noted in this year's Orientation Week functions, for the prospective students were visibly more mature than hitherto both in respect of dress and general demeanour.

While reference is made elsewhere in this report to the numbers enrolled, it is of greater importance to be sure of the quality of the

graduate rather than the total numbers and it is pleasing to note that there is growing evidence of first class products in the Faculties.

There have been two Rhodes Scholars in a matter of several years, but other awards of significance are also coming to light.

The *Australian* newspaper, in conjunction with Qantas, recently conducted the "Pacesetter Quest", the purpose of which was to find six young people whose achievements showed outstanding promise of development in their chosen career (scientist, architect, painter, economist, teacher, student) and to offer them practical encouragement and opportunity for advancement. Mr. Robert Wechsler, one of the six winners, is a member of a biophysics research group in the University, which is studying new methods in the desalination of sea water, and his prize enabled him to attend the first Biophysical International Symposium in Jerusalem where he met Israeli scientists working on nuclear-powered desalination plants.

The winner of the first Robert Gordon Menzies Scholarship—a \$2,500 award tenable for one year in any graduate School of Harvard—which is sponsored by the Harvard Club in Australia in association with the Australian National University, was Mr. L. W. A. Glendenning, who graduated with first class honours in Architecture.

Mr. Terry Dorrough who won the first Studentship of Sydney University's Planning Research Centre, is also an honours graduate in Architecture. The studentship, worth \$2,200 per year, will enable him to carry out postgraduate research in urban planning.

In the field of sport it is gratifying to record that Australia's only dual gold medallist at the 1968 Olympic Games was Mr. Michael Wenden, who has announced his intention to continue his studies for the degree of Bachelor of Commerce, which he commenced at the University at the beginning of the year but had to discontinue owing to the rigours of his training schedule. Mr. Wenden's fine achievement at the Games was recognized by the conferring of the honour of M.B.E. in the recent New Year's Honours.

2. The University's Teaching Responsibilities

2.1

Summary of Enrolments—1968 (All Centres)

<i>Classes of Students</i>							<i>Totals 1968</i>	<i>Totals 1967</i>
1st Degree and Diploma Students								
Full-time	7,334		6,169
Part-time	4,149		3,992
External	77		71
Total		11,560	10,232
Higher Degree Students								
Graduate Diploma Students	603	2,233	1,837
Total of students proceeding to a degree or diploma		13,793	12,096
Other Students—								
Miscellaneous and Certificate students		913	771
Total		14,706	12,840

---------------------	----

2.2 Staff

Finance for the appointment of staff comes from two major sources—general funds obtained from the recurrent grants from governments and from grants by the Australian Research Grants Committee. The staff employed under general funds rose from 2,456 to 2,717 during the year, a 10·6% increase; staff employed by means of other funds rose from 166 to 181, an increase of 9%. Overall, from 1967 to 1968 the staff increased from 2,622 to 2,898 (10·5%).

(a) Academic Staff

At the end of 1968, the academic staff had increased from 819 to 872 over the year, the totals in each category being—

	1.1.68	31.12.68
Professors	77	85
Associate Professors	72	81
Executive Assistants	7	6
Senior Lecturers	222	217
Lecturers	265	276
Senior Tutors	35	38
Teaching Fellows	80	85
Tutors/Demonstrators	52	74
Instructors	9	10
	<hr/> 819	<hr/> 872

A summary of appointments, promotions and other changes relating to senior staff of the University during 1968 follows:

- Professor of Applied Mathematics and Head of School*
Buchwald, V. T., MSc PhD Lond.; 12th February, 1968.
- Professor of Accountancy and Head of School*
Carrington, A. S., MComm N.Z.; 15th August, 1968.
- Professor of Medical Microbiology—School of Microbiology*
Cooper, G. N., MSc PhD Melb.; 1st July, 1968.
- Professor of Engineering—Faculty of Military Studies*
Corbett, A. H., ME BEd CEng Qld.; 1st February, 1968.
- Professor of Textile Physics—School of Textile Technology*
Feughelman, M., BSc Syd., ASTC; 29th November, 1968.
- Professor of Mechanical Engineering and Head of School of Mechanical and Industrial Engineering*
Fink, P. T., BE Syd., CEng, MIMechE, FRAeS, MAIAA; 13th February, 1968.
- Professor of Physical Chemistry—School of Chemistry*
Golding, R. M., MSc Auck., PhD Cam.; 1st September, 1968.
- Professor of German and Head of School*
Hesse, W. G., Dr Phil Breslau, MA Cape T.; 9th September, 1968.
- Professor of Medicine—St. Vincent's Hospital—Faculty of Medicine*
Hickie, J. B., MB BS Syd., FRACP, MRCP (Lond.), FAM College of Cardiology; 14th November, 1968.
- Professor of English—Faculty of Military Studies*
Johnston, G. K. W., MA Oxon and N.Z.; 1st June, 1968.
- Professor of Social Work and Head of School*
Lawrence, R. J., BA Adel., BA Oxon., PhD ANU; 28th November, 1968.
- Professor of Finance—Department of Finance*
Olsson, R. C., BEc Syd., MBA PhD N.Y.; 1st May, 1968.
- Professor of Librarianship and Head of School*
Radford, Wilma, BA Syd., B.S. Col., FLAA; 9th September, 1968.
- Professor of Analytical Chemistry—School of Chemistry*
Smythe, L. E., MSc Syd., PhD Tas., FRACI; 2nd December, 1968.
- Professor of Surgery—St. Vincent's Hospital—Faculty of Medicine*
Tracy, G. D., MB BS Syd., FRCS, FRACS, FACS; 9th September, 1968.
- Professor of History—Faculty of Military Studies*
Turner, L. C. F., MA Rand; 1st July, 1968.
- Associate Professor—School of Microbiology*
Brown, A. D., MSc Syd., PhD Manc.; 1st January, 1968.

- Associate Professor—School of French*
Chambers, L. R., MA DipEd Syd., DU Grenoble; 1st January, 1968.
- Associate Professor—School of Mechanical & Industrial Engineering*
de Vahl Davis, G., BE Syd., PhD Cantab., CEng, AMIMEchE, AMIEAust; 1st January, 1968.
- Associate Professor—School of Mathematics*
Dixon, J. D., MA Melb., PhD McG.; 1st January, 1968.
- Associate Professor—School of Chemistry*
Garnett, J. L., MSc N.S.W., PhD Chic., ASTC, ARACI; 1st January, 1968.
- Associate Professor—Faculty of Military Studies—Economics*
Hodges, H. S., BSc DipEd Lond.; 10th October, 1968.
- Associate Professor—Faculty of Military Studies—Mathematics*
McMullen, A., MA Syd.; 24th October, 1968.
- Associate Professor—School of Chemistry*
Martin, R. J. L., MSc Melb., PhD Lond.; 1st January, 1968.
- Associate Professor—School of Biological Technology*
Moss, F. J., MB BS Melb.; 1st January, 1968.
- Associate Professor—School of Mathematics*
Ninham, B. W., MSc W. Aust., PhD Maryland; 1st January, 1968.
- Associate Professor—School of Chemical Engineering*
Norman, J. R., BSc PhD N.S.W., CEng, AMIChemE, ARACI, AMIEAust.; 1st January, 1968.
- Associate Professor—School of Anatomy*
O'Brien, B. R. A., BSc PhD Syd.; 10th May, 1968.
- Associate Professor—School of Electrical Engineering*
Rose, G. A., BE Adel., AMIEE; 1st January, 1968.
- Associate Professor—School of Chemistry*
Sutton, G. J., MSc PhD N.S.W., ASTC, FRIC, FRACI; 1st January, 1968.
- Associate Professor—Faculty of Military Studies—History*
Swan, D. F., BSc Syd., BEd Q'ld.; 1st August, 1968.
- Associate Professor—School of Metallurgy*
Wallwork, G. R., BSc PhD N.S.W., ASTC, FIM, AMAusIMM; 1st January, 1968.
- Associate Professor—School of Metallurgy*
Warner, N. A., BSc PhD N.S.W., ARACI, AMAus, IMM, AIME; 1st January, 1968.
- Associate Professor—Department of Water Engineering—School of Civil Engineering*
Watson, K. K., BE Syd., ME PhD N.S.W., AMIEAust; 1st January, 1968.

Associate Professor—School of Medicine

Wilcken, D. E. L., MD BS Syd., MRCP; 1st January, 1968.

Wollongong University College

Head of Division of Social Science

Professor Duncan, R., MA Adel., 8th July, 1968.

Professor of English and Head, Division of Language and General Studies

Professor Elkin, BA DipEd Syd., BLitt DPhil Oxon; apptd. Prof. 15th May, 1968; Hd. of Div. 8th July, 1968.

Acting Head, Division of Biological and Chemical Science

Associate Professor Gellert, E., DrPhil Basle, FRACI; 8th July, 1968.

Head, Division of Engineering and Metallurgy and Acting Head, Division of Commerce

Professor Gray, C. A. M., Hon.J.M.N., BSc ME Syd., MIMechE, AMICE, AMIE Aust, Emeritus Professor, University of Malaya; 8th July, 1968.

Head, Division of Physical Science

Professor Keane, A., MSc Syd., PhD N.S.W.; 8th July 1968.

Associate Professor—Division of Physical Science

Wilkins, C. A., MSc N.Z., PhD N.S.W.; 1st January, 1968.

The following persons were either appointed or promoted to the position of Senior Lecturer:

Abbott, J. C., BEc DipEd Syd., BEd Melb., MA Manlt.; 28th April, 1968 (School of Economics).

Barnes, B. A., MSc DipEd Syd.; 5th December, 1968 (Faculty of Military Studies—Mathematics).

Corderoy, D. J. H., BSc N.S.W., PhD Sheff., AIM, AMInstW. (Lond.); 25th September, 1968 (School of Metallurgy).

Driscoll, C. J., MScAgr Syd., PhD Corn.; 1st January, 1968 (School of Botany).

Enderby, D. C., MEc Syd.; 5th March, 1968 (School of Mechanical & Industrial Engineering).

Findlay, T. J. V., BSc PhD St.And.; 13th May, 1968 (School of Chemistry).

Fletcher, B. H., MA DipEd Syd.; 1st January, 1968 (School of History).

Gage, P. W., MB BS N.Z., PhD A.N.U.; 3rd October, 1968 (School of Physiology).

Gould, B. W., BE Tas., ME N.S.W.; 2nd January, 1968 (Department of Water Engineering, School of Civil Engineering).

- Griffith, June C, MSc *N.S.W.*, PhD *Syd.*; 11th June, 1968 (School of Chemistry; also appointed Director of First Year Classes in Chemistry, 12th September, 1968).
- Gupta, J. M., MB BS *Mal.*, MD *Sing.*, MRCPE, DCH (Lond.); 23rd March, 1968 (School of Paediatrics).
- Hill, A. J., BA *Syd.*, BA MA *Oxon*; 24th October, 1968 (Faculty of Military Studies—English).
- Hinrichsen, C. F. L., MDS *Syd.*, MS PhD *Illinois*; 13th January, 1968 (School of Anatomy).
- Jarvis, W. A. H., BA DipEd *Syd.*, BEd *Melb.*; 3rd June, 1968 (School of Business Administration).
- Laird, J. T., MA *Syd.*; 29th August, 1968 (Faculty of Military Studies—English).
- Lim, B. P., BArch, PhD DipTCP *Syd.*, ARIBA, ARAIA; 9th April, 1968 (School of Architecture & Building).
- Lockyer, T. N., MSc PhD *N.S.W.*; 1st August, 1968 (Faculty of Military Studies—Applied Chemistry).
- McHugh, D. J., BSc *Syd.*, PhD *N.S.W.*; 5th December, 1968 (Faculty of Military Studies—Applied Chemistry).
- Macey, M. J. K., BSc *Lond.*, MSc PhD *N.S.W.*, 11th December, 1968 (School of Botany).
- Mason, H. H., BA LLB *Sydney*; 1st July, 1967 (School of Accountancy).
- Mather, R. S., BSc *Ceylon*, PhD *N.S.W.*, MIS Aust.; 7th February 1968 (Department of Surveying, School of Civil Engineering).
- Milfull, J. R., BA PhD *Syd.*; 11th June, 1968 (School of German).
- O'Neill, R. J., BE *Melb.*, MA PhD *Oxon*; 30th June, 1968 (Faculty of Military Studies—History).
- Parkes, T., BSc *Manc.*; 29th August, 1968 (Faculty of Military Studies—Mathematics).
- Purkis, A. E. R., MArch *N.S.W.*, ARIBA, ARAIA; 13th May, 1968 (School of Architecture & Building).
- Sloan, I. H., BA BSc *Melb.*, MSc *Adel.*, PhD *Lond.*; 11th June, 1968 (School of Mathematics).
- Staveley, R. W., BEc *Syd.*, MA PhD *Chic.*; 17th May, 1968 (Department of General Studies).
- Streatfield, C. G. J., BSc (Eng) *Lond.*, AMIEE, AMIE Aust., CEng; 29th August, 1968 (Faculty of Military Studies—Engineering).
- Tardif, J. W., MSc *Syd.*; 10th October, 1968 (Faculty of Military Studies—Chemistry).
- Tindall, J. I., BE *Qld.*, ME *N.S.W.*; 8th July, 1968 (School of Traffic Engineering).

- Turner, J. C., BScAgr Syd., MS PhD *Wisconsin*; 16th February, 1968 (School of Geography).
- Wilczynski, J., BSc *Lond.*, BEd *Melb.*, MEc *ANU*; 24th October, 1968 (Faculty of Military Studies—Economics).
- Wilde, W. H., MA DipEd Syd.; 10th October, 1968 (Faculty of Military Studies—English).
- Wren, B. G., MB BS Syd., MRCOG; 11th November, 1967 (School of Obstetrics & Gynaecology).

Wollongong University College

- Hill, B. V., BA BEd *W.A.*, MA Syd.; 1st January, 1968 (Division of Social Science).
- Kennon, N. F., MSc PhD *N.S.W.*, FRMTC, AIM, AMAusIMM; 9th April, 1968 (Division of Engineering & Metallurgy).
- Standish, N., MSc *N.S.W.*; PhD *Otago*, ASTC, ANZIC, AMAusIMM; 9th April, 1968 (Division of Engineering & Metallurgy).

Resignations and retirements during the year were as follows:

- Abbott, G. J., Senior Lecturer, School of Economics, resigned 9th August, 1968.
- Airey, C. R., Senior Lecturer, School of Accountancy, retired 1st March, 1968.
- Barna, P. S., Senior Lecturer, School of Mechanical and Industrial Engineering, services determined 4th September, 1967.
- Bowra, R. L., Senior Lecturer, School of Accountancy, resigned 31st August, 1968.
- Bosson, G., Professor of Mathematics, School of Mathematics, retired 31st December, 1968.
- Clarke, R. H. J., Senior Lecturer, School of Electrical Engineering, retired 30th August, 1968.
- Couper, J. M. (Dr.), Senior Lecturer, School of English, resigned 31st December, 1968.
- Dixon, J. D., Associate Professor, School of Mathematics, resigned 16th August, 1968.
- Fraser, W. A., Senior Lecturer, Faculty of Architecture, retired 23rd June, 1968.
- Haggerty, G. J. (Dr.), Senior Lecturer, Department of Structural Engineering, School of Civil Engineering, resigned 15th August, 1968.
- Hoy, R. J. (Dr.), Senior Lecturer (conjoint), School of Medicine, resigned 30th November, 1968.

Jones, P. D., Associate Professor, School of Electrical Engineering, resigned 17th May, 1968.

Koch, L. E. (Dr.), Senior Lecturer, School of Applied Geology, retired 31st December, 1968.

Kramer, L. J., Associate Professor, School of English, resigned 2nd June, 1968.

Korner, P. I., Professor, Head of School of Physiology, resigned 18th June, 1968.

Ludbrook, J., Professor of Surgery, School of Surgery, resigned 31st December, 1968.

Martin, L. W. O., Senior Lecturer, School of Chemistry, retired 19th February, 1968.

Porebski, O. B. (Dr.), Senior Lecturer, School of Applied Psychology, resigned 1st February, 1968.

Swinbourne, E. S., Associate Professor, Director of First year Studies, School of Chemistry, resigned 29th August, 1968.

Watton, E. C. (Dr.), Senior Lecturer, School of Chemistry, resigned 31st December, 1968.

Wendell-Smith, C. P., Associate Professor, School of Anatomy, resigned 19th May, 1968.

Woodhead, R. W., Senior Lecturer, Department of Structural Engineering, School of Civil Engineering, resigned 19th August, 1968.

Other Senior appointments and promotions were:

Clark, J. R. J., MA *Tas.*; 14th October, 1968, Director, National Institute of Dramatic Art.

Delaney, J. E., 24th May, 1968, Administrative Officer, Vice-Chancellor's Unit (seconded as Deputy Chief Executive Officer, Prince Henry and Prince of Wales Hospitals).

Garrick, A. J., BA *Melb.*, 12th January, 1968, Director Institute of Languages.

Katz, F. M., MA *Melb.*, PhD *N.E.*, BEd *Melb.*, 28th November, 1968, Director, Tertiary Education Research Centre.

Jupp, J. J., BA *Syd.*, Senior Counsellor, Student Counselling & Research Unit.

Lambert, P. E., BE *Syd.*, MSc *Ohio*, 14th October, 1968, Manager, University Computing Centre, School of Electrical Engineering.

Moore, J. E., LLB *Syd.*, 7th June, 1968, Deputy Bursar (Property) Division of the Bursar.

(b) *Non-academic Staff*

The numbers of non-academic staff employed at the commencement and at the close of the year were as follows:

	<i>Financed from General Funds</i>		<i>Financed from Special Purpose Funds</i>		<i>Totals</i>	
	<i>Number of Staff</i>		<i>Number of Staff</i>			
	<i>1/1/68</i>	<i>31/12/68</i>	<i>1/1/68</i>	<i>31/12/68</i>	<i>1/1/68</i>	<i>31/12/68</i>

(c) *Industrial Relations*

This year there was again a marked increase in negotiations with associations and unions on salaries and conditions of employment. Many agreements made previously had expired and this led to fresh agreements being undertaken. Those covered in this category were clerks, professional officers, library staff, shorthandwriters, office assistant/typists, laboratory craftsmen and foremen.

The laboratory staff salaries claim in which proceedings commenced several years ago resulted in an award. Negotiations with the various skilled trades unions during the year have resulted in an award covering all classes employed. Settlement of the award will be made early in 1969.

*The Union (second stage) as seen from the
University's Anzac Parade entrance.*

C25

2.3 Academic Developments

(a) The Faculties

Applied Science

In the School of Chemical Technology, the undergraduate course in Industrial Chemistry was modified slightly to include in the second year a series of lectures on Instrumental Analysis and another group of lectures on Chemical Process Equipment which have been brought forward from the existing third year programme. The purpose of these changes was to bring second year students into earlier closer contact with the School than has hitherto been possible.

Major plant received included an atomic absorption spectrometer, two multipliers, a function generator, a digital voltmeter and an X-t/Y-t recorder for the School's analogue computer.

Architecture

A new three-year course leading to the degree of Bachelor of Science (Architecture) was successfully launched in 1968 with a first year enrolment of 124.

During the year the School of Architecture and Building embarked upon a developmental survey to assess the changes in architectural, building and planning education which may be necessary within the next decade, and to examine the best possible means of dealing with them. Several meetings were held, involving staff and student representatives, and as a result of these and other staff-student activities there was a notable improvement in staff-student relationships and in the student body's sense of responsible involvement.

Following discussions with the Bondi Development Association, the full-time final year students in Architecture were given the comprehensive redevelopment of Bondi and Ben Buckler as their major design assignment for the year. Messrs. Grace Bros. donated \$500 towards the cost of materials and featured the students' exceptionally fine models in a public exhibition at their store at Bondi Junction. It is hoped that this project will generate sufficient interest to launch an actual redevelopment programme.

Considerable development took place in the School's Research Laboratory at Randwick, including the construction of a climate chamber and the lining of the artificial sky, referred to in previous reports. Further equipment will be necessary to exploit the laboratory's full potential, but already five reports on laboratory projects are in preparation.

During 1969 the School conducted Graduate Diploma Courses in Architectural Acoustics, Building Construction, Housing and Neighbourhood Planning and Landscape Design, with a total graduate enrolment of 38.

The School was fortunate during the year in obtaining Professor Christopher Tunnard, Head of the Department of City Planning at Yale University, as a Visiting Professor. Professor Tunnard conducted a

valuable series of seminars with the graduate students, culminating in an investigation of Sydney's outdoor recreational needs to the year 2000.

Second year students of the Housing and Neighbourhood Planning course undertook research into urban design principles and concepts for the proposed new town of Menai, in the Shire of Sutherland. The results of this research were published with funds donated by the Sutherland Shire Council, and took the form of an illustrated report entitled *Menai New Town*. It is hoped that this report will be of real assistance to the Council in planning for an estimated population growth of some 60,000 people.

Arts

Among the academic changes in the Faculty of Arts during the year were the addition of the School of Russian, the creation of the Chair of Librarianship and the division of the School of Western European Languages into the three Schools of French, German and Spanish.

Two new professors were appointed, Professor W. G. Hesse (German) and Professor Wilma Radford (Librarianship). The appointment of Professor Radford to the Chair of Librarianship brings the number of women professors in the Faculty of Arts to three, the other two being Professor Judith Robinson (French) and Professor Tatiana Cizova (Russian).

A second language laboratory has been built for the use of the Faculty of Arts, and during the year the School of History and Philosophy of Science took delivery of a Questar Telescope.

The School of English in its undergraduate programme continues to provide for all pass students and for the students who seek Honours in Literature although there is as yet no full Honours programme in Language. Postgraduate students work on theses (after first completing qualifying programmes if those are necessary), but it is hoped to begin in 1969 postgraduate course work for a two-year pass M.A. degree.

Enrolment figures in the *School of Education* represented a considerable increase on those for 1967, the enrolment for the Diploma of Education being 181 and for the Master of Education 26. The Diploma of Education programme was offered in 1968 for the first time in Wollongong University College in collaboration with Wollongong Teachers' College and 26 students were enrolled at that centre.

Council has approved the inclusion of Education as one of the subjects in the course leading to the degree of Bachelor of Arts and it is intended to introduce Education I as a subject in the Faculty of Arts as soon as staff is available to give this course.

In 1968 courses in the *School of French* were restructured, to provide for studies in three distinct, though related, areas: (1) The French Language (in both its spoken and written forms), (2) French literature and thought, (3) French civilization and society. Some study of each of these areas is compulsory in all Pass and Honours courses, so as to give students a balanced picture of the French contribution to human culture.

In the teaching of the language, the main stress is laid on developing the student's ability to understand and speak French with the greatest

possible degree of proficiency. With this aim in view, many of the lectures and tutorials are conducted in French. Regular written exercises are supplemented by periods of oral practice in the language laboratory and in discussion groups. More advanced courses are also offered in theoretical aspects of language study.

In 1968 the School offered for the first time a seminar course for M.A. and Ph.D. students on the methodology of literary criticism and research and on different theoretical approaches to the study of literature.

The *School of History and Philosophy of Science* enrolled over 1,000 students in 1968, which was the largest enrolment in the Faculty of Arts. Examining such a large number of students is an obvious problem, but the objective examinations of 1967 were discontinued in 1968 as they were found to be insufficient. Two examinations were held during the year (at the beginning of second and third terms) and one at the end of the year. The first two papers were of the essay type, while the last included both essays and objective questions. Short objective tests were also set for the weekly tutorials, and the results were incorporated in the final examination aggregate, together with a critical assessment of the student based on tutorial assignments and performance in class.

A new third year course was implemented during the year; it is devoted to treating science as a social entity and considering both its internal economy and its relationships with other social institutions.

Students enrolled in the *School of Librarianship* included an increasing number of graduates of the University of New South Wales and also many students from other Australian states and overseas countries, particularly those in the South-East Asian area. Excellent co-operation with the School of Librarianship was given by library authorities and librarians in the Sydney metropolitan area.

A new course on Communist China was introduced in the *School of Political Science*, and some lectures on Indian government and politics were added to an existing course. At "Open Forums" held with Political Science students, a number of grievances and criticisms were aired, not many of which were new to the School. Undergraduates were told firmly that, while the School was and always had been responsive to their views about syllabuses, it could not contemplate the students have any "say" in their construction as of right. A continuing informal discussion circle (of an extra-mural or extra-curricular kind) was established, and proved a success as a means of keeping in even closer touch with students, especially senior students.

A modified course structure was introduced in the School of Sociology which took into account the fact that a large number of students enrol in Sociology I essentially as a terminating course, with no intention of advancing in this subject.

Accordingly, advanced work in statistics will now be delayed until the second year and consequently will be taken only by those students who are studying sociology as a major part of their degree structure. At the same time in the middle of the first year a special supplementary tutorial was provided for those students who became interested in the

possibility of undertaking an Honours degree, although the decision does not have to be made until the beginning of the second year.

The pattern of optional electives was maintained in the second year but with an important modification, namely that a course in sociological theory must be taken in the first half of the year by all students before they split into smaller classes for the specialization of their choice. The third year development allows a student to choose one of a second series of optional subjects and at mid-year all students from all options join a single class for advanced sociological theory.

A particularly satisfactory aspect of the optional course programme was the provision of two advanced courses for those students who developed a particular interest in one area of sociology and in 1968 advanced courses were introduced in Social Stratification and in Small Groups.

The *School of Russian* concentrated during the year on detailed preparation of material for the courses Russian IZ and Russian I which will be offered for the first time in 1969. The most tangible results of the activities of the School were the growing collection of Russian books in the University Library.

In the *School of Spanish*, four new third year courses were introduced during 1968; Spanish IIIA (Golden Age Spanish Literature), IIIA (Honours) (Spanish-American Literature), IIIB (18th and 19th Century Spanish Literature) and IIIB (Honours) the IIIB course plus 19th and 20th Century Spanish-American Literature, with emphasis on the literature of Social Protest). In 1969 Spanish IV (Honours) will be introduced and four sections of this programme will be presented.

Staffing of the School continued to be a major problem in 1968 but, despite this, the year saw the first of the B.A. pass students complete the degree with a major in Spanish.

In the *Department of History* at Wollongong University College, arrangements were completed in 1968 for the offering of two new third year courses in 1969 to replace the present course, which deals with both Australian and South-East Asian history. One of the new courses will be concerned solely with Australian social history, the other with South-East Asian history.

During 1968, in both second and third year, lectures were reduced to one a week and tutorials increased from one to two. These changes were designed to reduce student dependence upon the word of authority, and to encourage them to work and think more independently. Associated with these changes was an increase in the weighting attached to the four essays written during the year by each student, in assessing end-of-the-year results. The essays were given a weighting equal to that given the annual examinations. Consideration is being given to the possible abolition of annual examinations in this department, at least in second and third years.

Biological Sciences

Developments in the field of the biological sciences led Council in 1968 to approve the establishment of a new Faculty of Biological

Sciences. Professor B. J. Ralph, formerly Dean of the Faculty of Science, was appointed Dean of the new Faculty and Head of the newly created School of Biological Technology within the new Faculty. Other new Schools created in the new Faculty were those of Biochemistry, Botany, Microbiology and Zoology and these, together with the School of Applied Psychology which was transferred from the Faculty of Science, constituted the new Faculty of Biological Sciences.

The inter-disciplinary interests and activities of the staff of the new Faculty have been extended and collaboration with a number of other Schools of the University strengthened. Of note was the establishment of a substantial research group in Petroleum Microbiology and the extension of activities in the Mineral Microbiology group to studies of microbial sulphate reduction.

Activities in the School of *Biological Technology* are principally at the postgraduate level in formal courses and in research training in areas of application of Microbiology and Biochemistry.

The School of Biochemistry offers the subject as a major unit in courses conducted by the Faculties of Science and Medicine. During 1968, changes in the course structure approved by the Faculty of Medicine were introduced whereby the Biochemistry course which previously extended over five terms during the second and third years will now be taught over three terms in second year.

During 1968 both the new courses and the last two terms of the old course were given. This required considerable extra tuition which was eased somewhat by the relatively lower number of students in second year, resulting from the changed system of secondary education. It is expected that medical students will benefit by the more intensive course which will now precede instruction in Physiology.

A new format for practical work reports was introduced into second year courses. These are designed to make the students prepare themselves before the class begins and to reduce the time spent by students in writing up their experiments.

In the *School of Botany* the first year course in Introductory Biology was modified and expanded to include lectures and class work on human biology and this part of the course was contributed to by staff in the Schools of Anatomy and Human Genetics from the Faculty of Medicine. The course was renamed General and Human Biology and the enrolment totalled 660, of whom 60 were part-time students. All lectures were given on close circuit TV, the video-tapes being duplicated for use at Wollongong University College where there were 50 students.

The second year course in Genetics and Biometry was again taught jointly with the School of Zoology. In addition to the normal undergraduate lecture courses in all branches of Botany, special servicing courses were provided for students in the Department of Food Technology and the School of Architecture and Building.

The School of Zoology was a contributor to the teaching programme of the new General and Human Biology course which was taught for the first time in 1968. New teaching commitments included the introduction of an experimental embryology laboratory class in which fertili-

zation and early cleavage were studied in living sea urchin eggs, and two experimental physiology laboratory classes in which heart and nerve actions were studied using kymographs and cathode ray oscilloscopes. The applied entomology content of the third year Entomology course was greatly increased and this part of the subject was completely reorganized.

A new course in Marine Ecology as part of the third year course in Zoology, was taught for the first time. The course began with a week of field work at the Smith Lake Field Station and practical work was done in Botany Bay.

The sixth Summer School in Field Biology held during February at the Smith Lake Field Station was attended by 20 students, four staff and three visitors. During the second year Zoology field camp held in May, eight field studies were made in the marine, brackish and terrestrial environments. The camp was attended by 50 students, nine staff and two visitors. During August three staff and nine students studied coral reef communities on the Great Barrier Reef.

The camps are believed to be largely responsible for the popularity of the courses in Zoology and it is considered that they improve both staff-student relations and the outlook of students to university life and study.

In the School of Applied Psychology members of the staff co-operated with the students in trying to plan improved courses. There will probably be no major changes in 1969 but we anticipate that by 1970 there will clearly be an increased emphasis on the training of students to *do* psychological work as well as to think about it bookishly.

Commerce

Approval was given in 1968 for the award of the Pass degree "with merit" in the Faculty of Commerce. Although this award is not to be regarded as a substitute for the Honours degree, it was felt that some form of recognition should be given to those students who excel in their studies at Pass level.

In response to the pressing demand for management education at the graduate level, the University late in 1968 reorganized its business studies programmes, replacing the former School of Business Administration with a full inter-disciplinary multi-professorial *Graduate School of Business*, within the Faculty of Commerce. The school now has six professors, and a seventh chair recently created will be filled early in 1969.

In establishing this graduate School, the University is building on its pioneering efforts, which commenced with the provision in 1961 of the first graduate programme in Australia in business administration. In achieving this, the University was encouraged and supported financially by businessmen and industrialists whose enthusiasm and endeavour enabled the University to create Chairs of Marketing and Finance.

The accelerating progress in technological developments in Australia and overseas has made the management function more complex necessitating the development of higher managerial skills, especially at the

graduate level, and the objective of the new School of Business is to produce managers who can develop organizational systems which will respond efficiently and productively to the ever-changing needs of society and the national economy.

The demand for the Master of Business Administration course has been rising steadily and the establishment of the Graduate School of Business will enable the University to increase the number of students admitted and to provide a more diversified M.B.A. programme for executive trainees. Further work in the field of administration is carried out by the Institute of Administration. (See section 2.4 (b).)

In the *School of Economics* some modifications in course structures were made, a significant one being the introduction of the compulsory second-year subject, Econometric Methods, in the Economics course. This subject is intended as a sequel to Business Statistics and is designed to make students majoring in Economics more aware of and proficient in the application of quantitative techniques in dealing with macro and micro economic problems.

Teaching in the Master of Commerce, Economics Graduate Course began in 1968 with an enrolment of 19 candidates. In all there were 33 candidates enrolled for postgraduate degrees in the School and undergraduate enrolments totalled 770, in addition to those, numbering about 1,000, who studied Economics in the first year of the Bachelor of Commerce Courses. In addition to Commerce students, there were 250 students in the Faculty of Arts taking subjects offered by the School of Economics, a number of whom were studying at Honours level.

The revised course structure governing the award of the degree of Bachelor of Commerce introduced in 1967, was in full operation in 1968 and this revision was considered to be achieving its desired aim of improved flexibility.

In the *School of Accountancy*, to meet the demands of a rapidly changing business world and to keep in step with technological advances, the scope of the newer Accountancy subjects—Data Processing and Information Systems, Operations Research and Organization Theory—is being developed. The introduction of the formal course leading to the degree of Master of Commerce (Accountancy) was well received and enrolments in this course were most gratifying.

Engineering

Since September, 1964 the *School of Civil Engineering* has operated as three separate departments, namely, the Department of Structural Engineering, the Department of Water Engineering and the Department of Surveying. In November, 1968 the University Council appointed Professor H. R. Vallentine as Head of the School and it has since operated as a single multi-professorial School.

The revision of the full-time course in Civil Engineering was completed during the year. The load in second year was eased by moving some of the material to later years of the course and the principle of elective subjects was reintroduced in the final year of the course.

These changes in the full-time course necessitated a fairly extensive

revision of the part-time course, the subjects of which were aligned with those of the full-time course to a very large extent, thus facilitating a transfer between one course and the other up to a fairly late stage.

The total undergraduate enrolments in Civil Engineering and Surveying were 914. In the Master of Engineering Science courses 190 students were enrolled while there were 53 students enrolled for research degrees, making the total student population 1,157.

The considerable increase (25% over 1967) in the number of students studying for the Master of Engineering Science degree is very gratifying. Employers in increasing numbers are supporting the programme by releasing their staff members to attend lectures during the day.

In the *School of Electrical Engineering* the year 1968 saw the start of the preparatory work for the major changes in the full-time B.E. undergraduate course. For the first time a series of introductory lectures on some of the problems, topics and techniques met with in electrical engineering was given under the title "Systems and Computers". These lectures formed a one-hour strand in the first year subject Engineering I and were available as an option for all students taking the subject, both part-time and full-time, and also those from other Schools and Faculties.

The enrolment in the School was made up of just over 700 undergraduates in the full-time and part-time courses, with almost 150 post-graduate students, the majority of whom were undertaking the formal course programme for the degree of Master of Engineering Science. There were 25 Ph.D. registrations and 23 for Masters' degrees in Engineering or Science.

In the *School of Mechanical and Industrial Engineering* the proportion of full-time students in the undergraduate course continued to rise. A new first year course was introduced which was examined by means of two tests each term in place of the conventional final year examination, and it is believed that this helped to make the teaching more effective. Revised courses for the senior years were also planned and will come into operation progressively.

Undergraduate enrolment totalled 535; there were 128 students studying for higher degrees (Ph.D., M.Eng.Sc. and M.E.) and 47 studying for the Graduate Diploma in Industrial Engineering.

There was a continuing evolution in the teaching activities of the *School of Traffic Engineering*. When it started eleven years ago it was the first of such school in the British Commonwealth and the few American schools in Transport and Traffic were strongly orientated towards the professional practice aspects of road traffic. Owing in large measure to the interest that has developed in the School in theoretical models of traffic behaviour, the demand for transport services has been linked with land use characteristics and the nature of the transport itself.

During the year interesting new teaching links were established with the Department of Town Planning. The main challenge for the immediate future is the introduction of a formal graduate diploma course in transport in which the emphasis will be placed on the operational characteristics of all transport modes and their inter-relationship.

Medicine

As part of the restructuring of the earlier years of the medical course, teaching in Human Anatomy was given wholly within the second year of the course for students entering second year in 1968. Anatomical dissection is no longer carried out by medical students, and new methods of teaching based on small group tutorial work around prosected material have been introduced. Coincidentally, teaching in the fields of cyto-histology, embryology and neuroanatomy has been substantially altered to meet the new situation. The School of Anatomy has contributed substantially to the new first year Science course in General and Human Biology.

The *School of Human Genetics* also participated in the General and Human Biology course for first year students, its contribution being in the fields of human genetics, human ecology and human variation. The School also contributed to teaching in Botany II and Zoology I. During 1969 it will provide a short course in Medical Statistics for the third year students in addition to the course in Human Genetics. There were six postgraduate students enrolled.

In the *School of Medicine* the research and graduate training programme continued to expand, this having been made possible by grants from national agencies which support research and from industry. Fourteen students working towards higher degrees were supervised during the year, ten for the M.D. and four for the M.Sc.

Undergraduate teaching of *Obstetrics and Gynaecology* commenced at St. George Hospital in addition to the teaching at the Royal Hospital for Women. Working drawings for the teaching block at the latter hospital were completed and it is expected that tenders for the building will be let in the near future.

Preparation and planning for the development of the former Eastern Suburbs Hospital as the University's Children's Hospital were undertaken by the *School of Paediatrics* during the year.

Activities in *Pathology* in 1968 included teaching by the staff of the Department of Pathology at St. George Hospital. In 1969 this will extend to St. Vincent's Hospital. The year was the last in which the present undergraduate course in Pathology began in the final term of third year Medicine, to continue for four terms. From 1969 onwards an introductory course on General Pathology will be conducted in third year followed by a course of Regional Pathology in fourth year.

In addition to providing instruction to undergraduates in the Faculty of Medicine, the *School of Psychiatry* provided a course in mental health for students in the School of Social Work. Members of the School also participated in the course "Sociology of Medicine" organized by the School of Sociology. The main postgraduate teaching contribution of the School of Psychiatry is channelled through the Institute of Psychiatry.

During 1968 the new Chair of *Surgery* at St. Vincent's Hospital was filled and a Chair of Surgery at St. George Hospital created. The pattern of teaching which is evolving in the hospitals is for the visiting and registrar staff of the hospitals to accept responsibility for the more vocational aspects of surgical teaching, while full-time academic staff

concern themselves with more broadly-based, and often inter-disciplinary aspects. The future problem of examining some 200 graduating students is being tackled and "objective" testing was introduced in 1968.

In the *School of Paediatrics* formal training in paediatric psychiatry was expanded at the end of 1967 and this expansion continued throughout 1968. Teaching in neonatal paediatrics was initiated at the St. George Hospital since students there have reached the appropriate stage of their training.

The training programme for hospital registrars and resident medical officers was further developed and expanded considerably in the field of paediatric psychiatry.

In addition to involvement with other organizations and postgraduate activities, the School ran a very successful weekend course for general practitioners.

Military Studies

In accordance with the agreement between the University and the Department of the Army, the Faculty of Military Studies was established at the Royal Military College on 29th April, 1968 and the inaugural meeting of the Faculty was held at Duntroon on 20th June.

Sir Leslie Martin had been appointed Dean of the Faculty and Professor of Physics in 1967. Four other chairs were created during 1968, one of which (Mathematics) has still to be filled. Approval is expected for the establishment of two further chairs in the near future.

The Faculty of Military Studies offers courses leading to the degree of Bachelor of Arts in Military Studies and the degree of Bachelor of Science in Military Studies. The former degree applies to a course in the humanities and social sciences, and the latter to courses in both applied science and engineering. A programme of military studies is part of the requirement for each degree.

The first year of the courses commenced to operate in 1968, and the second years have been approved for implementation in 1969.

The Faculty consists of the academic staff at Duntroon (the majority of whom have taken appointments with the University), the Commandant of the College and certain military members, the Heads of the Schools at Kensington whose disciplines are included in the courses conducted by the Faculty, the Registrar of the University and one of the Pro-Vice-Chancellors. The Department of the Army reimburses the University for all costs incurred as a result of the agreement.

Enrolments in the Arts, Applied Science and Engineering courses totalled 68 and academic staff consisted of 3 professors, 4 associate professors, 13 senior lecturers and 6 lecturers.

Before the Faculty of Military Studies was established, committees were set up to consider the appointment of members of the College academic staff to the staff of the University. The majority of the College teaching staff were appointed at appropriate levels and will continue in the employ of the University for the duration of its affiliation with the Royal Military College.

Science

As mentioned earlier, the School of Applied Psychology and the biological departments were transferred out of the Faculty of Science during the year to create the Faculty of Biological Sciences. Because of the developments in the fields of physics and the growing importance of the science of optometry, Council divided the School of Physics into two Schools, one retaining the title of School of Physics under the headship of Professor E. P. George and the other being entitled the School of Applied Physics and Optometry under the headship of Professor C. J. Milner.

Professor B. J. Ralph who was formerly Dean of the Faculty of Science was appointed Dean of the new Faculty of Biological Sciences, as mentioned earlier in this report, and Professor D. P. Mellor was appointed Dean of the Faculty of Science.

Alterations and building operations on the *School of Chemistry* buildings were completed during 1968, and the School expanded into these areas. Much needed space was gained thereby and, in particular, the number of tutorial rooms was increased and a departmental library established. Space was also found for a permanent exhibition of chemical models.

There was a welcome increase in the professorial staff of the School. The long-vacant Chair of Physical Chemistry and the new Chair of Analytical Chemistry were filled and a new Personal Professor appointed. In consequence, a considerable increase in the School's post-graduate teaching activities is envisaged. Enrolments were at capacity for the Postgraduate Diploma course in Food and Drug Analysis. Post-graduate courses were also held in food autoxidation and antioxidation, and in X-ray crystallography.

The first year course in Chemistry was modified by reducing the number of lectures given and increasing that of the tutorials, and by introducing experiments with models into the practical course.

The Seventh Summer School for senior teachers of chemistry was successfully held in January, 1968, with 57 high school teachers participating. It was devoted mainly to four important areas of chemistry: stoichiometry, equilibria, energy and stereo-chemistry.

For the *School of Physics* 1968 saw the first experience of the "post-Wyndham students" for whom several new first year courses had been designed. These were of two kinds: (a) special courses for students intending to do a minimum of two years of Physics and (b) several servicing courses for students doing less than two years of Physics. A completely new first year Physics laboratory course was designed and operated for these students. A large amount of tutorial and assignment work was organized to compensate students' lack of experience in "problem solving" at school.

1968 also saw the completion of proposals for the creation of unit structure in second and third year Physics in the Science course. The new ordinary and higher syllabuses for these units have also been written.

In the *School of Mathematics*, three first year courses were presented

in 1968. These were Higher Mathematics I, Mathematics I and Terminating Mathematics I. A slight variation in the usual pattern of annual examinations was introduced in conjunction with these courses. Students in Higher Mathematics I sat for two three-hour papers; those in Mathematics I for two two-hour papers and those in Terminating Mathematics for one three-hour paper.

The first Master's programme of formal course work in the Faculty of Science, that of Master of Statistics, was approved during the year. Its chief function will be to train graduates in Statistics in more advanced aspects of statistical theory and practice, generally while they are in employment as statisticians.

The *School of Applied Physics and Optometry*, as already mentioned, was constituted during 1968 as part of reorganization within the Faculty of Science. Incorporating the Department of Optometry which was formerly part of the School of Physics, it comprises also a new Department of Applied Physics. In the latter department it is intended to develop course work and research designed to promote the application of Physics, particularly in Australian industry.

A new building, largely to house the new School, should be erected during 1969 and it is intended to begin teaching in specific courses in Applied Physics in 1970. The Professor of Applied Physics is the head of the new School and the new Department.

Rules governing the award of the double degree of B.Sc.Optom. in the Faculty of Science have been approved and will operate from the beginning of the academic year in 1969. A formal graduate course in optometry leading to the degree of Master of Optometry (M.Optom.) has also been approved for implementation in 1970.

(b) The Board of Vocational Studies

Industrial Arts

Full-time enrolments in the Department of Industrial Arts increased during 1968 and students were enrolled for the degrees of Bachelor of Science, Bachelor of Science Technology, Master of Science, Doctor of Philosophy, and for the Graduate Diploma in Industrial Design.

In addition, students from the New South Wales College of Occupational Therapy were enrolled in Industrial Arts I and II, Freehand Drawing and for a special seminar. The Department is assisting the College of Occupational Therapy in the development of a Diploma course for Teachers of Occupational Therapy, all of whom are qualified occupational therapists and some of whom hold university degrees.

It is expected that there will be a further increase in first year enrolments in the full-time course in Industrial Arts because of the availability of a larger number of Teachers' Training College scholarships and the acceptance of the subject Industrial Arts for matriculation purposes.

The Graduate Diploma course in Industrial Design began on a part-time basis at the beginning of 1968 with an intake of 10 students. This number had been selected from 36 applicants and had been reduced from 12 because of inadequacy of funds. Donations totalling \$6,365

had been obtained from industry by the Industrial Design Council of Australia, and this included \$1,200 each from the Commonwealth Development Bank and the Rural Bank of New South Wales. Although it had been estimated that \$20,000 would be necessary for the establishment of the course, it was decided to make a start in 1968 with the funds available. Two scholarships were awarded and 10 more students will be admitted in 1969.

Bachelor of Science (Education)

The first year of a four-year Bachelor of Science (Education) degree course, B.Sc. (Ed.) begins next year. Designed primarily for the preparation of teachers of science in the secondary schools, it will also be of interest to those wishing to pursue careers in technical sales, administration and management in commerce, industry and public service. An interesting feature of the course is that the educational component is integrated into the course, so that the B.Sc. (Ed.) is the equivalent of the B.Sc. and a separate Diploma of Education.

The first year students will undertake a programme in Chemistry, Physics and Mathematics, with either Biology or Geology. The major areas of study in subsequent years are Chemistry, Physics, Biological Sciences and Geology, and at least one of these must be taken to three stages or more.

To provide balance, two stages of History and Philosophy of Science have been included in the course. This is regarded as an interesting development and one of the few efforts being made to provide for the needs of the teaching profession in the operation of the Wyndham Scheme.

Hospital Administration

A major change in the School of Hospital Administration courses was the conversion of the former Diploma to a Bachelor's degree course for which 85 students were enrolled. Fifteen students were registered for the Master's degree and there was one Ph.D. candidate. A second chair was established and in September Dr. George Palmer, formerly Reader in Economic Statistics at the University of Queensland, was appointed.

(c) The Department of General Studies

The University has, since its establishment, required all undergraduates in scientific, technological and engineering courses to undertake studies of a general educational character outside their particular field of study. In 1963 a Board of Studies in General Education was established to be responsible for courses in the humanities and social sciences for students in faculties other than Arts, and to foster other forms of general education such as courses in the fine arts, history and theory of music and drama.

In 1968 the second stage of the new general studies programme was implemented with the provision of tutorial classes in all Ordinary

Elective subjects. This arrangement will be extended to the fourth year Advanced Electives in 1969.

Up to the present, either English or An Introduction to Modern Drama has been a compulsory component of the general studies programme for students in all Faculties other than Commerce, but approval was given during 1968 for the removal of this restriction, commencing in 1969.

The relative popularity of the different subjects in 1968 can be seen from these enrolment figures:

<i>Subject</i>	<i>First Course</i>	<i>Advanced Course</i>	<i>Total</i>
English	835	51	886
Drama	30	...	30
Psychology	706	294	1,000
Economics	348	85	433
Music	148	18	166
History	271	67	338
Philosophy	237	25	262
Political Science	266	47	313
French Civilization	8	...	8
German Literature and Civilization... ..	5	...	5
Spanish and Spanish-American Literature	4	...	4
History of Fine Arts	141	...	141
History of Architecture	29	...	29
Totals	3,028	587	3,615

The students' choice of subjects will be widened in 1969 by the addition of Japanese and Cosmology.

Council in 1968 set up a Committee to make an assessment of the performance and achievements of the General Studies programme and the Committee has sought the assistance of the Tertiary Education Research Centre in planning the investigation.

The task confronting the Tertiary Education Research Centre is quite formidable. After preparing the schedule of investigation, there will be the drawing up of a series of questionnaires for completion by a variety of persons including students in the early stages of their general studies, students nearing completion of these studies, postgraduate students and alumni. The findings of the investigation will then be considered by the Committee and presented to Council.

(d) The Institute of Languages

The Institute of Languages commenced operations in January, 1968. A new SONY language laboratory of 30 booths and ancillary equipment was installed by A.W.A. Pty. Ltd. and was officially opened by His Excellency the Ambassador of Japan, Mr. Fumihiko Kai, in April, 1968, in the presence of the Chancellor, Sir John Clancy, who received the Ambassador on his arrival at the University.

Language courses in Russian, Japanese and French were established and teaching commenced on 3rd June, 1968 with an overall total of 77 students for the three languages. Three tutors joined the staff of the Institute to conduct these courses, which consist of lectures, tutorials and language laboratory periods, with emphasis on developing the ability to speak and understand the language primarily and to read and write the language as secondary consideration.

During the year, a decision was reached to offer Japanese as an elective subject in the General Studies programme in 1969, and plans were also prepared to include other languages, probably Indonesian, Chinese and German or Spanish in 1969 courses. It was also decided to conduct an intensive Japanese course in February, 1969, aimed mainly at students from business organizations. The demand for such training is growing daily and the Institute hopes to be in the forefront of this type of language presentation, based on practical and urgent requirements of commerce and industry.

During the third term an Automated Speed Reading Course was offered and enrolments very rapidly reached 45 students, all wishing to improve their reading ability. Most of these students are members of the teaching and non-academic staffs of the University.

Plans were completed to conduct a special remedial English course in 1969, aimed at those students whose mother tongue is not English and who usually have some difficulty in this regard. The Institute also hopes to initiate a language testing facility to determine standards reached in a number of languages, as well as aptitude testing to advise students of their language learning potential prior to enrolling for courses.

During the year the Institute screened a number of films dealing with language and linguistics and background information films on Japan, U.S.S.R. and France. These screenings were open to all those interested and attendances were most gratifying. A total of 90 films, representing 47 screening hours, was shown.

Work is to commence soon to provide extra facilities for language teaching and the preparation of tapes and material. A recording room, tape library, technicians workshop, as well as an audio-library are to be provided. In the centre of this complex a new language laboratory of 30 booths is to be installed, for use mainly by the language schools of the Faculty of Arts.

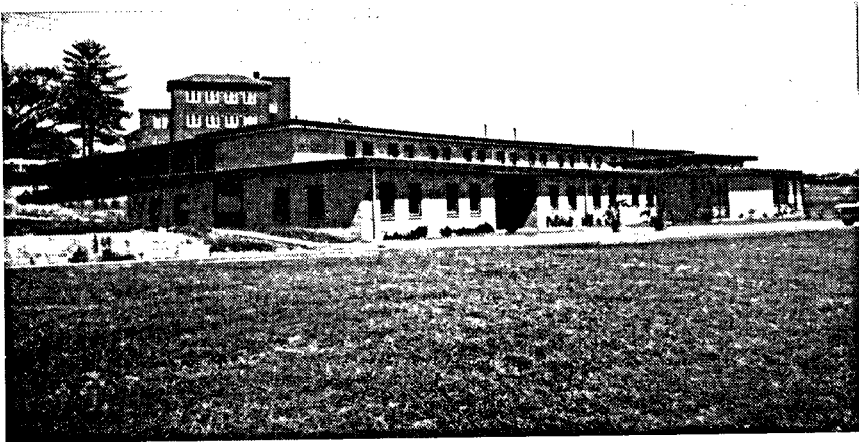

(e) The Institute of Marine Sciences

An Institute of Marine Sciences was established in 1968 within the University to co-ordinate and encourage the activities of the various Schools which are already engaged in work in this field. The Institute will also provide a means for the University to be represented at national and international discussions on the subjects of marine sciences generally. As this study is essentially of an inter-Faculty nature the establishment of the Institute is opportune.

The activities in this field within the University at present are con-

siderable. Six schools at Kensington and the Department of Mathematics at Wollongong are already engaged in various projects relating to marine sciences.

Members of the Council of the Institute are: Rear-Admiral O. H. Becher, R.A.N.; Captain A. H. Cooper, Hydrographer, R.A.N.; Professor V. T. Buchwald, Head, School of Mathematics; Professor P. T. Fink, Dean, Faculty of Engineering; Professor J. J. Frankel, Head, School of Applied Geology; Professor E. P. George, Head, School of Physics; Dr. G. Humphrey, Director, C.S.I.R.O., Division of Fisheries and Oceanography; Professor A. Keane, Head, Department of Mathematics, Wollongong University College; Mr. J. D. Langston, Director, Esso Standard Oil (Aust.) Ltd.; Professor J. A. Mabbutt, Head, School of Geography; Mr. R. Pryse Jones, Special Projects Manager, Gordon Edgell Pty. Ltd.; Professor B. J. Ralph, Dean, Faculty of Biological Sciences; Professor J. S. Ratcliffe, Professor of Chemical Engineering; Mr. J. M. Rayner, Director, Commonwealth Bureau of Mineral Resources.

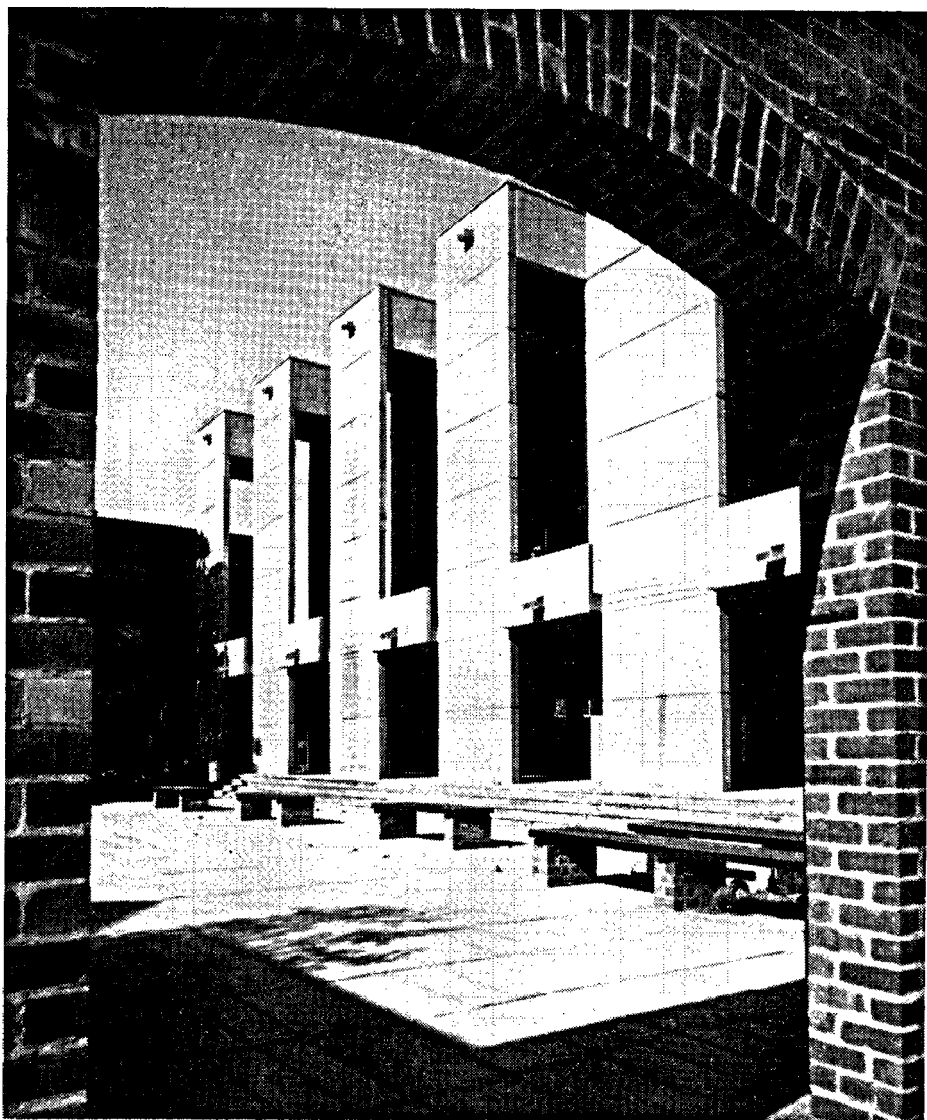

Institute of Administration, Residential Centre at Little Bay.

2.4 Extra-Mural Studies and Radio and Television Teaching

The principal bodies within the University involved in the area of extra-mural studies are the Division of Postgraduate Extension Studies, the Institute of Administration and the Postgraduate Committee in Medical Education.

(a) The Division of Postgraduate Extension Studies

This Division offers courses by radio and television, with associated seminars and laboratory work and attended courses at the University, which are organized in conjunction with the Schools of the University. In addition, a considerable number of students in country and Sydney

Entrance to Goldstein Hall.

metropolitan area are catered for by means of the tape correspondence service, whereby audio-tapes together with notes, are sent to groups of students.

In 1968 the Division offered a total of 31 radio and television courses involving 598 teaching hours and attracting 2,218 enrolments. A further 830 students participated in postgraduate extension courses by tape correspondence, 32 different courses being involved. In conjunction with the Schools approximately 10 attended courses were offered involving 1,000 teaching hours and 450 enrolments.

All these courses were at postgraduate level except five school-university bridging courses offered to intending first year students, before they started their university lectures. Total student enrolment in postgraduate radio and television courses was held at that of the previous year but the courses were larger in that the number of teaching hours was 22% higher than in 1967.

Six of the postgraduate extension radio and television courses—Accounting, Industrial Engineering, Person as a Transmitter and Receiver, Body in Communication, Instructional Film Production and Video Equipment—were taken for credit, as appropriate, in the Graduate Diploma in Industrial Engineering or the Graduate Diploma in Human Communication.

In addition to the above courses, the Division on behalf of the Faculty of Engineering arranged tuition in the other subjects of the Graduate Diploma in Human Communication. This is a six-term part-time course approximately half of which may be taken by radio and television, the remainder being laboratory, live lectures and tutorials and thesis work. The subjects offered in 1968 were the last four of the above six subjects, plus the attended subjects, Basic Information Theory, Radio and TV production, Teaching Method and Audio Equipment. This is the first time a course of this type has been offered in Australia; it is particularly appropriate to this University because of the contribution that can be made by particular Schools in the University and because of the facilities in audio-visual communication within the Division itself.

A number of other developments took place in the Division which will have a bearing on the presentation of courses. A 500 watt standby radio transmitter was installed at the University's station at Concord which can be arranged to work in parallel with the earlier 500 watt transmitter to provide a total power of 1,000 watts. A new TR 5 video tape recorder was installed to improve the quality of TV broadcasts which are now taking place regularly on at least one night per week. This facility, together with that of radio lectures receivable at home, or at work, helps professional people to take graduate courses for which they might not otherwise have the time.

A new ultra high frequency television transmitter which, together with the existing antenna, will be capable of radiating over 20 kilo watts, has been ordered and delivery is expected in February, 1969. When operating it will increase the power of Television University by a factor of one hundred. Television reception should then be possible over the

greater part of the metropolitan area north of a line from Kensington to Parramatta.

Of the 31 courses offered by radio and television, 20 were new courses ranging in subject from Medical School of the Air to computer programming, and this heavy production schedule was only made possible by the use of the specially developed lecturer-operated consoles for recording both radio and television tapes. Two of these courses were specifically designed for school teachers of the new Higher School Certificate syllabuses in mathematics and science at first, second and third levels.

The production of video-tapes for teaching first year classes was continued by the Closed Circuit Television Department in physics, general biology, mechanical technology, descriptive geometry, engineering drawing and social work. Experimental lectures in data processing have also been recorded on video-tape.

Wollongong University College has again been provided with recordings of the Physics, General Biology and Engineering I lectures and the service has been extended during the year to include Broken Hill and the Royal Australian Naval College at Jervis Bay. The C.C.T.V. studio has also been used to provide programmes for broadcast over the University's postgraduate TV network VITU.

(b) The Institute of Administration

On 24th June, 1968 operations were commenced at the Institute's Residential Centre at Little Bay. Delays in the completion of building work curtailed some proposed activities, but nevertheless a number of new courses were introduced during the year. Twelve residential courses and two part-time courses were conducted, involving 326 and 70 students respectively.

The basic educational programme of the Institute was maintained with courses in general management for business and government executives; administrative staff course for nominees from State and Commonwealth government departments, statutory authorities, local government and the Papua-New Guinea Service and a course in construction management designed for engineers in the industry. Courses in marketing, both residential and part-time, were again included in the year's programme together with the second residential seminar for magistrates from New South Wales and other States. The Institute also conducted three residential management courses for the N.S.W. Departments of Lands and Mines and a second advanced course for shop stewards from the Vehicle Builders' Employees' Federation of Australia.

The two new courses offered in 1968 were for senior officers of Australian and New Zealand railway systems and for insurance company executives. These programmes were concerned with various aspects of general management, but part of each programme was directed to specific areas appropriate to the organizations. Finally the Institute conducted a part-time course of eleven weeks in Administration for Surveyors.

The course in Higher Railways Management is now the longest residential course offered by the Institute; course members initially undertake a six weeks programme and subsequently return for a further two weeks.

In general the demand for courses has been consistent, particularly for the four week courses for executives and construction management and for the part-time (non-degree) evening course in marketing.

The majority of 1968 courses were conducted in the Residential Centre which was officially opened by the Premier, the Hon. R. W. Askin, M.L.A. on 29th November. The Centre comprises thirty-five single bedrooms with individual facilities; accommodation for a course director and a visiting lecturer; a manager's residence and meeting rooms, syndicate rooms, offices etc. designed specifically to cater for residential type courses.

The Centre is the most modern of its kind in Australia and interest in utilizing its facilities has been expressed by a number of organizations. These include the International Labour Organization, the N.S.W. Department of Public Health, the Commonwealth Department of Supply, the N.S.W. Credit Union League, the N.S.W. Medical Records Librarians' Association and Kembla Coal & Coke Pty. Ltd.

These organizations have all conducted training programmes at the Centre over various periods from weekends to three and a half weeks and in many cases members of the Institute's staff have been involved in the programmes.

(c) The Postgraduate Committee in Medical Education

During 1968, the Postgraduate Committee in Medical Education continued to expand and to diversify its activities, and courses were organized and held in Sydney and in country areas. Two very successful activities held at the University were week-end courses for general practitioners in paediatrics and human genetics.

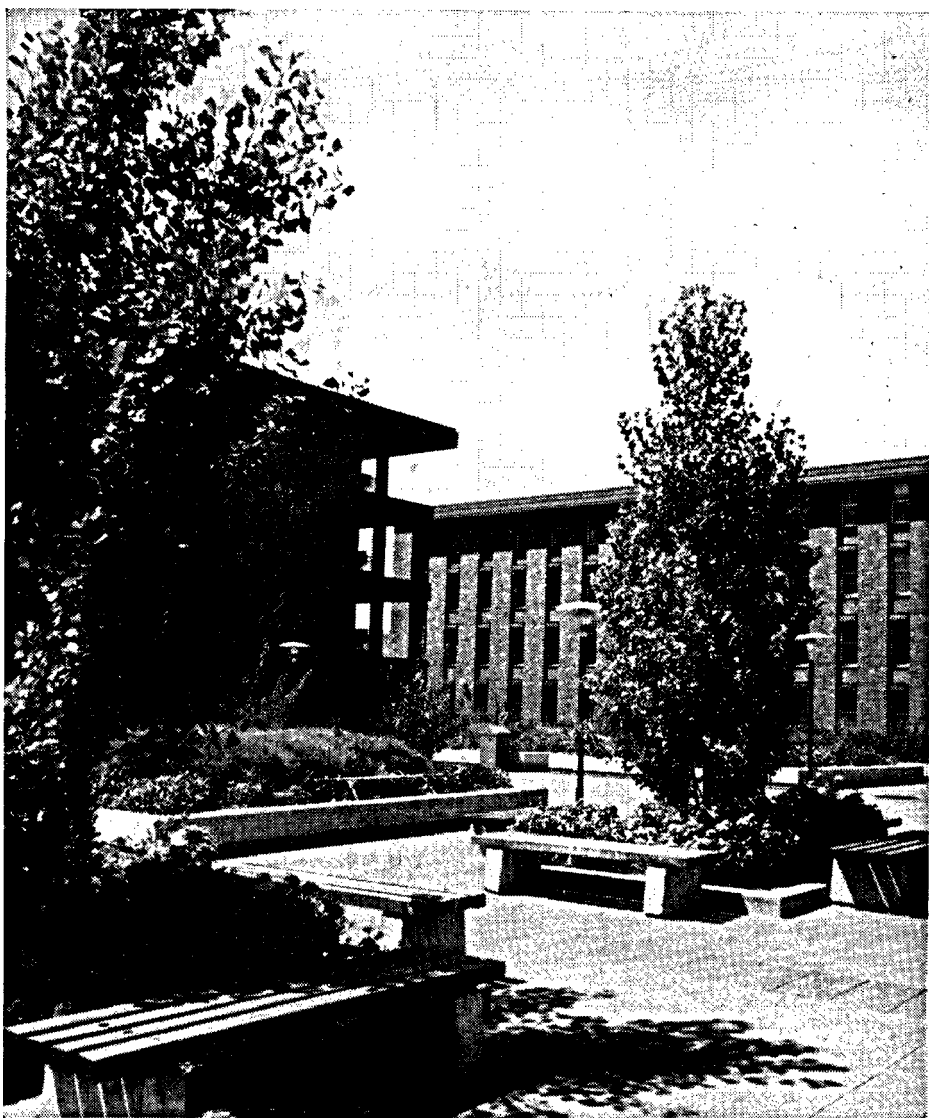

The Committee supported the reunion week at St. George Hospital when Dr. George Crile Jnr. of U.S.A. was the visiting surgeon and the week at Prince Henry Hospital when Mr. David Cole of New Zealand was the official visitor.

There were lectures at the University and at the hospitals from 20 overseas and interstate visitors and a series of lectures and conferences with two medical experts in nuclear medicine from the United States Atomic Energy Commission.

University and hospital staff continued to visit country centres for postgraduate meetings under the aegis of and through arrangements made by the Committee.

The Postgraduate Committee has taken over the organization of Medical School of the Air, which hitherto has been a service of the Division of Postgraduate Extension Studies.

The impact of the Committee on postgraduate medical education is becoming more apparent.

The Commerce Quadrangle.

2.5 The Tertiary Education Research Centre

During 1968 the name of the Educational Research Unit was changed to the Tertiary Education Research Centre and a new Director was appointed. Because of staff changes and absences through study leave and sick leave the activities of the Centre were considerably reduced during the year.

The closed circuit television service was transferred to the Division of Postgraduate Extension Studies at the beginning of 1968.

Educational Testing Centre

This Centre continues to provide a scoring and consultant service to the staff as well as pursuing research in the evaluation of university work. Examinations are increasingly being used by the academic staff to assess the effectiveness of their own lecturing and at the same time to provide a series of assessments of students' development as a result of a course of study rather than a single final examination.

In 1968, examinations in over 60 courses in the University involved an objective test processed by machine. These courses included all the first year classes with large numbers and were divided about equally between Arts and Science and included subjects from the first to the fourth year level. Objective type tests were used in tutorials, term and annual examinations.

The Centre acts as a catalyst in providing detailed data on the performance of good, average and poor students on each alternative offered in every question of an examination in order to contribute towards the improvement of teaching and examining. Advice on examining problems and test construction is also given.

Film Centre

The Film Centre, which has been reorganized and developed, continues to act as a clearing house, gathering and disseminating information on films suitable for tertiary education, to conduct appraisals of their suitability, and to arrange a staff borrowing service. A comprehensive system of film library cards is being set up using film catalogues and lists and this is cross referenced and indexed for all subjects. Films are regularly screened in the Centre's thetrette and projector borrowing and instruction services are conducted. All members of the academic staff have been circularized concerning the services, lists of films suitable for every School prepared, and 778 films have been obtained for use by lecturers.

Experimental Teaching Laboratory

This is equipped with language laboratory facilities, closed circuit television, teaching machines and audio-visual aids. It has been developed to handle studies of individual and group learning and teaching in topics in the Engineering and Physics courses. For this purpose carrels have been set up with two-way audio facilities and remote controlled visual equipment. A Marconi TV camera, with remote

control system, is available for studies of university teaching in their natural settings.

Teaching Aids

This section continues to provide a specialised photographic service to many departments of the University and gives assistance to the departments in an advisory capacity. It also conducts evaluations of teaching materials produced.

A number of 8mm. loops and some 16mm. films have been made to assist teaching programmes, and for use on television. Slides and prints have been produced for special projects within and outside the University and for the Centre's research programme.

3. Buildings and Grounds

3.1 Planning and Construction

With the exception of four projects at Kensington and a number of minor works, and three projects at the Wollongong University College, all building construction items approved are either completed or planning is well under way. The major problem encountered in those not yet commenced was the effect on costs of the metal trades award decision, and this led to cancellation of some minor projects and substantial replanning of some of the large ones. Details of the individual items are set out below:

Erection of Building for Faculty of Applied Sciences

Construction of this building commenced in May, 1967 and it was originally expected that it would be completed by November, 1968.

Delays have been experienced and it is now hoped that substantial areas will be in use at the commencement of first term, 1969. The building is Stage I of a two-stage project and will house the Schools of Geography, Applied Geology, Chemical Engineering and Chemical Technology.

Extension of Building "F" for Department of Textile Technology

Work on this building is proceeding satisfactorily and it is expected that it will be completed in May, 1969.

Alterations to Existing Buildings for School of Wool and Pastoral Sciences

Work has been completed on alterations to the first floor and in the tower of the former Electrical Engineering Project Building.

Erection of New Building for Faculties of Arts and Commerce

Additional accommodation for the Faculties of Arts and Commerce is being provided temporarily by an extension of the Chancellery. Work should be completed by April, 1968.

Provision of Structures Laboratory for School of Civil Engineering

Work has been completed on alterations to the former Electrical Engineering Repair Shop (formerly owned by the Department of Government Transport), at the Randwick Research Station. In addition to areas for the School of Civil Engineering, accommodation has also been provided for the School of Architecture and Building and for research in Entomology in the School of Zoology.

Department of Physical Education—Gymnasium

Plans for this project have been completed and it is expected that the building will be in use by August, 1969. The Sports Association has agreed to contribute \$102,000 towards the cost of this project.

Extension to University Union

Plans have been completed for Stage III of the Union extensions and it is expected that the building will be completed by the beginning of first term, 1970. It has been possible to construct a building of four stories as originally proposed following the provision by the Union of a substantial sum towards the cost of the building.

International House

The first students entered into occupation of this new building on 27th May, 1968 and the building was opened by His Excellency the Governor of New South Wales on 14th June, 1968. The building was made possible by substantial donations from Rotary International and the State and Commonwealth Governments.

Institute of Administration Residential Centre

The first course was commenced in the new building in the grounds of Prince Henry Hospital at Little Bay on 24th June, 1968 and the building was opened by the Hon. R. W. Askin, Premier of N.S.W., on 29th November, 1968.

Library Air Conditioning

This work was completed in 1968 and was facilitated by the fact that the building included a ventilation system designed for ready adaptation to air conditioning.

Staff Club

The provision of facilities for the Staff Club has been planned as part of the fourth floor of the north-south wing of the Electrical Engineering Building and will form part of the contract for the general extensions to this building. This should result in savings for both projects.

Child Minding Centre

After the original plan had been prepared, regulations administered by the Child Welfare Department were substantially amended and it was necessary to change completely the layout of the proposed Centre. The

funds for this building are being provided by the Students' Union and it is expected that the Centre will be in operation in March, 1970.

New Building for School of Physics

Allocation of space in this building had to be reconsidered after the division of the School of Physics into two new schools—a School of Physics and a School of Applied Physics and Optometry. It is hoped that the building will be ready for occupation at the commencement of classes in 1970.

Sir John Clancy Auditorium

This general purpose lecture theatre to seat 1,000 students will be located to the east of the new wing of the Chancellery. It is expected that the building will be occupied by classes at the commencement of 1970.

Sam Cracknell Sports Pavilion

The Sam Cracknell Sports Pavilion, adjacent to the University Oval, was completed during the year. The pavilion includes club, showers and change facilities and will serve as an adjunct to both the oval and the tennis courts.

David Phillips Sports Field

Plans were completed during the year for additional change rooms at the David Phillips field and these should be completed by mid-1970.

Room No. 200 on the Western Campus

Room No. 200 is being altered to provide a sloping floor theatre and it is expected that this will be completed by March, 1969.

School of Drama—National Institute of Dramatic Art— Erection of New Theatre

The first proposals have recently been received from the architects for a theatre to replace the existing Old Tote Theatre on its present site.

Alterations to the Heffron and Dalton Buildings for School of Chemistry

Work has been completed in these buildings and alterations provide additional laboratories in areas formerly occupied by the Library.

Completion of Building for School of Electrical Engineering

Plans have been completed for the addition of one floor to the north-south wing of the Electrical Engineering Building, as well as the erection of a lecture theatre to seat 300, north of the main wing. Provision has been made for facilities for the first stage of the Staff Club as part of the fourth floor and this will form part of the contract for the general extensions to this building.

Alterations to Biological Sciences Building

Alterations within the building, provision of an additional glass house and one additional animal holding room, have been completed.

Science Lecture Theatre: Air Conditioning

Planning for the conversion of the mechanical ventilation system in the Science Theatre to full air conditioning provides for the machinery to be moved from under the stage to below ground level outside the hall and for the further bracing of the air ducts so as to eliminate vibration. These steps should ensure absence of noise when the air conditioning plant is in operation. It is hoped that the new system will be in operation by April, 1969.

Broken Hill Division

Stage I of the development projects at the W. S. & L. B. Robinson College has been completed and it is expected that Priorities 1 and 2 of Stage II will be completed before the end of 1969. During the year donations were received from New Broken Hill Consolidated Limited (\$50,000), the Zinc Corporation Limited (\$50,000) and Broken Hill South Limited (\$25,000); the total advances made by the mining companies are now \$275,000 for this stage of development.

Wollongong University College

At Wollongong, extensions were completed to laboratories and workshops for the Departments of Electrical Engineering and Mechanical Engineering. Plans have been completed for the Arts-Commerce-Science Building, extensions to the Union Stage II and sports pavilion change rooms.

New Residential Colleges

The Anglican College, which is under the direction of the New University Colleges Council (Anglican), has been completed and will be receiving its first students early in 1969. The Rev. Noel Pollard has been appointed as the first Warden of the new college.

The final plans of Warrane College have been approved by the University at the request of the Education Development Association (Roman Catholic). It is expected that this building will be completed during 1970. The bricks to be used in this project will be identical with those used in the Anglican College to which it is immediately adjacent.

During the year the University was asked by Jewish organizations to agree to the establishment of a Jewish College affiliated with the University. The University agreed in principle to this request and supported an application to the New South Wales Government and to the Australian Universities Commission, which, if the application is approved, in accordance with their general policy would contribute to the financing of construction of the new college. The Council of the University has approved the location of the proposed Jewish Affiliated College on the Barker Street frontage of the Kensington Campus between the

main entrance gate and the proposed Child Mining Centre. It is expected that construction of the Jewish College will commence some time in 1970.

The proposal by the Y.M.C.A. at Wollongong to construct a residential college is being considered by the Australian Universities Commission as part of the University's submission for the 1970-72 triennium. The residential college will be located at North Wollongong adjacent to Illawarra House and will be within half a mile of the University campus. Full residential, tutorial and common room facilities will be incorporated in the building which will accommodate 81 University students and six resident tutors.

4. Field Stations

In many disciplines such as Wool and Pastoral Sciences, Botany, Zoology, Surveying, Geography, Water Engineering and Geology, paddocks become the laboratories in which controlled environmental conditions are produced and for this reason the University aims to have a series of field stations capable of providing a wide variety of facilities for teaching and research. For example, it is hoped that a station may ultimately be obtained in the Central West which would be available for providing residential accommodation and teaching for one complete year of the Wool Technology degree course conducted by the School of Wool and Pastoral Sciences.

The agricultural-type field stations of the University include the Fowler's Gap Arid Zone Research Station of 98,000 acres some 70 miles north of Broken Hill, the Wellington Field Station of 650 acres in the Central West, the Hay Field Station of 2,100 acres in the Riverina, and the Manildra Field Station of 150 acres in the Central West.

The biological field stations include an area at Cowan about 20 miles north of Sydney, coastal field stations at Smith Lake, 187 miles north of Sydney, and Durras Waters on the South Coast, and two marine biology areas in the grounds of Prince Henry Hospital at Little Bay.

4.1 *Fowler's Gap Arid Zone Research Station*

A considerable amount of research work was carried out during the year at Fowler's Gap. The School of Zoology in its kangaroo research programme investigated the age distribution, reproduction, variation, heat loading, and population distribution of red kangaroos and euros. Data on osmolarity of plasma and urine in kangaroos, the chromosomal basis of inter-sexuality in some marsupials, milk and plasma proteins, and hormones in blood, are also being collected.

The School of Geography in 1968 completed mapping of landform, soils and vegetation of the property, and began the setting up of representative plots and transects for specialized studies within the land-unit framework. A climatic station is under construction and, as a joint venture with the Department of Surveying, air photography and mapping

are being carried out. The University is particularly grateful to the Minister for Lands who provided the aircraft and equipment for this air photography.

The soil conservation Service of N.S.W., using the land-unit data of the School of Geography, applied a newly developed objective method of estimating grazing capacity at the station. It is interesting to note that the estimated optimum carrying capacity of the property turned out to coincide with current stock numbers.

The School of Wool and Pastoral Sciences conducted research in aspects of dust penetration of wool, whilst studies in salt intake and fertility of sheep are about to begin. Thirty miles of additional subdivision fencing were required for these projects.

A professional officer was appointed Officer-in-Charge of Fowler's Gap and will be responsible for servicing projects as well as supervising the station management.

Buildings and facilities erected in 1968 include a cottage for the Officer-in-Charge, a 30,000 cubic yard tank, subdivision fences, installation of a 25kVA. electric generating unit and several concrete stock water tanks.

Portion of the wool clip was once again used for student exercises at Kensington.

The Consultative Committee continued to function as a valuable advisory panel. It met twice during 1968, and the Operational Sub-Committee met on six occasions.

4.2 Wellington Field Station

Work on the development of Wellington Field Station progressed very satisfactorily during the year and projects in pasture establishment and utilization, livestock production, animal physiology, surveying and botany occasioned the use of the facilities of the station. The wool clip was again brought to Sydney and used for student training in Wool Technology.

During 1968 the following improvements were made:

- (a) The 45 acres of river flats were equipped with an underground mains spray irrigation system.
- (b) Lucerne was established on the river flats.
- (c) A cottage was erected for the station overseer.
- (d) Dry-land lucerne was established on 50 acres of hill country.
- (e) A sheep handling shed and laboratory was built.

A further area of 50 acres adjacent to the station was vested in the University by the Minister of Lands; the area was enclosed, and half of it sown down to lucerne.

The above developments were made possible by grants from the Australian Universities Commission and Unisearch Ltd. and the University is also particularly grateful to Wellington Shire Council for its continued interest and assistance.

4.3 Hay Field Station

In 1968 the Minister for Lands made available to the University 320 acres of a travelling stock reserve near Hay and 1,800 acres of the Hay Common. The University's tenure of land at Mulberrygong was brought to a conclusion on 31st December, 1968 and all stock and facilities were transferred to these newly acquired areas.

On the Hay Common area, much progress was made in the establishment of 400 acres of flood irrigated pastures, and subdivision of the area into five paddocks will shortly be completed. A further 50 small paddocks for single sheep joining and lambing are planned.

Current research programmes include sheep breeding for fleece weight production, and the development of high fertility Merino and Border Leicester flocks. A special study of drought feeding at various planes of nutrition is also in progress.

The University is assisted in these activities by grants of money or facilities from a considerable number of agencies and individuals.

4.4 Manildra Field Station

The Minister for Lands in 1968 completed negotiations to make available to the University 147 acres of the Manildra Common. This land, which is typical of much of the Central West wheat land, will be used almost exclusively for wheat cropping and extension studies.

Co-operative arrangements are being made with the Manildra Rural Youth Group which will be responsible for carrying out field trials designed by the University. The establishment and result of these trials will provide a unique extension medium, and it is proposed to attempt to evaluate the project as an extension programme as well as an agromomic exercise.

It is hoped that the trials will begin in 1969, but boundary fencing and clearing of the land must first be completed, and this cannot be started until the area is formally handed over to the University.

4.5 Cowan Field Station

The Cowan Field Station is located within the Sir Edward Hallstrom Faunal Reserve about 20 miles north of Sydney. It is operated by the School of Zoology which maintains a marsupial colony on the property and conducts associated research.

The academic staff undertaking research are supported by grants from the Australian Research Grants Committee and research work is also undertaken by Ph.D., M.Sc. and Honours students in Zoology. A small laboratory building was completed at the station in mid-1967.

4.6 Smith Lake and Durras Waters Field Stations

These areas are used by the School of Zoology and the School of Botany for research and teaching. On the north coast at Smith Lake, 187 miles from Sydney, facilities exist at the lake itself and on Big Island within the lake. The latter is a flora and fauna reserve under

the trusteeship of the University. There is a swamp area on Wallis Island in a large lake north of Smith Lake and not far away is Wallingat State Forest in which the schools have the use of 40 acres. At Smith Lake the School of Zoology has a small laboratory and store plus toilets and showers. Students of Zoology attend compulsory field camps and a Summer School in the area and live under canvas. The area has been carefully selected so as to provide a complete range of habitats from rain forest to eucalypt forest, sand dunes, rock platforms, brackish water in the lake, and fresh water swamps. A series of field investigations are presently being undertaken in these lake areas.

A similar development is planned in the Durras Waters area, south of Sydney. The University has been given a small area within the nearby Kialoa State Forest and a small area not far away on the coast. A limited amount of research work is being carried out at present in collaboration with the State Forestry Department. Apart from the value of having an area for studying the biological sciences on the south coast, the schools are conscious of the need to reserve unique areas for the future.

4.7 Fairbridge Farm

Negotiations with the trustees of the Fairbridge Farm at Molong for the acquisition of this property by the University failed to find a basis for agreement and have been discontinued for the time being.

5. Student Affairs

5.1 Students' Union

The Students' Union, which was established in 1952, is the central organization for the administration of student affairs and is the recognized means of communication between the student body and the University authorities, representing its members in matters affecting their interests. It also promotes the cultural, educational and recreational life of the University. Membership is compulsory for all registered students and the annual subscription is \$5.

The policy of the Students' Union is determined by the Students' Union Council which is composed of the elected representatives from all the Faculties. Day-to-day activities are conducted from its own office in the Union Extension Building, where in 1968 the staff consisted of an Administrative Secretary, three other full-time and three part-time employees. This staff was responsible for clerical duties and the carrying out of student services offered by the Students' Union.

Among the services offered in 1968 were free typing, duplicating, offset printing and secretarial work for recognized clubs and societies; ticket sales; counter sales of a variety of goods; distribution of publications from many different sources and the provision of general information.

Late in 1967 the Students' Union began a Casual and Vacation Employment Service and by November, 1968, 2,050 interested students had registered and over 500 jobs had been offered.

The Short Term Loan Programme of the Student's Union continued to be of great benefit to financially embarrassed students. Administered by the Deputy Registrar, Student Services, in 1968 the sum of \$1,759 was borrowed in 41 loans. The sum of \$411 is currently on loan and the balance of the original sum of \$1,250 is still available for distribution to needy students.

In first term 1968, the Students' Union opened their Secondhand Book Exchange. This will be run in the first term of every year. In 1968, over 7,000 books were handled by this service, which sells textbooks and reference books on behalf of students for a small charge. The service was heavily patronized in its first year of operation, and promises to be even more popular as its existence becomes more widely known.

In recent years, there had been a great deal of discussion as to whether there should be a nursery and kindergarten on campus. At the beginning of 1968, approaches were made to the University by the Students' Union for some assistance in the establishment of such a service. At that stage, all that could be offered was the use of the old Sport Pavilion, part of which was to be demolished to make way for Warrane College.

Since then, however, money has become available from Students' Activities Committee funds, and the University has agreed to start work on the building and landscaping involved. The Students' Union will control and run the Centre, to be called "The House at Pooh Corner", and will be responsible for any operational costs involved which are not covered by the fees to be charged. It is planned that the Centre will be operating from March, 1969.

The Students' Union was responsible for the conduct at the beginning of the academic year of Orientation Week which took the traditional form of seminars, concerts, exhibitions and informal functions with opportunities provided for most of the clubs and societies to interest incoming students.

The University's foundation was celebrated on the first Tuesday of July by a number of students' "stunts" and a procession; in 1968 students at this University collected \$3,700 to benefit the Co-operative for Aborigines Ltd.

Another beneficiary of active support from students was the Biafra Appeal, for which the Students' Union organized and financed a "walk" which brought in \$10,000.

On the cultural side, some activity was centred on the Dramatic Society but in addition to this a series of concerts—classical, jazz and pop—was held throughout the year and proved to be most popular with the student body.

The importance of student clubs and societies has long been recognized by the Students' Union and the fact that \$7,700 was set aside in 1968 for direct aid to officially recognized clubs and societies is some indication of this. Approximately 69 clubs and societies are now affiliated with the Students' Union, their interest ranging over the academic, the political, the social, the religious and the unclassifiable. These clubs meet a fundamental need for contact between students and form a basis

for much of the intellectual extra-curricular activity which makes a university environment unique.

Tharunka, the journal of the Students' Union, was in 1968 a creditable publication. Under the editorship of Paul Comrie-Thomson, the newspaper maintained a high standard of vigorous university news, reports and feature articles.

The other publication sponsored by the Students' Union in 1968 was the orientation magazine *Speer* which was of distinctive quality and favourably received.

The Students' Union is one of 17 constituent members of the National Union of Australian University Students. Affiliation with this organization enables the Students' Union to make contact with student affairs on national and international levels. This contact was aided in 1968 by the regular publication of the national student newspaper, *National U*. In general, students awareness of, and interest in, N.U.A.U.S. increased during the year through expanded activities in the fields of student welfare, aboriginal affairs, education and overseas student services. As well, the participation of the University of New South Wales members in such national programmes as overseas travel schemes, Papua and New Guinea work camps and United Nations seminars, is regarded as justification for expenditure on the membership of the National Union.

5.2 Student Service Amenities

The Amenities Service provides a housing service to students for board outside the University; represents the University in the operation of the various systems of student travel concessions and administers Sports Association policy.

During 1968 the service was able to assist many country and overseas students in obtaining suitable board. The number of enquirers for such accommodation was 716 but only 140 were known to be accommodated to their satisfaction. Many students fail to notify the service of their acceptance of accommodation and as a result this latter figure is probably well below those actually accommodated. There is a great need for more suitable accommodation to be offered in the way of (i) single rooms with cooking facilities and (ii) single rooms with full board. At present the University relies mainly on offers of accommodation received over the telephone in response to newspaper advertisements.

The University, through the Amenities Service, maintains a close and regular liaison with the Department of Government Transport and the Department of Railways, and in this way deals with the day-to-day problems of moving large numbers of students to and from the University by bus and train. In 1968, 2,978 bus passes were distributed compared with 2,814 in 1967.

Still the main activity of the Amenities Service is the implementation of Sports Association policy. Duties in this area expand as the number of constituent clubs increases. Since February, 1967, the day-to-day control of the squash courts has also been absorbed into the Amenities Service activities.

5.3 Sports Association

The Sports Association has now 28 constituent clubs, the latest addition being the Surfriders' Club. This is an increase of 23 since the Association's inception in 1952.

The year 1968 saw greater sporting facilities being provided, in the form of the Sam Cracknell Pavilion on the University Oval, for the tennis, cricket and hockey clubs, and a new Rifle Clubhouse at Long Bay. A new gymnasium is scheduled to be completed in 1969.

The Australian Rules Club won its way to the First Division, First Grade Sydney League Competition for 1969, by decisively winning this year's Second Grade grand final. This is the second occasion on which the club has won the premiership after having been in the grand final for the past four years. Other clubs to represent the University in First Division sport for 1968 were Rugby union, athletics, hockey and Baseball, none of which were premiership sides. As well, the Rugby League Club was promoted to Second Division which is the highest division an amateur club can attain in Sydney.

During the year, 9 women's and 21 men's teams competed in Intervarsity contests throughout Australia. New South Wales had its best year in recording five victories. These included women's sailing, women's badminton, women's table tennis, men's fencing and men's basketball.

Twenty-one sporting Blues were awarded in 1968, at the 12th Annual Blues Dinner when 225 guests attended. Test cricketer Brian Booth was the guest speaker and the Chancellor, Sir John Clancy, presented the Blues Certificates.

The squash courts have now been in operation for almost two years, with an ever-increasing demand on the courts by both staff and students. The second stage consisting of four more squash courts is urgently required. Since the courts have been opened the Squash Club has increased its grade teams from 10 in 1966 to 22 in 1968.

The Association regretted to see Mr. D. W. Crawford resign from his position as President of the Sports Association after so many years of faithful service. He did not, however, relinquish ties altogether and is still a member of the Sports Association Executive. In addition, the Association is appreciative of other voluntary contributions which are made by many members of staff on the various committees which are vital to the Association's functioning.

The Sports Association's Constitution was revised and approved by the University Council during the year and has now come into effect.

5.4 The Union

The University Union, founded in 1961 with the opening of "The Roundhouse" at Anzac Parade end of the campus, has been the social and recreational centre of the University since that time, providing a common meeting-ground for students and members of staff in its excellent facilities for the holding of dances, concerts, displays, debates and manifold University Club activities. It is much sought after as the venue

of social affairs connected with conferences, seminars and symposia held both during term, and more particularly, during vacation.

In addition, the Union provides many of the goods and services required by the University community through its catering, its stationery shop and the space it provides for two banks, a branch of a city store, a hairdresser and a pharmacy. It has become a trading enterprise of some considerable proportions.

Membership of the Union in 1968 was 15,631, including 2,356 life members. This may be compared with the 1961 membership of 6,885 to indicate the growth of the Union.

Similarly, trading turnover and other income sources, which in 1961 totalled \$228,000, rose to over \$1,000,000 in 1968. During the year the Union catered for well over two million customers.

So great has been the expansion in membership and activity of the Union that the second Union building which was opened in 1966 (and largely financed from the Union's own resources) has already proved inadequate for its needs.

The Union has therefore embarked on a development programme which will result in the erection of a third stage, a building of some 50,000 sq. ft. to cost in total some \$832,000, of which \$400,000 has been provided by the Government. It is expected that tenders for this work will be called early in 1968 and that the building will be ready for occupation in 1969.

As a complement to this project it is proposed to extend the existing kitchen and cafeteria facilities of the Union to provide 200% increase in the cafeteria space available for members. This work will cost \$280,000 and the first stage is to be built almost immediately. The whole project will be completed by first term 1970.

During the year the Union continued its policy of fostering social and cultural activities, arranging a series of concerts, art and photographic exhibitions, debates and formal dinners. The Union's Library of Recorded Music has continued to satisfy the heavy demands of members. The Union collection provides a representative selection of music of all ages and cultures from the earliest period to the present day. Where possible, the recordings demonstrate the contemporary style and instruments of the times of the various composers.

5.5 Student Health Service

The Student Health Service, which is located on the Kensington Campus, was inaugurated in October, 1962.

The motive behind the service is to meet a need in a more effective way than could be accomplished by resort to medical care through other agencies. It receives wide acceptance by the student body and not infrequently because of its many inherent advantages, students are referred hereby their family physician.

Diagnostic and in most instances therapeutic facilities are provided in the fields of physical, psychiatric, social and preventive medicine with access to consultant, X-ray and laboratory facilities at the Prince Henry

and Prince of Wales Hospitals. The Service is staffed by a full-time medical officer, nursing sister and a secretary.

Patients are seen by appointment, but due to increasing demands on the service, in many instances it is now no longer possible to see them on the day of their request for service except in the case of emergency.

The full effect of the increased enrolments in 1968 will not be felt by the Student Health Service until 1969 and subsequent years, since figures show that from and including 1964, first year students have used the Service least, the maximum usage over the past two years being in the third year of students' courses. With the prospects of additional medical assistance in 1969, the anticipated increase in demand should not constitute a problem and it should once again be possible to see students on the same day of their request.

The attendance figures for 1968 do not give a true indication of the demands now made on the Service, for owing to the illness of the Director for a period of twelve weeks from July to October, the Service was staffed by a medical officer on a part-time basis for only one to two hours per day. For the same reason comparison with 1967 figures would not be valid, but the latter are included for interest and are shown in parentheses.

Total attendances in 1968 were 6,483 (7,770), an increase of 197% (260%) on 1963, the first full year of operation. Of full-time students, 26.3% (29.5%) availed themselves of the service for reasons other than poliomyelitis immunization but only 5.0% (4.3%) of part-time students sought assistance. The overall attendance of all students enrolled at Kensington was 17.5% (18.5%).

The reasons for attendance were illness 3,092 (2,920), injury 383 (510), immunization 783 (1,627)—a total of 4,258 (5,057). Of these, 90.3% (93.0%) were treated at the centre, 5.6% (3.3%) were referred for specialist treatment; 3.3% (3.0%) were referred for treatment to their private doctor and 0.8% (0.7%) were referred for treatment to other places.

As in previous years, environmental hazards to persons working within the University were of particular concern. Each injury seen at the Student Health Service was assessed in terms of location, date and time of accident; activity at time of injury and cause and agent of injury; protective measures used and indicated; the nature of the act (relative to unsafe acts or conditions); time between injury and reporting for treatment; nature and anatomical site of injury and estimated disability.

The total injuries treated for the year were 383 (510) comprising 179 (229) injuries to students on campus; 66 (93) injuries to staff on campus; 130 (174) injuries to students off campus; nil (10) injuries to staff off campus; 8 (4) injuries to visitors to the campus.

Excluding all off-campus injuries and those attributable to sporting activities, by strict standards it was considered that carelessness or neglect were the main contributing factors in 64.8% (73%) of such accidents, 30.2% (24%) were regarded as unavoidable within reasonable limits and 5.0% (3%) due to unsafe conditions.

5.6 University Co-operative Bookshop

The chief objective of the University Co-operative Bookshop is to provide the necessary textbooks prescribed by the Schools of the University in the right quantities at the right time, so its busiest period is just prior to the beginning of first term. Appropriate mechanical handling methods enable rapid and efficient operation.

The majority of students and academic staff are shareholders in the bookshop and receive a rebate each year on the books purchased. A share costs \$5, remains valid for as long as the shareholder wishes and will be re-purchased by the Bookshop at any time.

The Bookshop in its new quarters beneath the Electrical Engineering Building is now centrally located to both the upper and the lower campus.

5.7 Student Counselling and Research Unit

Individual and Group Counselling

Individual counselling commitments in the Unit continued to increase in proportion to University enrolments and represent between 12% and 15% of the total enrolment at Kensington and about 25% of the new intake each year. The total number of clients interviewed during 1968 was 2,914 and the total interviewing hours were 5,336 compared with 2,249 interviewed and 4,383 hours respectively for the year 1967. A general tendency has been noticed over recent years for discussion to turn more and more to personal and emotional matters, personal crises, worries and planning problems, after the more immediate academic, vocational, financial and environmental concerns have been dealt with. Staffing improved during 1968 with the appointment of two experienced counsellors about mid-year and an assistant counsellor, and the Unit is now fully staffed. Three members have just completed Masters' degrees, one is proceeding to an M.Ed. and three are well advanced in their

Table 1

<i>Main Area of Assistance</i>	<i>Mentioned by client at first interview</i>		<i>Assessed by counsellor after each interview</i>	
	<i>1967</i>	<i>1968</i>	<i>1967</i>	<i>1968</i>

Totals	2,249 (= Number of clients)	2,914	4,383 (= Number of interview hours)	5,336

work for Ph.D. degrees. A senior counsellor was sponsored by the University on a three months' visit of observation to selected U.S.A. and Canadian universities' counselling services to study their day-to-day operation and their experiences in dealing with student unrest, the generation gap and improving staff-student, school-university and community-university liaison.

Table 1 indicates how consistently the matters of concern are distributed over the main problem areas raised by individual clients.

Group counselling commitments were more extensive in 1968 than in 1967, and with the staff appointments mentioned will be much heavier in 1969.

Table 2

6. The Graduates of the University

Graduate Statistics

- (a) In 1968 (February, April and May) there were ten graduation ceremonies held at Kensington when 104 (4)* higher degrees, 1,313 (270)* Bachelors' degrees and 245 (129)* graduate diplomas were conferred on graduates in the seven Faculties and the Board of Vocational Studies, and 7 (5)* undergraduate diplomas in Sociology were awarded. At these ceremonies two post-graduate diplomas were awarded for the first time at Kensington. These were:

Diploma in Polymer Technology Grad. Dip. 4 (0) graduates

Diploma in Process Chemical Engineering Grad. Dip. 4 (0) graduates

- (b) On 5th April, 1968, at the graduation ceremony at the Wollongong University College 8 (1)* higher degrees and 46 (8)* Bachelors' degrees were conferred.

* Figures in brackets are females and are included in totals.

- (c) On 11th July, 1968, at the graduation ceremony at Broken Hill 1 (0)* higher degree in Physics, 4 (0)* Bachelors' degrees in Mechanical Engineering, 1 (0)* in Mining Engineering and 3 (0)* in Science were conferred.
- (d) At ordinary meetings of the Council throughout the year it is the practice to award degrees *in absentia* to those students who complete examination requirements during the year and who prefer not to wait the next year's graduation ceremony. By this means 86 (4)* higher degrees and 13 (0)* Bachelors' degrees were conferred in 1968.
- (e) In all, a total of 199 (9)* higher degrees and 1,380 (278)* Bachelors' degrees were conferred during 1968, bringing the total number of Ph.D., Masters' and Bachelors' degrees conferred to 9,172. In addition 245 (129)* graduate diplomas and 7 (5)* undergraduate diplomas were awarded at the Kensington ceremonies in 1968.

Alumni Association

Over 400 alumni assembled in Unisearch House on 4th December, 1968 for the First General Meeting of the Alumni Association, which represents some 9,000 graduates and diplomates throughout the world.

After one year of operation the members of the Association showed great interest in the President's report, which indicated the progress which had been made in 1968, and in the proposed development of the activities of the Association.

The draft constitution presented by the first Board was most acceptable to all those present as it was seen to contain the aims and ideals expressed by the alumni at the inaugural meeting. A number of suggestions received subsequently were also incorporated into the constitution.

Projects discussed for 1969 included a variety of study programmes, a host family scheme involving hospitality for overseas students, an appeal to assist the Library of the University of Papua-New Guinea, and the Alumni Ball.

A report on the present interstate and overseas branches informed alumni of the need for the representation of the Association in other States and overseas countries. A report was also presented on the activities and development of the Australian Federation of University Graduates and delegates were nominated to the Third Annual Council Meeting to be held in Perth in January, 1969.

During the year the general elections to the first Alumni Association Board were held and the Board was constituted in accordance with the requirements of the Interim Constitution.

The following were elected: Mr. R. A. Corin, Miss T. F. M. Delanty, Dr. D. L. Ford, Mr. H. R. Harant, Associate Professor L. J. Lawrence, Mr. I. Lowe, Miss J. R. Milner, Associate Professor J. R. Norman, Dr. A. van der Poorten, and Mrs. H. van der Poorten.

* Figures in brackets are females and are included in totals.

These ten members now join Mr. R. D. Walker (Science) and Mr. J. J. Smith (Engineering), who were elected for one year by the 1968 graduates and postgraduate diplomates in their respective faculties.

Three overseas Board members were also elected. They are: Dr. A. Ekstrom (U.S.A.), Mr. G. W. Gore (U.K.), and Mr. K. P. K. Leong (Singapore).

The following office-bearers were subsequently elected by the Board: President: Mr. R. A. Corin; Vice-Presidents: Miss Jessica Milner and Dr. D. L. Ford; Hon. Secretary: Mr. D. D. Neilson; Hon. Treasurer: Professor R. A. Olsson.

10th Year Reunion

On Friday, 25th October, the ten-year reunion for approximately 101 alumni of 1958 and their wives was held at the University. A tour of points of interest was followed by a buffet dinner at which members of the staff from the same period joined the alumni.

Australian Federation of University Graduates

The second annual Council meeting of the Federation was held at the University from 20th to 22nd January, 1968. The opening address was delivered by Sir Philip Baxter and the keynote address on graduate involvement in the Australian community by Emeritus Professor A. G. Mitchell, Vice-Chancellor of Macquarie University. Mr. R. A. Corin, President of the University of New South Wales Alumni Association, is a Vice-President of the Federation and Mr. D. D. Neilson is the Executive Secretary.

Organizations representative of the Universities of Queensland, Newcastle, New South Wales, Monash, Melbourne, Adelaide, Western Australia, and the Northern Territory Graduates' Association were present, and accredited observers represented the University of Sydney, the Australian Council for Educational Research, World University Service, National Union of Australian University Students, Australian Federation of University Women, Indonesian Women Graduates' Association.

An education committee with members in each State was formed to consider matters of concern to graduates in the field of tertiary education in Australia.

The University of New South Wales Alumni Association lodged an application to join the Federation and was admitted.

The officers elected by the Federation Council were:

President: Mr. R. D. Nicholson, Convocation of the University of Western Australia. Vice-President: Mr. R. A. Corin, University of New South Wales Alumni Association. Vice-President: Mr. F. J. Mulrooney, Graduates' Union, University of Melbourne. Executive-Secretary: Mr. D. D. Neilson, University of New South Wales Alumni Association.

Graduates Club Pty. Ltd.

On 1st November, 1968, the Graduates Club occupied premises in Commonwealth Street, Sydney, which provide dining, refreshment and recreation facilities for members.

7. Scholarships, Benefactions and Grants

7.1 Scholarships

Of the 13,793 students enrolled in 1968 who were proceeding to a degree or diploma of the University, 1,630 were enrolled for higher degrees. The remaining 12,163 were proceeding to postgraduate diplomas or Bachelors' degrees.

The following tables show the numbers of those students who were receiving some form of financial assistance during the year:

Table 1—Assisted Students (Higher Degree)

<i>Particulars</i>	<i>Males</i>	<i>Females</i>	<i>Total</i>
Commonwealth Government Assistance ...	220	17	237
State Government Assistance ...	12	1	13
University Assistance ...	605	62	667
Other Assistance ...	35	2	37
Gross Total ...	872	82	954
Adjustment for students receiving assistance from more than one source ...	153	17	170
Net Total ...	719	65	784

Table 2—Assisted Students (Excluding Higher Degrees)

<i>Particulars</i>	<i>Males</i>	<i>Females</i>	<i>Total</i>
Commonwealth Government Assistance ...	2,201	517	2,718
State Government Assistance ...	1,089	761	1,850
University Assistance ...	1,334	954	2,288
Other Assistance ...	398	9	407
Gross Total ...	5,022	2,241	7,263
Adjustment for students receiving assistance from more than one source ...	808	790	1,598
Net Total ...	4,214	1,451	5,665

Of the total enrolment in higher degree courses, 48·1% were receiving financial assistance. 107 more higher degree students were receiving financial assistance in 1968 than in 1967 and the whole additional burden is in the form of University assistance. In fact there was a fall in the assistance available from other sources.

The percentage of assisted students in postgraduate diploma and undergraduate courses was 46·6. This figure is slightly less than that for 1967 (46·7) but the increased population would partly account for the decline.

Over the total postgraduate and undergraduate population 46·7% are assisted students. This compares with 46·9% of a smaller (12,069) population in 1967.

7.2 Benefactions, 1968

Council acknowledges with gratitude all benefactions received during 1968.

7.3 Grants

Commonwealth and State

Commonwealth Government grants to the University in 1968 totalled \$7,567,361, the details of which are given in section 9 of this Report dealing with the University's finances.

In addition, the Commonwealth is one of the major sources of support for postgraduate training through the Commonwealth Postgraduate Awards Scheme. The Federal grant for this purpose in 1968 was \$388,700. For this year 58 new awards were made; 111 were renewed for a further twelve months; while one was renewed but was current for less than half of the year. There was also one transfer from other universities. The Commonwealth grant for Postgraduate Research Awards for overseas students totalled \$14,714.

State Government grants to the University in 1968 totalled \$9,606,485.

During 1968 a total sum of \$291,994 was received for Australian Research Grants Committee projects, this amount being contributed by the Commonwealth Government. The State Government provided \$120,000 for special research.

Industrial

The University is indebted to the many commercial and industrial organizations whose grants, large and small, have contributed materially to the progress of the University during 1968. These grants, many of which are continuing, are referred to in greater detail in the section dealing with Benefactions and have been applied to a variety of purposes including scholarships, both graduate and undergraduate, prizes, the promotion of research, equipment, accommodation and cultural activities.

It is University policy to supplement where necessary privately endowed postgraduate scholarships, to make them equal in value to the stipends paid to students holding Commonwealth postgraduate and University postgraduate awards. This was done in four cases in 1968.

Australian Atomic Energy Commission

In addition to new grants totalling \$51,333 made by the Commission for the projects mentioned in Benefactions, a further amount of \$40,888 was available at the beginning of the year from previous grants. These were applied to projects concerned with:

- Proton analysis techniques
- Graft polymerization to fibres
- Preparation of uranium dioxide by direct hydrothermal reduction
- Investigation into insulation of enclosed cavities in which heat transfer occurs by natural convection
- Research in plasma electronics
- Study of irradiation effects in semiconductors
- An evaluation of the security of a radiation dose for post-harvest disinfestation of fruit against Queensland fruit fly

Creep of zirconium

The relationship between the sintering behaviour of ceramic oxide powders and their method of preparation

National Health and Medical Research Council

The National Health and Medical Research Council provided \$6,998 during 1968, this amount being a carry over from previous years' grants, plus \$83,561 in new grants referred to under Benefactions. Projects being carried out include:

Research on the relations between tonic and phasic spinal mechanisms in man and humoral control of cranial arteries in man.

Research in School of Anatomy—Professor M. J. Blunt

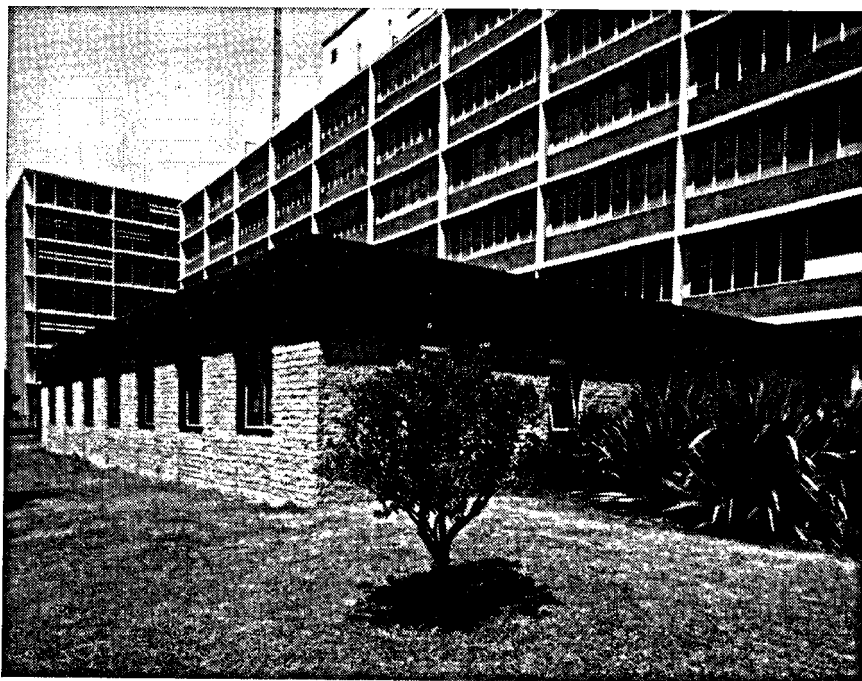

The inflammatory reaction to chemical injury.

Research in School of Physiology—Professor I. Darian-Smith

Human ecology of the arid zone.

Other Grants

Grants to the School of Applied Geology in 1968 for the purpose of marine geophysical research totalled \$33,900 in addition to the sum of \$32,413 carried over from previous years' grants.

The upper campus. The Biological Sciences building can be seen in the background (left). In the foreground is the Faculty of Medicine administrative block.

The Reserve Bank of Australia through its Rural Credits Development Fund grants, sponsored 21 projects concerned with research for the development of rural areas. At the beginning of 1968 the sum of \$51,716 was available to permit the continuation of these projects by the Schools of Chemistry, Civil Engineering, Wool and Pastoral Sciences, Botany, Microbiology, and at the Wollongong University College. For the 1968-69 financial year the bank made a further grant of \$33,500 for existing and new projects on variation of losses to storm run-off within catchment areas; processing of field data from rural catchments; investigation of the design and improvement of silt traps for farm dams and excavated tanks by the use of hydraulic models and other means; selection of high multiple births in Merino sheep; selection of Merino ewes which experience early fertile oestrus; production of wheat-alien monosomic lines; the influence of drying rate and rate of moisture on the physical properties of grain. The practice of the Reserve Bank in guaranteeing grants for the duration of certain projects has proved of immense value in the planning of research.

8. The University Library

The Robert Menzies Building, the first stage of the permanent University Library, was inspected by the Australian Universities Commission and the New South Wales Universities Board in 1968 to assess the need for increased accommodation and both bodies are expected to recommend construction of the second stage of the permanent University Library during the 1970-72 triennium.

Air conditioning equipment was installed in the Robert Menzies Building and began operation towards the end of the year. The intention is for this plant to maintain conditions of 66°-72°F and 50-60% relative humidity, conditions which are considered ideal for the conservation of books.

Discussions began in September with the University's data Processing Section on the production of a book-form central serial catalogue, the introduction of computer processing into the circulation system and other applications of automation.

At the beginning of the year the structure of the University Library was changed from three departments (Acquisition, Cataloguing and Reader Services), the Biomedical Library and the Water Research Library, to two Divisions as follows:

The Technical Services Division, composed of the Acquisition Department and the Cataloguing Department.

The Reader Services Division, consisting of the Reader Services Department, the Biomedical Library and the Water Research Library.

Mr. R. Z. Langker, formerly Head Cataloguer, was appointed Technical Services Librarian and Mr. J. C. Hazell, formerly Librarian of the N.S.W. State Office Block, was appointed Reader Services Librarian.

There were a number of appointments of new staff made, the

overall increase in full-time staff during 1968 being 18. The total number of full-time staff at the end of the year was 125. \$27,500 was spent on part-time staff in 1968, approximately \$10,000 on Technical Services and approximately \$17,500 on Reader Services.

Technical Services

Mr. A. Dobrovits was appointed Head Cataloguer, but the position of Assistant Librarian in Charge of Acquisitions remained vacant.

Monograph orders increased by 38% and monograph accessions by 20% compared with 1967. Since June, printed Library of Congress catalogue cards were supplied with new books by one bookseller and since September a second also has supplied similar cards with their books. In Monograph Acquisitions, 1968 was a year of heavy workload with fewer staff and larger expenditure targets.

Serial orders and new serials first accessioned decreased by 7% compared with 1967, but there was an increase of 8% in new serials first accessioned. New serial titles ordered were reported to the N.S.W. Book Resources Committee. There was a staff turnover of more than 50% in Serial Acquisitions. The Collection Maintenance Section added 2,500 volume of serials to the collection in January and February. Donations of monographs and serials were received from 139 donors.

Five new catalogue cabinets were acquired to accommodate the University Library's central card catalogue. There was an overall increase of 1% in cataloguing but serial cataloguing increased by 17%. The cataloguing backlog decreased, for the second time in succession, to c. 43,000. A Multilith offset printing machine was purchased to be used for multiplication of catalogue cards and a Lektriever, a mechanical filing cabinet, was ordered to be used for housing the shelflist. An IBM electric typewriter was purchased and a Cyrillic element was used on it to produce catalogue cards for publications in Russian. Editing of the author catalogue, which is now 17 years old, was begun.

Reader Services

Hours of opening were extended to the period from 8.30 a.m. to 11.30 p.m. in third terms.

The Reader Assistance Unit arranged displays, carried out literature searches, answered counter enquiries, conducted tours of the University Library, searched for missing periodical parts and showed enquirers how to use the University Library's catalogues. Students appeared to be appreciating more and more that they could obtain assistance from the Unit to receive individual or small-group instruction in library use as a prerequisite to their being issued with Research Library passes. Seminars were held on the literature of particular subjects. From third term assistance was available at night as well as in the day.

A course in scientific literature, organized by the Library Association of Australia and the National Lending Library for Science and Technology of the United Kingdom, was held in the University Library. Lists of research reports were prepared and circulated to relevant Schools and the bulletin called "University Library Developments and

Information" was issued to all academic staff. Discussions were held with the Schools of Electrical Engineering, Mechanical and Industrial Engineering and History on library use and to plan library-use projects.

The loan period for undergraduate loans was reduced from two weeks to one week except in the Biomedical Library. Staff and student loans increased by 30% over those for the corresponding months of 1967. Inter-library loans to other institutions increased 37% and those from other institutions decreased by 11%.

Forty-four lists of textbooks and reference books were processed for 1968 and fifty-nine other lists for prescribed reading were received in February and March. With very few exceptions all books for first term were available for student use on time. Increased use was made of closed reserve works.

A reader-printer for microfilm was installed. Xerox copying machines now number four and there are four coin-operated Coronastat machines and four coin-operated Olivetti copiers in the University Library and Biomedical Library.

The Biomedical Librarian, Dr. B. D. Foote, was appointed Convener of the Australian Advisory Council Bibliographical Services Committee on Medical Library Services. There was an increase of about 10% in staff and student loans from the Biomedical Library compared with 1967. The Biomedical Library received almost three times as many requests from other libraries for inter-library loans as it made to other libraries, and the total of intra-system requests from outside libraries was almost seven times as high as requests made by the Biomedical Library. The number of facsimile copies made in the Biomedical Library rose by 33%. Second year students in the Faculty of Medicine and the School (later the Faculty) of Biological Sciences were conducted on tours of the Biomedical Library and were given instruction in its use, in small groups of not more than eight. Medical students entering the clinical years of their course were given an introduction to bibliographic access to clinical medical information in a formal lecture by the Biomedical Librarian and Associate Professor Gandevia. A new information bulletin entitled: "Biomed: Biomedical Library Newsletter" began publication in September. Mr. A. A. Mehboob, from the Central Medical Research Library, Fiji School of Medicine, Suva, held a World Health Organization fellowship of one year's informal medical library internship in the Biomedical Library.

Teaching hospitals associated with the Faculty of Medicine now are: Prince Henry Hospital; Prince of Wales Hospital; Royal Hospital for Women; St. George Hospital; St. Vincent's Hospital; Lewisham General Hospital; Sutherland District Hospital; Canterbury District Hospital; Bankstown Hospital; Eastern Suburbs Hospital. Policy regarding an integrated library service involving the libraries of these hospitals is being developed.

The Water Research Foundation of Australia increased its grant to the Water Research Library from \$4,000 to \$5,000. This Library's exchange programme continued to expand although overall use of the Library was about the same as in 1967.

Staff

During the year, the University Librarian was appointed General Secretary of the Library Association of Australia and a member of the Standing Committee of the Australian Advisory Council on Bibliographical Services.

Staff changes not already mentioned were the resignation of Mr. J. L. Cummings, Assistant Librarian in Charge of Reader Services, to become Assistant Director of the Reader Services Division, State Library of Oregon, U.S.A. and the appointment of Mrs. Margaret Trask, Methods and Training Librarian, to the School of Librarianship as a temporary lecturer.

9. Finances of the University, 1968

This summary of the finances of the University is based on statements of accounts for 1968 submitted to the Auditor-General for audit prior to their transmission to the Minister for presentation to Parliament in accordance with Section 26 of the University of New South Wales Act, 1968. The audited statements of accounts bearing the certification of the Auditor-General will be presented separately.

During 1968 income received from all sources totalled \$22,505,192 while aggregate expenditure totalled \$24,216,772.

Income was received from the following sources, and comparison is made with 1967 and 1966 in amount and percentage of total:

Source of Income	1968		1967		1966	
	Amount	%	Amount	%	Amount	%
	\$		\$		\$	
1. <i>State Government Grants—</i>						
Recurrent Expenditure	7,970,613		7,268,684		6,577,723	
Schedule Projects	1,515,872		1,083,484		1,489,644	
General Research	120,000		120,000		133,000	
Australian Research Grants Com- mittee Projects		224,579	
Total	9,606,485	42·69	8,472,168	41·42	8,424,946	44·32
2. <i>Commonwealth Government Grants—</i>						
Recurrent Expenditure	5,748,000		5,247,000		4,832,000	
Schedule Projects	1,527,367		638,965		1,339,170	
General Research		133,000	
Australian Research Grants Com- mittee Projects	291,994		264,838		224,579	
Total	7,567,361	33·62	6,150,803	30·07	6,528,749	34·34
3. <i>Special Purposes Funds—</i>						
Research	1,316,770		1,291,138		973,614	
Scholarships, Prizes, etc.	116,132		70,553		71,979	
Other	835,142		1,702,626		363,233

Special Purposes—Other	3,066,844	3,911,795	2,861,774
State Government Non-Schedule Projects	76,181	76,369	89,254
State and Commonwealth Government Grants for Schedule Projects under State Grants (Universities) and Universities (Financial Assistance) Acts	512,107	704,292	858,663
Australian Research Grants Committee Projects	69,112	123,931	211,689
Total Funds	4,038,224	5,757,225	4,578,860

The excess of recurrent expenses over income during 1968 amounted to \$728,258. The balance of funds for recurrent purposes carried over from 1967 into 1968 amounted to \$322,570 of which \$18,400 was held in trust pending advice from the Hospitals Commission as to distribution to teaching hospitals. This meant that the 1967 balance available for recurrent expenses in 1968 was \$304,170. The application of this balance during 1968 reduced the excess of expenditure to a net deficiency of \$424,088.

Nineteen hundred and sixty-seven was an abnormal year in which considerable effort was made to conserve funds in anticipation of the substantial increases in commitments to be met in the second and third years of the triennium. This involved the expunction of several staffing positions on the University establishment as well as the curtailment of expenditure under some headings.

The deficiency in funds in 1968 has been brought about principally by increases in salaries payable under awards and agreements relating to non-academic staff, together with associated salary charges (payroll tax, employers' superannuation etc.) which arose from the following sources—

- (a) the carry-over effect into 1968 of Commonwealth Conciliation and Arbitration Commission decisions effective in 1967 in relations to the 2½% margins case, and the 1967 national wage case, and the decisions effective in 1968 arising from the metal trades award and the 1968 national wage case. In 1967 the expenditure involved was \$98,755 and in 1968 was \$230,563.
- (b) the effect of awards made by industrial tribunals relating to laboratory assistants/technicians etc. and building trades and maintenance staff. In 1967 expenditure under this heading was \$56,651 and in 1968 was \$119,577.
- (c) the effect of industrial agreements broadly based on public service rates for comparable staff. In 1967 expenditure under this heading amounted to \$19,735 and in 1968 to \$221,280.

- (d) the effect of other agreements or determinations made by the University. In 1967 expenditure amounted to \$9,286 and in 1968 amounted to \$23,604.

The total position is that in 1967 the costs of increases in non-academic staff salaries together with associated salary charges amounted to \$184,427 while in 1968 the amount involved was \$595,024.

There was also considerable increase in other items of expenditure during 1968, the main ones being repairs and maintenance of buildings and grounds and materials and minor plant. Expenditure in 1968 increased by \$153,551 and \$233,468 respectively over the 1967 expenditure for these items. The additional costs associated with the repairs and maintenance of buildings etc. were partly due to increased costs of maintenance works carried out by contractors, mainly arising from the metal trades award decision and the flow-through increasing the costs of materials, as well as the necessity to provide additional classroom accommodation and temporary academic staff accommodation pending the completion of new buildings. Increases in enrolments, particularly in the post-graduate area, together with the appointment of additional academic staff in 1968 resulted in increased costs in providing materials and minor plant for teaching and research purposes.

The operating income and expenditure (i.e. exclusive of income and expenditure on capital items—Universities (Financial Assistance) Act definition, Research Grants, Special Purposes, Schedule and Non-Schedule Building Projects and Equipment and Royal Military College, Duntroon) are shown below and compared with 1967 and 1966:

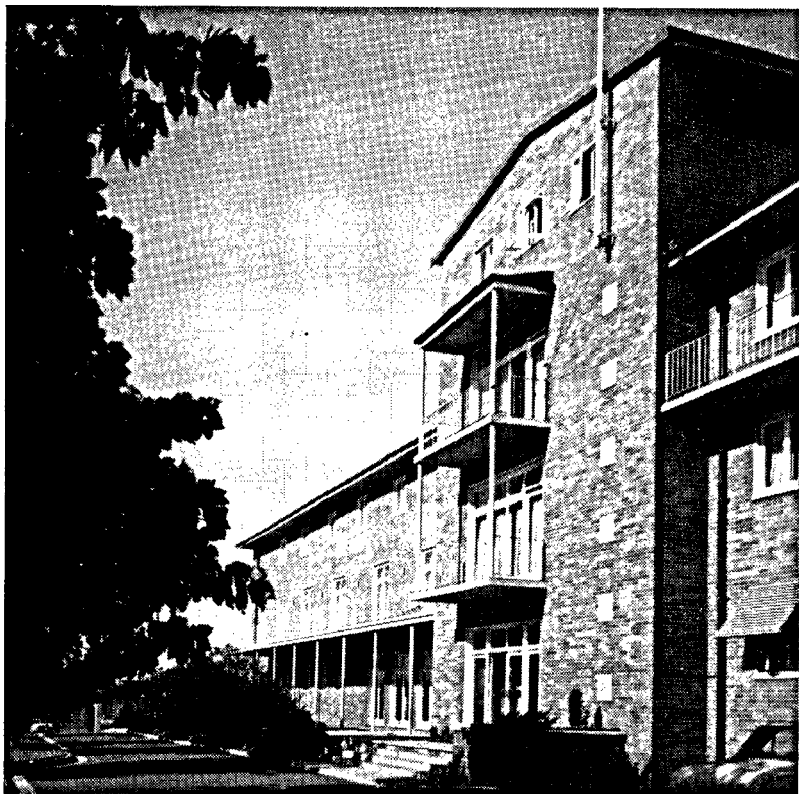

Income was received from the following sources:

Source of Income	1968		1967		1966	
	Amount	%	Amount	%	Amount	%
	\$		\$		\$	
1. State Govt. Consolidated Revenue Fund	7,970,613	47·84	7,268,684	47·69	6,577,723	47·07
2. Commonwealth Govt. Grants Recurrent	5,748,000	34·50	5,247,000	34·42	4,832,000	34·58
3. Students' Fees	2,690,387	16·15	2,474,616	16·24	2,412,437	17·26
4. Other General Income	251,170	1·51	251,698	1·65	152,086	1·09
Total Income	16,660,170	100·00	15,241,998	100·00	13,974,246	100·00

Expenditure was incurred as follows:

Expenditure Headings	1968		1967		1966	
	Amount	%	Amount	%	Amount	%
	\$		\$		\$	
1. Salaries and Staff Charges	13,408,672	77·11	11,600,935	77·72	10,837,356	77·68
2. Maintenance Expenses	2,845,166	16·36	2,344,930	15·71	2,353,296	16·87
3. Major Plant and Equipment, Furniture and Library	1,134,590	6·53	980,793	6·57	760,969	5·45
Total Expenditure	17,388,428	100·00	14,926,658	100·00	13,951,621	100·00

The charts which follow show as part of each \$1 of income, the amounts received from each source of income, and as a part of each \$1 of expenditure, the amounts expended on each purpose in respect of (1) the aggregate income and expenditure, and (2) the operating income and expenditure of the University for 1968.

Basser College.

10. Cultural and Social Activities

10.1 *Drama Foundation*

Dramatic activity at the University is considerable, and its scope, which includes the practice of professional theatre as well as academic and vocational training, is matched only in a few of the larger American universities.

The Drama Foundation was established in 1965 under the auspices of the Council of the University and in association with the Australian Elizabethan Theatre Trust. Its purpose is to promote and encourage the practice and study of the theatre arts in New South Wales, particularly through the drama organizations already existing at the University. The Foundation receives funds allocated by the Elizabethan Theatre Trust for the support of the National Institute of Dramatic Art, the Old Tote and Young Tote companies, and grants made available by the State Governments through the State Cultural Grants Committee for the commissioning of new Australian plays, for bursaries and grants to the students of the National Institute and for the production of documentary films. Grants from the Calouste-Gulbenkian Foundation of Lisbon and from the New South Wales State Government made possible a season of new Australian plays at the Old Tote Theatre beginning in February, 1968.

10.2 *The Old Tote Theatre Company*

The Old Tote Theatre Company, managed in 1969 by the National Institute of Dramatic Art, is a wholly professional company which presents annual seasons made up of classical plays and the best of modern writing. It was established in 1963 and by the end of 1968 24 major plays had been presented. The 1968 season was made up of a group of Australian plays—three of them new—a major production of *King Lear* which was presented first in Sydney, then in Brisbane and in New South Wales country districts, and Bernard Shaw's *You Never Can Tell*.

10.3 *The National Institute of Dramatic Art*

The National Institute of Dramatic Art, which is jointly sponsored by the University of New South Wales and the Australian Elizabethan Theatre Trust and is associated with the Australian Broadcasting Commission, has now been established for nine years at the University. The Institute offers two-year diploma courses in Acting and Production, as well as a post-diploma advanced course.

In 1968, 40 students were selected from the whole of Australia for the acting course, and nine for the production course. The first year students were given a broad training in every phase of the actor's craft—speech, movement, singing, acting technique and improvisation. Their studies also included History of the Theatre, English, Art Appreciation and Music. Over the year, a variety of plays were performed, including the *Hippolytus* of Euripides, and works by Pirandello, Ionesco, Pinter and Wilder.

Fourteen students were admitted to the second year course in acting, and four students to the second year production course. The production students worked closely with the Old Tote Theatre Company, and the acting students took part in the Sydney season of *King Lear* at Science Hall at the University. Regular instruction in radio acting was made possible by the generous co-operation of the University radio station 2UV. Students also took part in a full-scale television production in association with the Australian Broadcasting Commission. Second year students performed plays representing a variety of styles—Elizabethan, Restoration, musical and experimental.

Seven students were selected for the advanced course and were offered individual training in speech, singing, movement and acting, as well as wide participation in productions by the Old Tote Theatre Company.

In January, the Institute completed production of an historical documentary film entitled *Lagged*. The film is at present finding distribution amongst educational bodies, and has met with considerable success.

The Institute provided an entertainment for the Tenth Commonwealth Universities Congress in Science Hall. This involved the entire staff and students in the production of a play and a programme intended to demonstrate the training of actors.

In October, Mr. Tom Brown resigned as Director of the Institute and Mr. John Clark has been appointed as Director.

10.4 *The Young Tote Company*

Each year the Old Tote, in association with the Arts Council of Australia, sends out Young Tote companies. These companies (which had their origin in the Young Elizabethan Players) travel widely in New South Wales and Queensland, presenting programmes of Shakespeare, poetry, song and literature to schools.

Young Tote companies, in association with the Arts Council, toured extensively to schools all over New South Wales and Queensland.

10.5 *Other Activities*

Activities on the Kensington campus included a notable production of Benjamin Britten's opera *The Turn of the Screw*, and productions by DRAMSOC—the undergraduate drama society—of *Saved*, a contemporary play, and of Molière's *Tartuffe*, both directed by a third year student of the School of Drama.

10.6 *Music*

Three day classes and two evening classes were again provided in the basic elective course in Music in General Studies. In addition, an advanced elective was offered for the first time to students who had passed the examination for the basic course. Two lectures on "Nationalism in Culture" were again contributed to the Arts History I course and a series of lectures on music in the theatre were delivered to first year students in the School of Drama. Mr. Roger Covell, Senior Lecturer,

instituted a special course on music in seventeenth, eighteenth and nineteenth century drama for Drama Honours students. He also presented a new course, "Music in French Civilization", as a third year option for students in the School of French.

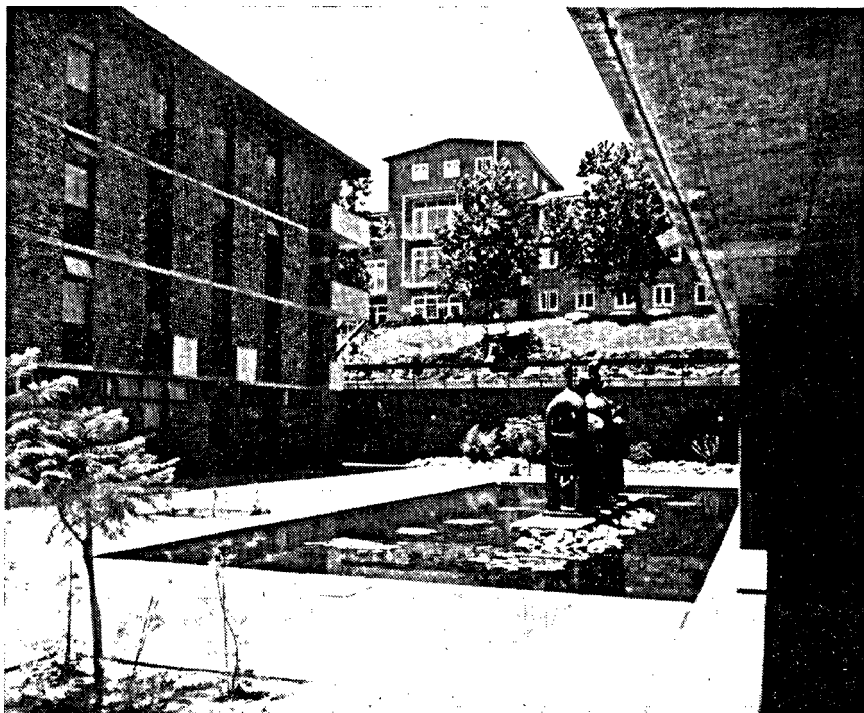

The University's Grainger Singers, who meet regularly in the lunch-time, contributed programmes to the Tuesday lunch-hour recitals in Science Hall. The University Consort also provided a lunch-hour programme of instrumental music by Bach, Telemann and other composers. The number of live performances in these recitals increased and included a concert by the A.B.C.'s Training Orchestra; a piano recital of works by Chopin; a programme including Mozart's quintet for piano and wind instruments and a recital of Spanish song and dance. The Director of the New South Wales Conservatorium, Mr. Joseph Post, O.B.E., readily made available some of his most outstanding students for a number of recitals. The Grainger Singers took part with a number of Sydney's leading smaller choirs in a programme celebrating the festival of the patron saint of music, St. Cecilia.

The Music Department continued to present, with the co-operation of Dr. Jean Wilhelm of the School of Drama, special musical documentaries, combining entertaining performances and an educational function, in the form pioneered in 1967. The first of this year's special programmes, which drew large audiences from within and outside the University to Science Hall, was in honour of the 100th anniversary of the death of Rossini, and included much unfamiliar music of Rossini's later years, some of which had never previously been performed in Sydney. The second programme commemorated the tercentenary of the birth of Couperin and again introduced music not previously heard here. The University presented the Rossini programme in association with the Dante Alighieri Society and the Couperin concert in association with the Alliance Française. The University's new two-manual harpsichord made its first public appearance in the Couperin programme and will be used extensively for performances and demonstrations of many kinds of music of the eighteenth century and earlier and for some twentieth century music.

The most ambitious of the University's musical ventures was the presentation of a modern chamber opera, Britten's *The Turn of the Screw*, for three performances at professional standards in Science Hall. Dr. Wilhelm produced the opera and Mr. Covell was its musical director and conductor, and the performance attracted remarkable praise in the press and elsewhere. Invitations to take the production to the Canberra Theatre in November and to the Perth Festival in February, 1969, had to be declined regretfully because of the unavailability of some of the singers. It is hoped that opera productions of works for small forces, and outside the likely repertory of the Australian Elizabethan Theatre Trust, will become a regular part of the University's musical programme, especially in view of the University's strong interest in drama through its School of Drama and the activities grouped under the University's Drama Foundation. The Music Department contributed

an original score to a film produced by the Drama Foundation. The University Choral Society gave its annual concert in Science Hall.

Research proceeded in several aspects of music in the theatre and in the musical-dramatic structure of seventeenth century opera. During the year Mr. Covell published a study of seventeenth century music for Shakespeare's *The Tempest* and presented a paper to the UNESCO seminar on criticism in the arts held in Sydney.

*Goldstein courtyard.
Basser College can be seen in the background.*

11. Residential Colleges

11.1 *Basser College—Goldstein College—Philip Baxter College— Post-graduate Hall*

The residential colleges and hall are governed by Kensington College Ltd., a limited company formed by the University for this purpose. The position of Managing Director is filled by the Master of Residential Colleges who is responsible to the Board of Kensington College Ltd. for all aspects of the management, control and conduct of all four colleges and halls.

The Master is assisted by a resident Warden and a number of tutors

in each college. This staff, which is composed of members of the academic staff of the University with status up to professorial level, has provided tutorial assistance in a wide range of subjects as follows: Architecture, Biochemistry, Biology, Chemistry, Economics, Engineering, English, French, Histology, History, History and Philosophy of Science, Mathematics, Pathology, Physics, Physiology, Psychology, Sociology, Statistics and Zoology. In addition the staff has been successful in making contact with the students at the personal level.

In the selection of students for 1968, an attempt was made to gain a cross section of academic interests and cultural backgrounds and the results of these efforts may be seen from the following tables, which present the situation as at 15th March, 1968.

Undergraduate Students in Residence—by Faculties

<i>Faculty</i>	<i>Men</i>	<i>Women</i>	<i>Total</i>
Applied Science	35	10	45
Architecture	23	1	24
Arts	13	87	100
Commerce	20	8	28

			Grand Total		<hr/> 454

The students manage many of their social and domestic affairs by means of elected House Committees. Informal parties and formal balls were held in each college and inter-college competitions in a variety of sporting and cultural activities were organized with considerable success. The Ruth Wheen Cup, the trophy for inter-college competition, was won in 1968 by Basser College.

The residents of the colleges were fortunate in 1968 to have the opportunity of meeting and talking with a number of visiting overseas and interstate academics, who, for the duration of their stay in New South Wales, resided in the colleges. In this way contact was made with visitors from the United States of America, Japan, Britain, Russia, India, Switzerland, Canada, Papua and New Guinea, and from all Australian States.

By continuing the policy of accepting a number of conference groups into residence during the vacation periods, the opportunity also was afforded the staff and students to make contact with a large number of people from many walks of life. A particularly interesting group was the Tenth Commonwealth Universities Congress for which more than 200 delegates and their wives resided in the colleges for two weeks in August, this being an association which was most stimulating.

Students will take up residence early in 1969 in the new Anglican College which faces Anzac Parade.

11.2 New Residential Colleges

New College, the Anglican residential college being constructed on behalf of the New University Colleges' Council, is completed and will be ready to receive students in the first term of 1969. Facing Anzac Parade, it provides accommodation for 210 students each with a study bedroom on three floors above a ground floor, which contains communal facilities and quarters for master, vice-master, and matron.

Construction will begin in January, 1969 of Warrane College, the affiliated residential college for men being established by the Catholic

association, Opus Dei, and which will be located at the corner of Barker Street and Anzac Parade. Accommodation will be provided for 200 students.

Eight storeys in height, it will consist of a two-storey base surmounted on the Anzac Parade side by a six-storey residential block. The ground and first floors will be arranged in the shape of a rectangle around an interior courtyard, and will contain the major common facilities: chapel, dining room, library and common room. Each of the upper six floors will accommodate 33 students and two tutors, all in single rooms. The expected opening date is first term, 1970.

11.3 *International House*

A much-desired objective was achieved on 14th June 1968, by the opening of International House at the University of New South Wales by the Governor, Sir Roden Cutler.

It was almost ten years ago that the suggestion for an International House in Sydney was put forward and the first organized meeting was held in October, 1958. Some leading members of Rotary became interested in the proposal and undertook to raise \$400,000 to be shared between the University of Sydney and the University of New South Wales. It was appropriate therefore that Mr. G. W. Harman and Mr. C. F. T. Jackson, District Governors of Rotary Districts 268 and 275, respectively, were seated on the dais at the opening ceremony. Sir Bernard Freeman, C.B.E., Chairman of Trustees of the Appeal, was overseas.

The building of International House at the University of New South Wales cost approximately \$600,000, of which \$200,000 was provided by Rotary, \$200,000 by the Commonwealth Government and \$200,000 by the State Government.

This building, which is the first stage of International House, provides accommodation for 116 residents (104 students, eight tutors, warden, assistant warden and two guests). About half of these are Australians, the remainder representing various nationalities, African (Kenyan), American, Canadian, Ceylonese, Chinese, Fijian, Indonesian, Indian, Japanese, Korean, Lebanese, Malaysian, Norwegian, Pakistani, Singaporean and Thai. The large majority of these men and women residents are studying at postgraduate level. The second stage of the building will accommodate another 70.

Earlier in 1968 the University Council had nominated Professor A. H. Willis as a Director of International House Limited and subsequently the Board of Directors invited Professor Willis to become Warden of International House. Mr. Murray Gosper, O.B.E., became Chairman of the Board of Directors, replacing Mr. C. E. C. Nicholls who is overseas.

Miss Helen Adorjan, the Assistant Warden, took up duty on 8th January and is responsible to the Warden for the day-to-day running of the House.

The House has greatly benefited by donations from the University

U-Ball Committee totalling \$16,641 which have been used for furnishings and amenities.

The students have formed their own society which has arranged social and sporting activities for the residents of the House, and there has been some inter-collegiate competition.

12. Administration

12.1 *The Council*

During the year 1968, Council met on six occasions for the formal transaction of business.

There were three changes in the membership of Council. Mr. M. P. McCarney was appointed a member of Council as the nominee of the Labor Council of New South Wales to replace the late Hon. J. D. Kenny. Professor H. N. Barber was appointed to Council upon his election as Chairman of the Professorial Board, this position having become vacant following the resignation of Professor R. E. Vowels from the chairmanship consequent upon his appointment as a Pro-Vice-Chancellor. In December, the University was informed that Mr. H. L. Yelland, Deputy Director-General of Education, was being appointed to Council in view of the resignation of Dr. H. S. Wyndham to coincide with his retirement from the office of Director-General of Education.

New University Act

The new University of New South Wales Act, 1968, was passed by Parliament, and received the assent of the Governor. It will come into force on the date appointed by the latter, 1st January, 1969.

The principal changes in the new Act are contained in Sections 8, 14, 18, 21 and 33.

Section 8 provides for the membership of the reconstituted Council to take office from 1st July, 1969. Members are now classified as parliamentary, official, elected or nominated, the official members comprising the Vice-Chancellor and Chairman of the Professorial Board, but may also include a Chancellor appointed by Council from outside its number.

The section makes a minor reconstitution of the Council, of which total membership remains at 40 (with the possible addition of a Chancellor) by eliminating the previous requirements that two of the members shall be officers under the Public Service Act who are closely associated with technical education, and one of its members shall be a nominee of the Senate of the University of Sydney.

Such members will be replaced by increasing the number of members appointed by the Minister by two and the number representing the professions by one. Under this section parliamentary members will remain members of Council until replaced and official members while they retain the office by virtue of which they have become members. Elected and nominated members will have a term stipulated by Regulation, but not exceeding four years.

Section 14 relates to the power of Council in respect of the provision of courses, the making of awards, the employment of staff and the management and control of affairs, concerns and property. It is substantially a restatement of the previous Section 25.

Section 18 is an amplification of the previous Section 29 and widens Council's powers with respect to the establishment of halls of residence, affiliated colleges and student hostels.

Section 21 is essentially a restatement of the previous Section 32 but the scope of the special investigations, in conformity with the University's wider field of activities, is no longer restricted to technology and science.

Section 33 provides for an amendment of the Superannuation Act to bring the University Act into line with those of other universities by allowing professors, on appointment, to elect to contribute either to the State Superannuation Fund or to a University pension scheme.

Honour to Member of Council

Sir John Goodsell who was created Knight Bachelor in the 1968 Birthday Honours, has been a member of the University Council since 1953 and for thirteen years has been Chairman of the Finance sub-committee of the Executive Committee of Council and a member of the Executive Committee and of the Personnel sub-committee.

Sir John succeeded the late Mr. Wallace Wurth as Chairman of the N.S.W. Public Service Board in 1960 and has had a distinguished career in many aspects of public service.

World-wide Student Unrest

The year 1968 was marked around the world by many demonstrations, marches, sit-ins and in some cases open riots, in which students were involved. Many of these, such as those in Germany, France, Japan, United States and even Great Britain led to violence, personal injury and serious interference with the work of the educational institutions involved. For example, the University of Tokyo, probably the leading centre of scholarship and learning in the East, was closed for many months and suffered serious damage to its library and other facilities. The Sorbonne, the London School of Economics, Columbia and other American universities have suffered similar, if not so destructive, effects.

Australia has escaped these extreme examples of unrest, but there has been a considerable quickening of the pulse of student interest, both in world and national affairs, and in the internal affairs of universities. In their present non-violent forms, these activities are beneficial, and show the developing maturity and interest of students.

In the University of New South Wales, contacts between the administrative and academic staffs and the students have been made closer. Student dissatisfaction with some aspects of courses and teaching methods has been clearly expressed. Machinery has been established for regular discussion of these matters, resulting in the closer involve-

ment of students in the preparation of data upon which decisions will be made.

This process is expected to develop during 1969 and to make worthwhile contribution to the teaching efficiency of this University.

Broken Hill Graduation Ceremony

The third graduation ceremony for W. S. and L. B. Robinson University College at Broken Hill was held on Thursday, 11th July, when the Chancellor admitted to degrees nine graduates in the faculties of Science, Applied Science and Engineering. For the first time, the degree of Master of Science was awarded at such a ceremony, the recipient being Mr. G. S. Shell.

The Occasional Address was delivered by Mr. M. L. Baillieu, Chairman of Directors, North Broken Hill Limited.

After the ceremony in the Broken Hill Town Hall, which was attended by a large number of parents and friends of the graduates and leading members of the Broken Hill community, the congregation moved to the University College where Sir Maurice Mawby, Chairman of Conzinc Riontinto of Australia Ltd. unveiled portraits of the late W. S. Robinson and his son, the late L. B. Robinson, in whose memory the University College is named.

The University has recorded on earlier occasions its appreciation of the generosity with which the mining companies at Broken Hill have contributed funds towards the establishment of the W. S. and L. B. Robinson University College and it is pleasing to note that the State Government has provided funds to support these contributions.

It is gratifying to report that the University continues to receive donations towards the development of the College. In 1968 the Zinc Corporation Ltd. and New Broken Hill Consolidated Ltd. each made further contributions of \$50,000 towards the cost of the College and Broken Hill South Ltd. made a donation of \$25,000.

Visiting Committees

In 1968, Council decided to replace the system of Advisory Panels with a system of Visiting Committees and considerable interest was evinced throughout the University in the proposal.

The purpose of the Visiting Committees will be to appraise the educational programmes of the various Schools in relation to the needs of industry and professional practice, to receive and discuss the annual report of the Head of the School, to report to the Council on the special problems facing the School and to aid the development of the School in any way possible. Each Committee will consist of a Pro-Vice-Chancellor as Chairman, up to ten members nominated by the Vice-Chancellor from appropriate sections of industry and the professions, the Dean of the Faculty, the Professors in the School and three members of the University of New South Wales Alumni Association.

A special feature of the activities of the Visiting Committees will be that they will meet in the relevant schools and in conjunction with these meetings will actually visit the schools to familiarize themselves with staff, equipment, research programmes and so forth.

12.2 Radiation Protection

The wide range of teaching and research projects involving the use of ionizing radiation led to the establishment of a radiation protection service in 1961. The number of staff members licensed to use radioactive materials and irradiating apparatus now totals 61. During 1968, 130 items of radioactive material and an X-ray diffraction unit were received.

A detailed assessment of the design of a high-activity irradiation facility was conducted. Monitoring surveys of various items of equipment were performed to complement personnel monitoring procedures and to confirm radiation safety assessments carried out in the planning stages. Active waste is being stored in a central facility whilst awaiting bulk disposal. Separate arrangements operate for the disposal of low-level putrescent waste.

A personal radiation record for each radiation worker has been introduced, and the medical examination programme has now been instituted.

A member of the University has been appointed to deputize during absences of the Radiation Protection Officer.

It is pleasing to report that no significant radiation incidents occurred during the year. Insurance cover against personal radiation injury was renewed. A copy of the Kensington campus radiation facility site plan was issued to the two servicing fire brigade stations.

Liaison is maintained with those responsible for radiation safety in the University's teaching hospitals.

13. Archives

Progress has continued to be made with University archives during 1968. However, the difficulties attendant on securing documents and other materials vital to a perfect collection, have been demonstrated even in the comparatively short history of the University, now on the eve of its twentieth year of existence.

This is particularly shown in the case of ephemeral announcements, leaflets, and posters charting the day-to-day events of a university community. Nevertheless a worthwhile collection is being made and historians of the future should find sufficient material on which to base their statements and conclusions regarding the trends of events in the second university to be founded in New South Wales.

14. Unisearch Ltd.

Unisearch Ltd. completed 1,008 industrial projects during the 1968 academic year. The members of the academic staff of the University and of the technical staff working under their supervision, who participated in the Unisearch investigations for industry, continued to give outstanding service in the solution of the complex problems brought to

the attention of Unisearch. Investigations were undertaken not only for industry and governmental and semi-governmental authorities in New South Wales, but also for organizations in the other Australian States, Papua-New Guinea, New Zealand, Thailand, Malaya and Singapore.

Because of the confidential nature of the work carried out by Unisearch for its clients, it is not possible to refer in detail to the investigations completed in the past year, but reference to the following projects will serve to illustrate the broad field of Unisearch activities.

A research contract was undertaken on the electrolysis of zinc and lead ores for one of the leading mining companies in Australia and a considerable number of investigations were carried out for other organizations on mining problems and the beneficiation of ores, and in connection with the washability of coal for export to Japan. Problems encountered in oil and alumina refineries and thermal power stations were investigated. Research projects also were undertaken for the food industry, these relating particularly to the development of products for the export market.

Unisearch Ltd. is also participating in an Urban Renewal and Development Study for the Island of Singapore sponsored by the United Nations Organization and awarded, against international competition, to the Sydney firm of consulting engineers, Crooks, Michell, Peacock & Stewart. The Unisearch contribution is the conduct of a traffic survey of the Singapore Island which will require four years of work, mainly done in the long vacations, by Professor W. R. Blunden, Head of the School of Traffic Engineering, and members of his staff.

A substantial project is continuing for two Sydney municipal councils to overcome the lack of information and technical details in Australia concerning the fuel value of various kinds of readily combustible refuse, the amount of fuel required to burn other types of refuse and the design of incinerators for different requirements.

An interesting Unisearch project for the Northern Territory Administration is proceeding under the supervision of Associate Professor L. M. Haynes, Head of the University's Department of Industrial Arts. This project relates to the teaching of pottery-making to Australian aborigines as an added skill to the ethnic skills for which they are famous. A large specially designed pottery kiln was shipped to Darwin and set up there by officers of the Department of Industrial Arts. It has been found also that a danger exists that the centuries old arts and craft techniques previously passed on by the old men of the tribe to the children could be lost because of the compulsory attendance of the children at school.

A second Unisearch project is now proceeding concurrently with this project, which involves placing the existing techniques and skills on permanent film and tape record and also aiding the tribal elders to learn methods of imparting their knowledge to groups of aboriginal children in classes. Unisearch is glad to be associated with these projects so very important from the national point of view and its help is being given without any profit motive.

The fourth Unisearch "Using Computers" course for higher management in industry was conducted during the period May to November.

This course provides senior executives in industry with sufficient knowledge about computers and their value to industry to enable them to make wise policy decisions on the use of computers in accordance with the needs of their own organizations.

From 12th to 16th February, Unisearch Ltd. made available at the University an intensive course in Natural Gas Engineering which was attended by 40 senior technical men engaged in oil and gas exploration work in Australia and by governmental and industrial personnel who will be involved in the storage and the pipelining of natural gas to the main centres of population in this country. The principal lecturer was Professor M. R. Tek of the University of Michigan, who is a world authority on natural gas.

A course conducted by Unisearch consultants commenced in March, dealing with design, analysis and relevant drawing practice for engineers and draughtsmen, which was followed by an appreciation course for workshop personnel working from the drawings prepared by draughtsmen utilizing the principles covered in the first course. A feature of both these courses is that they are being given in their entirety within the factory premises of the large electrical industry concerned.

As at 31st March, 1968, Unisearch Ltd. was administering 45 inventions arising out of the work of the University and during the year under review five agreements were entered into for the licensing of Unisearch inventions in connection with their industrial exploitation. Assistance was given to many inventors requiring the evaluation, further development and commercial exploitation of inventions in which they were interested. The latter service, which is now expanding considerably, does not provide a financial return commensurate with the service given, but it could prove to be of considerable benefit in encouraging innovation in Australian industry.

Three grants from Unisearch funds amounting to \$13,274 were made towards meeting the expenses of the early years of development of the University's Agricultural Research Station at Wellington in western N.S.W. These were the final payments of a total Unisearch grant of \$24,000 made during the past two years to enable the University Schools of Civil Engineering, Mechanical and Industrial Engineering and Wool and Pastoral Sciences to commence projects at the Research Station before financial assistance from other sources became available. Other grants were made for the purchase of research equipment required for use in the University Schools of Chemistry, Civil Engineering, Mechanical and Industrial Engineering and Metallurgy.

15. New South Wales University Press Limited

The Press, which occupies commodious premises at Randwick, prints and/or publishes more than 1,100 different types of publications, all of an educational nature, for use in secondary schools, technical colleges and (to a lesser extent) universities.

During 1967 the unfavourable trend in trading activities reported in 1965 and 1966 was halted and in 1968 the company was once again

operating on a sound financial basis with increased production and sales as the outstanding features.

The Press retains its earlier link with the Sydney Technical College in the form of the retail store on the ground floor of the old Marcus Clark building in Railway Square. This site has proved a profitable one and it is hoped will be even more beneficial to the Press when the college completes full occupation of the building.

During the year the Directors authorized the purchase of a special camera and ancillary equipment, at a cost of nearly \$2,000, with the object of improving plate-making facilities. Experience has shown that plates of markedly improved quality can be produced at considerably less cost than was previously incurred for the services of outside plate suppliers.

16. The Medical Foundation

The Medical Foundation was established in 1963 and is the official fund-raising body for the Medical School and its group of teaching hospitals. The Foundation is a registered company limited by guarantee and is governed by a Board of thirteen Directors, comprising senior members of the University and prominent men in public affairs, under the chairmanship of Sir Robert Webster.

Although the State and Commonwealth Governments allocate funds for medical education and to the hospitals for medical care, additional funds are always required for special research work which shows promise of a break-through in medical knowledge and which needs the full-time attention of highly skilled persons, costly equipment and accommodation. It is the aim of the Medical Foundation to raise money by public subscription for this purpose.

A continuing appeal directed towards developing the initial activities of the Foundation was carried out during 1968, a large number of business organizations being approached to support the Foundation. A sum of \$9,769.40 was forthcoming, details of the donors being shown in the section of this report dealing with Benefactions.

17. Arrangements with the Departments of the Navy and the Army

Royal Australian Naval College, Jervis Bay

The 1967 report outlined the agreement entered into for the association of the University with the Royal Naval College, Jervis Bay.

Implementation of the agreement with the Royal Naval College has progressed well. First year subjects were approved for courses in the Faculties of Applied Science, Engineering and Science; selected College staff were accredited to teach these subjects and 20 students enrolled at the College in 1968. Close contact was established between College and University staff and there have been frequent and regular visits to and from Jervis Bay. A new science block and a library building were constructed at the College and draft specifications for a computer for the

College have been agreed and tendering action is in progress. It is expected that at least twelve students will enter into residence in the colleges on the Kensington campus in 1969 for the second year of their courses.

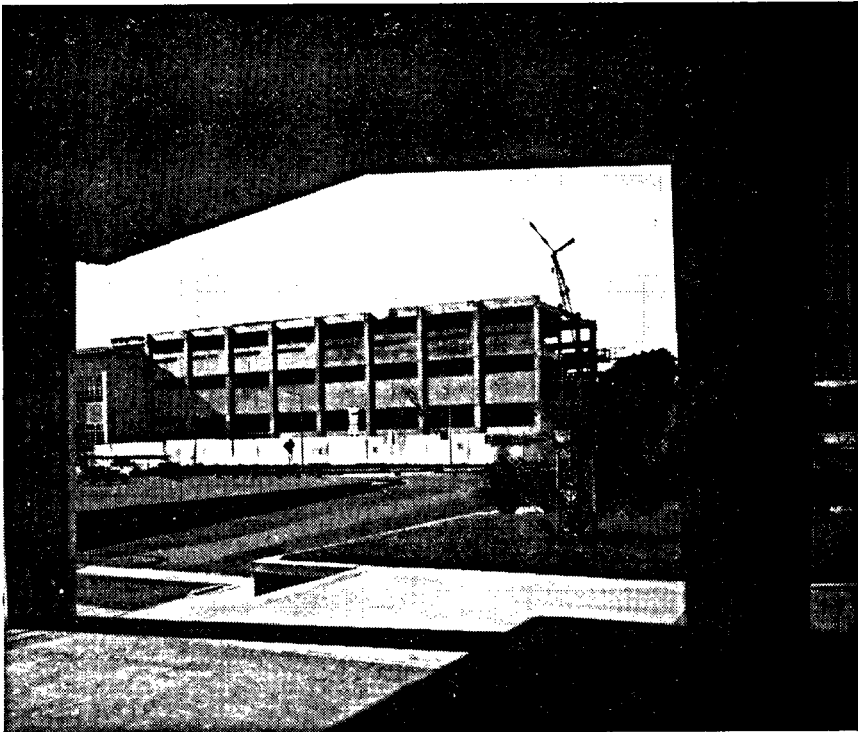

The Royal Military College, Duntroon

The Faculty of Military Studies is now in full operation at the Royal Military College, Duntroon, and details relating to it may be found in section 2.3 (a) of this report, under the heading of The Faculties.

18. Research Activities

The research activities of the University are financed from four main sources, viz., the Australian Research Grants Committee, the general recurrent vote, the special research grant made by the State Government, and grants from industry, commerce and special agencies, instrumentalities and foundations.

In addition, postgraduate research scholarships, including 58 new Commonwealth postgraduate awards in 1968, help to sustain full-time students as research workers.

The Sir Robert Webster Building which will house the School of Textile Technology.

In the 1964-66 triennium the Commonwealth and the State Government contributed on a dollar-for-dollar basis towards the "A.U.C. special research grant". The two governments also contributed on a similar basis to sustain grants recommended by the Australian Research Grants Committee.

Following the decision of the New South Wales State Government not to contribute in 1967 on a shared basis with the Commonwealth towards the grants recommended by the Australian Research Grants Committee, the half of the A.U.C. special research grant which would normally have been contributed by the Commonwealth Government was forfeited and as a result the University received only the half contributed by the New South Wales Government. This meant that for general research purposes the grant which in 1966 had been \$266,000 was reduced to \$120,000 in 1967 and in 1968 it was also \$120,000.

In 1968 the number of candidates enrolled for the degree of Doctor of Philosophy increased from 417 to 474 (increase 57) and of other higher degree candidates from 988 to 1,156 (increase 168). There was also an increase of 171 postgraduate diploma students, bringing the total increase of postgraduate students to 396 for the year.

FACULTY OF APPLIED SCIENCE

School of Applied Geology

In 1968 progress was made in certain long-term research projects and these include:

Metamorphic effects on, and reconstitution of, sulphide ore bodies; ore bodies associated with volcanic rocks (Associate Professor L. J. Lawrence, Dr. N. L. Markham and co-workers).

Clays and allied deposits, rock weathering and the relationships between silcrete and laterite (Professor J. J. Frankel and Associate Professor F. C. Loughnan).

Marine geophysical investigations over the Coral Sea plateau and basin; geophysical study of the deep sea floor and continental margins between Australia and Antarctica; study of the continental margin of north-west Australia; the measurement of variations in the geo-magnetic field at sea including a study of the sea mounts in the Tasman Sea (Mr. L. V. Hawkins, Mr. J. Ringis and postgraduate students, partly in association with Lamont Geological Observatory and vessels *Oceanographer*, *Vema*, *Nella Dan* and H.M.A.S. *Diamantina*).

Oceanographical research included participation in the Scripps Institute of Oceanography Nova Expedition to the Coral Sea and foraminiferal and mineral studies of samples collected on the continental shelf in Hervey Bay, Queensland. Bathymetric work on the Tasman Sea continues (Dr. A. N. Carter and Dr. J. C. Standard).

Work was continued on the sediments of Sydney Harbour, and the cores from 65 bores to bedrock were collected. Work on the sedimentation, mineralogy and foraminifera of these bores is continuing (Dr. J. C. Standard and Dr. A. D. Albani).

The classification and distribution of recent foraminifera along the eastern continental shelf and the Solomon Sea, and the western Indian Ocean (Dr. A. N. Carter and Dr. A. D. Albani). Sedimentation and foraminiferal ecology in Broken Bay (Dr. A. D. Albani). Petrology and economic mineralogy of ultramafic belts in N.S.W. (Dr. H. G. Golding). General mineralogical and petro-genetic problems (Professor J. J. Frankel, Dr. H. G. Golding, Brenda J. Cahill, Mr. J. Ransley and Dr. N. L. Markham).

Engineering geology reports of Carcoar, Lostock and Toonumbar Dams for N.S.W. Water Conservation and Irrigation Commission (Mr. A. D. M. Bell, Dr. B. Marshall and co-workers). Engineering geology investigations of damsites on Borey Creek, Manilla River and Peel River for N.S.W. Water Conservation and Irrigation Commission (Mr. A. D. M. Bell and co-workers). Groundwater studies of the Cullinga Creek catchment, Cootamundra (Mr. A. D. M. Bell).

Orogenic and epeirogenic activity in N.E. Tasmania was investigated and structural analysis of Tasmanian pre-cambrian is continuing (Dr. B. Marshall). A study of the structural and metamorphic evolution of

the Euriowie Inlier near Broken Hill was commenced and studies on zircon in high grade metamorphism and engineering problems of dam-sites continues (Dr. B. Marshall).

Investigation into the occurrence and mineralogical properties of gem stones in Australia continues (Dr. L. E. Koch).

Stratigraphical correlations; sub-surface geological and petroleum engineering investigations into hydrocarbon accumulations in peripheral sedimentary basins (Mr. J. C. Cameron).

Considerable grants towards Geophysical Research expenses were received from oil companies and the Australian Research Grants Committee. The Broken Hill Mining Managers' Association is continuing its grant towards the expenses involved in the research programme on the Broken Hill ore bodies. Esso Standard Oil (Australia) Ltd. made a grant of \$2,000 to the Head of School, which was used to purchase a workboat for the Department of Oceanography. Additional support for Oceanography came from de Havilland and Esso Exploration.

A postgraduate scholarship in palynology was established by Esso Standard Oil (Australia) Ltd., and the first incumbent has embarked on his research project under Dr. P. R. Evans.

Eleven students were registered for the degree of Doctor of Philosophy, fourteen for Master of Science and five for the Graduate Diploma in Applied Geophysics. A Master of Applied Science course in hydrogeology is now available. Twenty papers containing some results of the research undertaken were published.

School of Chemical Engineering

Research activities were as follows:

(i) Department of Chemical Engineering

Fluid-particle dynamics; pneumatic and hydraulic transport (including heat transfer); spouted beds.

Coal: continuous low temperature carbonization: microbial leaching; sulphur removal and recovery.

Reaction engineering: diffusion and reaction in heterogeneous systems; non-ideal mixing: optimization: chlorination of ethylene, toluene; bubble column reactors.

Ore beneficiation: flotation, biochemical and chemical.

Interface phenomena: mass transfer, thermodynamics.

Hydrothermal precipitation: nuclear materials.

Systems engineering: non-linear dynamics.

Biomedical: heat and/or mass transfer, models, thermodynamics: renal and respiratory regions.

Pollution control engineering: air, water, and solid refuse problems; problems of biological waste.

(ii) Department of Fuel Technology

Coal: nature and mechanism of formation of volatile products of pyrolysis; high temperature fluidized bed carbonization solvent extraction; char characterization; combustion.

Liquid and gaseous fuels: combustion studies; kinetics and mechanism of indirect oxidation of light hydrocarbons; engineering application of natural gas; flame stability; emissivity and radiation from flames.

Pollution control engineering: air pollution control; disposal of domestic, municipal and industrial solid wastes by incineration; control of vehicles' exhausts; incinerator design; refuse as a fuel; special pollution problems from combustion of high moisture and high ash solids and wastes.

(iii) *Department of Food Technology*

Dehydration (cereals, fruits, vegetables and cheese); food colour (relationship of visual appearance to pigment content); food flavour (volatiles of foods and model systems); processing (quality characteristics); continuous culture (production of fermenter milk products); water pollution (problems of oysters).

(iv) *Department of Biological Process Engineering*

Microbial dynamics and simulation; production of microbial protein from plant materials; continuous culture; production of antibiotics in multi-stage continuous systems.

School of Chemical Technology

Research in the three Departments of the School was as follows:

(i) *Department of Industrial Chemistry*

The oxidation kinetics of metals dissolved in fused salts; the preparation of lithium and aluminium iodides; the electro-deposition of alloys and refractory compounds from halides; a study of the equilibria in melts containing silica, alumina, cryolite and metals; electrochemical studies on sulphides dissolved in molten halides; electrochemical studies on lead oxide dissolved in lead halides.

Dr. B. J. Welch received continued support from the Australian Research Grants Committee for research into the electrochemistry of oxides dissolved in molten fluorides. Mimets Pty. Ltd. have continued financial support for an investigation into the electrolysis of lead and zinc chlorides and Rheem (Aust.) Pty. Ltd. provided funds for the development of a scanning potentiostat.

Research was continued on multi-variable process identification and process optimization, using the School's hybrid analogue computing facility.

(ii) *Department of Ceramic Engineering*

A study of the reaction and diffusion mechanisms between titanium dioxide and ferric oxide at high temperatures, using the electron beam microprobe analyser; a study of the reaction between barium hydroxide solution and titanium dioxide under hydrothermal conditions using single crystals of titanium dioxide; a study of the nucleation of crystalline phases from borosilicate glasses under the influence of various catalysts

and heat treatments; the development of a membrane electrode to study the crystallization of calcium sulphate from solution; a study of the effect of grain size upon structural and dielectric anomalies in barium titanate ceramics; the influence of anion and cation doping and processing variables upon the resistivity of ceramics having a perovskite crystal structure; a study of the sintering behaviour of thoria powders (assisted by a grant from the Australian Atomic Energy Commission); an investigation of the service behaviour of high-temperature materials in a further study of the attack of molten copper on chrome-magnesite refractories; the effect of sulphur dioxide in the firing of structural clays; the preparation of synthetic wollastinite; modification of the physical properties of ceramic materials by surface treatments.

Major plant received included a Du Pont differential thermal analyser.

(iii) Department of Polymer Science

The synthesis of methacrylate monomers; correlations in gas phase chromatography; separation of homologous series of esters using gas phase chromatography; polymerization of vinyl chloride in the presence of internal plasticizers; the grafting of acrylate polymers to wool; preparation and evaluation of the properties of copolymers of epichlorohydrin and tetrahydrofuran; preparation and evaluation of the properties of copolymers of propylene oxide and tetrahydrofuran; the grafting of sulphur bearing polymers to wool; the synthesis and polymerization of substituted acrylic monomers; gel permeation chromatography.

The Graduate Diploma in Polymer Technology continues to be well supported and current enquiries indicate that this support will continue in 1969.

Twenty-four candidates were registered for higher degrees: Industrial Chemistry (7); Ceramic Engineering (10); Polymer Science (7).

Nine papers were published.

School of Geography

Research was conducted on sand dunes in Central Australia, a project being carried out in conjunction with C.S.I.R.O. and supported by an A.R.G.C. grant to Professor J. A. Mabbutt. An additional 6-channel recorder for the automatic measurement of wind direction and velocity was installed at the dune site in the Simpson Desert.

In collaboration with the Commonwealth Bureau of Mineral Resources, landform studies and physiographic mapping continued in south-western Queensland. An aim of this work is the employment of geomorphic techniques in the elucidation of the later geological history and the systematic depiction of terrain.

Staff of the School carried out a survey of land types on the University's Fowler's Gap Field Station to provide a framework for environmentally based experimental work there, and a climatic station is being established at this location.

Two candidates were registered for higher degrees.

There were five publications by members of staff.

School of Metallurgy

The School was particularly active in both sponsored and applied research.

Kensington

Further grants were received from the Australian Research Grants Committee in connection with six projects relating to the use of the electron probe microanalyser, and three projects using the Istron testing machine. The additional grants for 1968 amounted to \$10,870 and for 1969, almost \$18,000. Work on these projects is continuing and a number of publications have emanated from this work.

Work is also proceeding on the "Moment Connections Project" sponsored by the Australian Welding Research Association and two appointments were made late in 1967 for this purpose. Mr. G. H. Hilliard, a graduate of Bandoeng and Nevada Universities, was appointed as a professional officer, and Mr. F. McGann as a research assistant. This project has been renewed for 1969, and is expected to continue during 1970. A large grant, amounting to \$13,150, has been received from the Australian Atomic Energy Commission for research into the oxidation of zirconium and its alloys.

The most recent development in industrial research within the School is associated with the formation of a Foundry Research Council, set up under the auspices of the Institute of Australian Foundrymen (N.S.W. Division) to sponsor basic and applied research in fields of interest to the foundry industry. Contributions totalling \$9,000 p.a. for three years have been made or promised, so far, by interested companies, and Unisearch Ltd. has made available a grant of \$5,000 to assist with the work. A senior research worker who will be Director of Research has been selected and it is hoped he will take up the appointment in the near future.

In addition to these special projects, the research interests of the academic staff and students range over the whole field of metallurgy and include basic and applied research in extractive, chemical, physical, mechanical and industrial metallurgy. Areas in which particular progress is being made include: dispersed phase refining processes (decoppering of lead, electroslog refining, etc.); heat transfer to molten metals; the refining of steel, lead, zinc and copper; the oxidation of iron-nickel, chromium alloys; the crystallography of martensite transformations; phase transformations in carbon and low alloy steels; the rolling and annealing textures of metals; magnetic materials and magnetic transformations; the relation between structure and the flow and fracture properties of steels; strain ageing.

Members of staff continued to provide consulting and advisory services to industry through Unisearch Ltd. and over 70 sponsored investigations were carried out.

Wollongong

The Department of Metallurgy at Wollongong received a grant from the Atomic Energy Commission for research on the creep of zirconium,

under the supervision of Dr. G. Brinson, Head of the Department. Other main research interests include the solidification of metals; the nature, distribution and effects of non-metallic inclusions in cast and wrought iron alloys; high temperature mechanical properties; heat and mass transfer in metallurgical processes, and the structure and properties of electrolytic tin plate.

Equipment

New items of plant and equipment received include a 12-channel recorder and an A.C. welding generator for use in welding research; a storage oscilloscope for the electron probe unit, and mechanical metallurgy research; a low temperature bath for use with the Instron machine; a photographic enlarger, a Diehl calculator, with printout, and a straining stage for the electron microscope. For teaching purposes closed circuit television equipment has been procured to facilitate microscopy demonstrations, and an overhead projector and a 3M dry photocopier.

A special allocation was received for replacement of obsolete equipment and this will be used to purchase a new X-ray diffractometer unit, which, unlike the present Philips unit, will be of horizontal type. The JEM 6A electron microscope was also replaced with a JEM 100U which is a much more sophisticated instrument that will facilitate the use of new techniques in transmission microscopy. The Faculty of Applied Science will shortly acquire a scanning electron microscope which will be of considerable use to the School for work on surface effects in transformations, fractography and for general purposes. A spark machining and cutting unit which is being made available from A.R.G.C. funds will facilitate the School's electron microscopy activities.

Some 35 papers have been published or submitted for publication by research workers in the School.

School of Mining Engineering

Research in the School was as follows:

Rock Properties and Rock Mechanics: Pillar Strength Studies: A project on the factors governing the strength of coal pillars has been completed. The investigation yielded detailed information on the effect of constraint on pillar strength.

Rock Drilling Studies: A vertical Hercus type 4A drill has been purchased and will be converted into a diamond drill for research into some of the factors affecting the drilling of rocks.

Interfacial Studies: Emulsion Flotation: A detailed study of some of the physical and chemical phenomena in emulsion flotation was completed. This work, which concentrated on electrokinetic studies for oxide mineral flotation systems, will be extended to other mineral systems. A Kahn electro-balance has been purchased and this will be used to measure some of the forces involved in the attachment of oil drops to mineral particles.

Adsorption of Metal Ion Species at the Quartz Surface: Following the studies on Fe(III), Ni(II) and Co(II) electrokinetic measurements

have been made on Cu(II) and Ca(II). Measurements on Bi(III) Cr(III) and U(IV) are being made at present. This work is of significance in both ore deposit formation and treatment.

Adsorption of Xanthate or Chalcopyrite: The adsorption of xanthate on chalcopyrite and the influence of chalcopyrite mineralogy on this adsorption are being investigated. Hallimond tube and U.V. spectra measurements are being used to study the adsorption. Electron probe measurements are being used to study the micromineralogy of the chalcopyrite.

Flotation Kinetics: An investigation of the effect of particle size on the flotation kinetics of calcite has been completed.

Process Design: A study of the treatment of Savage River iron ore deposits and the influence of the mineralogy of the ore on the mineral processing operations has been completed.

Wire Rope Research: Results of research in this area now place the School in a position to assist Government Department of Mines in framing codes which may ultimately become part of legislation relating to mine safety. Australian Mineral Industries Research Association (A.M.I.R.A.) provides substantial funds in support of this research.

Air Lift Pump Characteristics: This work is concerned with the application of the pump to elevate sea floor sediments in offshore mining.

Statistical Techniques in Mine Sampling: The log-normal distribution is being investigated in relation to mine sampling. It is likely that this work will be extended to economic feasibility studies and to acceptance or non-acceptance decisions in mineral projects.

Ten candidates are registered for higher degrees and nine students are enrolled in postgraduate diploma courses.

There has been increased financial support by some mining companies for scholarship purposes.

Six papers were prepared for publication. One of these on education in the mineral industry attracted considerable attention in Australian and overseas journals.

School of Textile Technology

Research activities were as follows:

(i) *Textile Chemistry:* Interactions between dyes and surfactants during dyeing; dyeing of wool with reactive dyes; adsorption of non-ionic surfactants by wool; reactions of pre-formed polymers with amino acids and proteins; reactions of oxidizing agents on keratin and related proteins; chemical and structural changes during wool setting; chemical reactions involved in the yellowing of wool by heat, light and alkali; photochemical studies of dyed and undyed proteins.

(ii) *Textile Engineering:* Design and construction of a machine to carbonize wool with minimum fibre damage and entanglement; improved efficiency in loose wool drying; development of more efficient and faster machines for wool fibre straightening and combing; electronic methods of nep counting.

(iii) *Textile Physics*: Investigations of the effect of fibre uniformity on mechanical properties; fibre migration in spinning and drafting; structural mechanics of knitted fabrics; temperature and regain changes during the steam setting of wool.

The major items of research equipment acquired were a recording spectrophotometer and a scanning electron microscope and the latter will enable the expansion of the research programmes in fibre structure and mechanical processes.

Eighteen candidates were registered for higher degrees.

Five papers were published.

School of Wool and Pastoral Sciences

Studies continued on the factors controlling the onset of puberty in the ewe and the reasons for lowered fertility in young ewes. Results of this work may enable the design of management systems which increase fertility in young ewes and in the flock generally.

Studies of the hypothalamus and anterior pituitary of the sheep are proceeding in conjunction with bioassay of hormones in blood and tissues.

Parasitology: Research studies of the enzyme systems of the glycolytic and T.C.A. cycles of *Haemonchus contortus* and *Fasciola hepatica*.

Renal Function: A study of the metabolism of oxalates under conditions of stress.

Selenium: An examination of the interactions between some endocrines and liver necrosis due to selenium insufficiency in rats.

A research project concerned with two farm management study groups in the Orange district is now in its eighth year; the data collected have been used in linear programming in the Orange district.

Dental Studies in Sheep: Studies of the effects of age of weaning and various nutritional and management regimes on the behaviour and lasting quality of sheep's teeth have now reached an advanced stage. A thesis (Ph.D.) on several aspects of these studies is at an advanced stage of preparation. Studies on the effect of age at first mating on the lifetime performance of crossbred ewes are being continued.

Agronomy: Research was continued on the phosphate requirements of pastures and on soil and plant factors affecting selenium nutrition of grazing animals.

Animal Nutrition and Physiology: Investigations of the nutritive and productive value of high quality green feed of several promising species were completed during the year. Studies of the role of urea and protein supplementation, several low quality roughages treated with gamma irradiation, were continued. Other investigations dealt with the responses of Merino sheep to under-nutrition. Studies on the nutritional and physiological interaction of *Ostertagia circumcincta* infestation of Merinos continued as well as studies on physiological aspects of some anthelmintics. Studies upon the further development of methods of predicting intake of freely grazing sheep continued. Studies on drought feeding of sheep and the role of "protected proteins" were initiated at Trangie. Studies on the effect of surfactants on animal tissues continued—especi-

ally in relation to reproductive physiology. Studies on the application of radio isotopes and gas chromatography techniques to rumen fluid metabolites and parasite metabolites continued.

Population Genetics: Extensive laboratory studies were made of the effect of restricted population size on response to artificial selection, and the experimental work was supported by development of an appropriate mathematical theory. In addition some operational problems of animal breeding were analysed to determine which procedures are most profitable in terms of genetic gain for a fixed amount of testing facilities.

Studies of single and multi-character selections for wool and reproductive traits in Merino sheep are being continued on a long-term basis.

Reproduction Physiology: Pelvic endoscopy of adult high fertility ewes and hoggets of various selection groups was initiated to correlate ovarian variation with blood levels of critical hormones and the onset of breeding. A series of potential ovulating compounds were screened for ovarian activity in the ewe.

The establishment of objectively selected flocks, in leading Merino studs, is proceeding satisfactorily. Theoretical investigations of methods which might increase the efficiency of animal improvement are being continued.

Earlier studies on the configuration of single fibres are now being supported by dynamic experiments in the decrimping region and at low strains. This work is now being supported by studies on the composition of high and low crimp fibres and the structure of follicles producing these fibre types.

Extensive analyses in the field of wool metrology have established the relationship between the objective characteristics, yield and fibre fineness, and their subjective estimates by wool valuers. It is expected that these results will play an important part in future alterations to the marketing of greasy wool. Progress is being made with a study of dust penetration in fleece.

Wool Projects

Fleece analysis and valuation for a project to study age of mating lifetime performance studies at high rates of stocking in the Orange district continued. Fleece analysis and valuation for field trials at Mulberrygong were also carried out.

A new joint project with the Division of Plant Industry, C.S.I.R.O., Australia was commenced, involving trials of sulphur fertilization on a range of soil types and a study of the resultant effects on wool growth and fleece characters.

A second project with C.S.I.R.O. in Western Australia, consisting of a trial of weaner nutrition and its effects on wool growth, fleece characters and wools price, was also commenced.

The economics of piece picking are being studied in a trial in which each co-operating grazer makes available 20 bales of skirtings for preparation and marketing in picked and unpicked lots. Much conjecture exists within the pastoral industry as to the merits and economy of traditional methods of the preparation of skirting. The results of these trials will be of considerable interest to industry.

FACULTY OF ARCHITECTURE

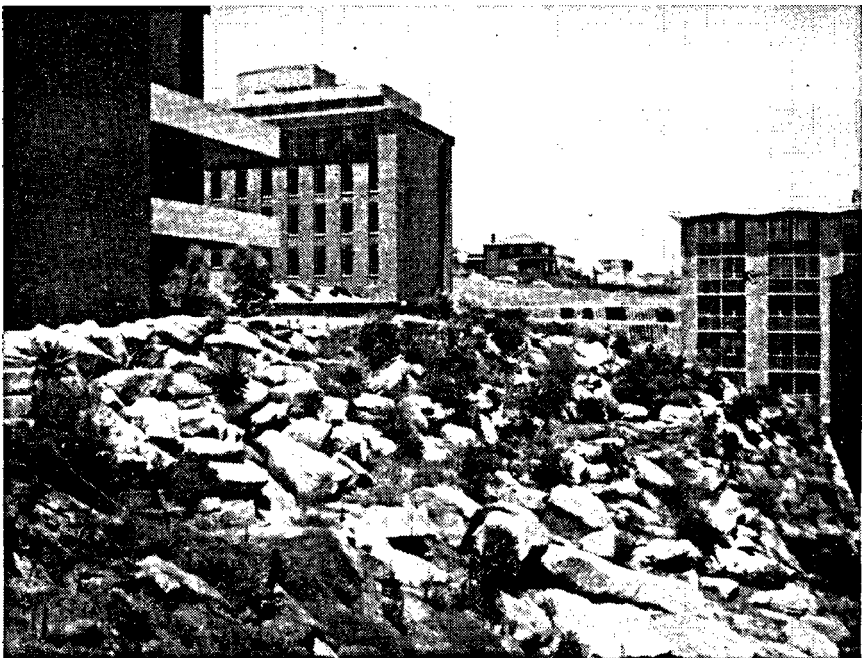

School of Architecture and Building

New research projects initiated during 1968 were:

The use of models as an aid in the acoustic analysis of auditoria; an investigation into the design of radio broadcasting studios; weathering characteristics of AUSTEN 50 corrosion-resistant steel (a similar steel has created widespread interest in the U.S.A. as an architectural feature combining strength with permanence); an economic study of housing production and associated works in Australia; prefabricated building components; load-bearing properties of aluminium roofing sheets and thermal properties of double glazing and double sash metal windows (undertaken in association with Unisearch Ltd.); structural properties of shallow spherical concrete domes.

Continuing research projects include:

Research into the general history of Australian architecture and into the lives of several important architects of the past. This work has undergone a significant change over the past few years, and what was previously a programme of measuring and recording extant buildings

An informal rockery separates the Commerce and Central Lecture Theatre area on the left from the Engineering complex on the right.

has now become primary research into architectural information. Results are most encouraging, and it is proposed that they will be published.

Standards for residential land subdivision; temperature and humidity gradients in buildings; measurement of light intensities; investigation of the properties and potential uses of wire and mortar structures; investigation of catenary domes; a study of the dynamic properties of pre-stressed concrete structures; use of computers in building planning layout; inter-reflections of light in buildings.

Measurement and analysis of external noise in urban locations. During 1968 the work in this field was directed towards the measurement and analysis of road traffic noise, and the development of a prediction method for specifying sound insulation for external walls of buildings situated on main highways. Results achieved have already proved of value to the architectural profession, and it is anticipated that further investigation will provide a scientific basis for planning roadside development in relation to acceptable noise levels.

Sound absorption of various materials using impulse sources; investigation of the methods of regulating for noise control.

Projects completed during 1968 were:

Computer design of the geometry of reticulated domes and computer production of perspective drawings. Both these projects were brought to a successful conclusion with the production of computer programmes.

The School acquired the following equipment for research purposes:

Solarometer and precision voltmeter; variable high-pass, low-pass band filter set; sound delay machine; special high-speed acoustic signal recorder. Maruto compression tester; Horstman universal polariscope; Soiltest sonometer; Taber abraser.

In addition to the above, the School is building a loading rig of 30 tons capacity for testing purposes, and is preparing detailed drawings of a weathering laboratory to be constructed above Wing 3, Main Building.

Seven new candidates registered for higher degrees.

Sixteen technical papers and two books were published during the year.

FACULTY OF ARTS

School of Drama

Research was undertaken on:

Shakespearean productions; Australian theatre history; the mechanics of European farce; the Restoration Theatre; the history of Shakespearean productions in nineteenth century Australia; seventeenth century opera in Italy.

Three candidates were registered for doctoral degrees and three others were taking qualifying courses, preliminary to registration as higher degree candidates.

School of Education

Research Activities

As was reported in 1967, the provision of a teaching programme

has been the first commitment of the staff of the School of Education and the number of staff members has been so small that it has not yet been possible to initiate a major research programme. However, a research assistant was appointed in 1968 and several research studies have been undertaken.

One study is being started on the role of inspectors of schools in Australian Departments of Education and a second is concerned with an enquiry into aspects of under-achievement in secondary schools in New South Wales. This enquiry is directed towards an examination of the psychological and academic background of pupils by means of a case-study approach. A third research project has been concerned with an investigation of levels of academic study in courses leading to the Higher School Certificate in New South Wales, with particular reference to personality traits and academic achievement of secondary school pupils.

School of English

Research Activities

The research of the teaching staff continued to centre on Shakespeare and other Elizabethan and Jacobean literature (with special attention to editing); eighteenth century and other satire; Australian literature; Australian speech; and linguistics. Postgraduate students were working in the same fields (with the exception of satire) and on mediaeval and nineteenth century literature.

School of French

Research was conducted on:

Thematic criticism; the theatre in the French literary imagination; nineteenth and twentieth century French literature and philosophy (writers studied included Nerval, Alain, Bernanos, Malraux, Apollinaire, Daumal and Gracq); and the Australian image of France and the French.

Work continued on the preparation of a critical edition of Paul Valéry's notebooks and on other aspects of his thought.

Three candidates were registered for higher degrees.

One book and four papers were published.

School of German

Research activities were as follows:

"Irony and Eros" in the work of Thomas Mann; the lyrical work of Johannes Bobrowski; the dramatic work of Max Frisch.

Structure and symbolism in Goethe's *Die Wahlverwandtschaften*; study on the development of the work of Bertolt Brecht up to his conversion to Marxism; the influence of Sophokles' tragedy *King Oedipus* on the work of Heinrich von Kleist.

Symbolism in alchemy, literature (Goethe) and modern psychology (C. G. Jung); investigation of the mandala motif and the relationship

of dancer-puppet-angel in the imagery of 18-20th century European literature.

As requirement towards the Ph.D. (for the University of Queensland) "Das Hervortreten des Erzählers in Thomas Mann's Roman *Der Zauberberg*" (author intrusion in Thomas Mann's novel *Magic Mountain*).

Publications

Review of Margrit Henning's "Die Ich-Form und ihre Funktion in Thomas Mann's *Doktor Faustus* and in der deutschen Gegenwart", Niemeyer, Tübingen, 1966, in *AUMLA* No. 28, pp. 282-284.

The Section "Romantic" in the Year's Work in *Modern Language Studies*, vol. XXVIII, pp. 490-503. Professor W. G. Hesse.

The Symbolism in Goethe's *Das Märchen*, *AUMLA* No. 29, May, pp. 52-60. Herr Keuner und Herr Brecht, *Germanic Review*, May, vol. 43, No. 3, pp. 188-200. Dr. J. R. Milfull.

Wilhelm Meisters Mignon—ein offenes Rätsel—Name, Gestalt, Symbol, Wesen und Werden. *Deutsche Vierteljahresschrift für Literaturwissenschaft und Geistesgeschichte*, vol. 42, No. 1, pp. 89-116. Dr. H. H. Ammerlahn.

Two students are proceeding to higher degrees.

School of History

Research was conducted into Irish history (with special reference to the Irish revolutionary period 1887-1923 and to Irish nationalism in Australia; the history of English philanthropy; Australian foreign relations (with particular reference to Australian policy on colonial issues at the United Nations); New Guinea history; Australian colonial history (with emphasis on early agricultural history and the history of the Anglican Church); Australian Catholic history; non-European immigration into Australia; Australian biography (Sir John Forrest; Rev. Samuel Marsden); and the preparation of entries for the Australian Dictionary of Biography vol. 3.

Commissioned Project

After consultation with the Speaker of the Legislative Assembly, the Government of New South Wales in 1967 commissioned the School of History to write a history of the Parliament of New South Wales which will extend from 1855 to 1970, when it is anticipated that the Government will publish the work to commemorate the bi-centenary of the discovery of New South Wales. A full-time Research Fellow and a full-time Research Assistant are conducting the research for the project and they are being aided by a Consultative Committee which consists of members of five universities.

The History will be of wide scope and will cover, in a chronological manner, the work of Parliament over the period and will evaluate the main problems raised in that development, including the role of Cabinet,

the relationship of the Upper and Lower House, and the place of Parliament in relation to other political and social institutions.

It is hoped that people who have played a part in the Parliamentary life of the State, as well as those who have studied it, will contribute their knowledge to the project. The final responsibility for the History will, however, remain with the authors and with the School.

The History will provide a unique opportunity to make a substantial contribution to Australian political history, and it is expected that the project will attract postgraduate students wishing to work in that field.

Thirteen research students were registered for M.A. and Ph.D. degrees during the year, the main field of research being Australian history.

School of History and Philosophy of Science

Research work continued on the preparation of a union catalogue of the source material in the history and philosophy of science held in Australian libraries, as well as on the chronological rearrangement of the "Catalogue of Early English Printed Books, 1475-1640".

Research also continued on ancient Egyptian mathematics and other research has been initiated into hypotheses in ancient science, the history of the treatment of scurvy, the possible connection between the Royal Society's new philosophy and the English Reformation, and early relations between the time of creation and Easter.

A micro card reader and a microfilm reader and printer were obtained and have been put into use.

Nine candidates were registered for higher degrees and two were undertaking qualifying studies for higher degree work.

Three papers were published.

School of Librarianship

Research continued on alphabetical indexing with special reference to relatives indexes, subject headings lists and thesauri, finance for the project being provided from the Council on Library Resources, Inc., Washington, D.C.

There were eleven candidates for the degree of Master of Librarianship.

School of Philosophy

Individual research activities of members of the School continued and several new ones were undertaken. Professor C. L. Hamblin completed a project for the computer programming of algebraic problems, at a stage at which it was demonstrated that the method was feasible in principle for certain classes of problems and that further progress was largely a technical matter.

Professor Hamblin also completed a book on Fallacies, to be published in 1969; an English edition of his *Elementary Formal Logic*

appeared and arrangements were made for its translation into Swedish. Mr. R. S. Walters collected material for a book on the Rationalist philosophers, Leibniz and Spinoza. Mr. A. W. Sparkes continued his research into the concepts of authority and community in politics. A senior research student, Mr. V. H. Dudman, edited, translated and published two significant articles on the foundations of mathematics by Gottlob Frege.

Mr. R. S. Walters was appointed Review Editor of the *Australasian Journal of Philosophy*.

Five candidates were registered for higher degrees.

School of Political Science

Research was conducted on:

Urban government and the politics of cities; the politics of church unity in Australia; the political role of irreligious movements in Australia, with special reference to the Humanists; attitudes adopted in the public debates on six major crises in international affairs; the formulation of political wants into political demands; recent criticism of political pluralism and of the notion of "polyarchy"; systems analyses of political life; political principles of regional economic integration; the image of "democracy" adopted by a sample of Australian voters; the sociology of knowledge; African one-party regimes.

The School continued to be responsible for the only professional journal in Australia devoted solely to political studies, *Politics*, the journal of the Australasian Political Studies Association.

Six candidates were registered for higher degrees.

Chapters in three books, and four articles, were published.

School of Sociology

All members of the staff were actively engaged on one or more research projects, the most important of which were as follows:

Professor S. Encel on compilation of data for a book entitled *Class, Status and Power in Australia*; the manuscript is at an advanced stage and it is anticipated that it will be published early in 1969. He also has been engaged on a study of the nature and implications of government policies to promote scientific research and development. This research has been expanded during his study leave with the Science Policy Research Unit at the University of Sussex, U.K.

Further work has been done on the revision of Norman MacKenzie's book, *Women in Australia*, first published in 1962. It has been Professor Encel's responsibility to revise and update the material for a new publication in 1969.

A grant was obtained from the National Health and Medical Research Council to carry out a survey of drinking patterns in Sydney. This survey, of considerable magnitude, is being carried out under Professor Encel's direction, in co-operation with Professor R. A. Layton of the

Department of Marketing; a full-time professional officer, Mrs. M. J. Sargent, was engaged on this project.

A further study in the field of alcoholism, directed by Professor Encel, was sponsored by the Foundation for Research and Treatment of Alcoholism in N.S.W. This is to do with a study of attitudes of the police, magistrates and several other groups of persons professionally concerned, towards alcoholics and drug addicts.

A study of the factors affecting export performance, which involves a survey sample of 400 Australian manufacturing firms, is being carried out by Professor Encel in collaboration with Dr. D. C. Dunphy.

Another of Professor Encel's research projects is being conducted in conjunction with the Library Association of Australia and is financed by the Myer Foundation in order that a study might be made of library employment in New South Wales.

Professor Encel also shared in responsibility for a research project leading to the development of a curriculum in social science for secondary schools in the Territory of Papua-New Guinea. This project, financed by the Education Department of the Territory of Papua-New Guinea, is concerned with producing a curriculum suited to the special needs of students in the Territory. Dr. D. C. Dunphy is co-operating in its implementation.

Associate Professor A. A. Congalton was engaged in completing a survey of the public image of the hospital matron. This report is being written up in conjunction with a parallel report on the nursing image of the hospital matron, being conducted by Mr. P. A. Vinson, who was a member of the School of Sociology, until the Department of Social Work separated during the year. It is anticipated that a comprehensive publication will include reports on both these pieces of research in addition to a report on the self-image of the social worker (also being investigated by Mr. Vinson and public attitudes to medical services in Sydney being completed by Associate Professor Congalton).

The study of occupational aspirations and social characteristics was still active and will be completed in 1969 when Associate Professor Congalton returns to Washington State University to complete additional field work in the project.

A further study concerning the correlates of social class was carried out by Associate Professor Congalton to examine the degree of relationship between occupational prestige and the suburb of residence.

Dr. D. C. Dunphy has been engaged on a cross-national study of behavioural correlates and received a grant from the Australian Research Grants Committee to expand his survey entitled "Problems of Rapid Organizational Growth in Industry". This project was initiated by the Harvard School of Business Administration and Organization; business firms undergoing rapid expansion will be studied in both Australia and the United States.

Further research conducted by Dr. Dunphy in collaboration with Professor R. A. Layton and Mr. R. March of the School of Marketing and Professor Encel in the School of Sociology, was concerned with factors affecting export performance. It aims to study a representative

sample of Australian manufacturing firms to identify the factors which affect involvement in, and successful performance in, Australian export.

Mr. A. Kondos has completed a report entitled "A Survey of Architects in New South Wales" and is engaged in an investigation concerning a profile of people engaged in the building industry in Sydney; also a research project aimed to discover the social characteristics of city dwellers in Sydney.

In the absence of Professor Encel, Mr. Kondos was directly responsible for the direction of the survey of libraries in New South Wales. A further investigation into social class was completed and the report was written on the delineation of the subjective social class structure of Melbourne.

Mr. R. Nies has been engaged on a general survey of the occupational position of shift workers, with particular reference to electrical operators in New South Wales.

Mr. S. O. D'Alton worked on a research project with Dr. J. Power, of the Department of Government, University of Sydney, concerned with "The Electoral Method of Douglas Darby", and the results of this investigation will appear as a chapter in the book, *Politics in a Suburban Community* (ed. J. Power).

A further investigation in the area of political sociology conducted by Mr. D'Alton was concerned with leadership in politics and the possibility of the development of a political image profile.

Mrs. M. J. Sargent who was responsible for collaboration with Professor Encel in the carrying out of the survey of drinking patterns in Sydney, also completed a study of drinking practices and attitudes towards drinking among university students and will present the results in a report entitled "Social Factors Related to Alcoholism".

Twenty-four candidates were registered in the School for higher degrees during 1968.

School of Spanish

Research was conducted on the Don Juan legend; the effect of censorship on post-war Spanish literature; the Spanish post-war novel; indigenista literature in Spanish America; the modern theatre in the River Plate countries (with special emphasis on the work of Florencio Sanchez), and on the contemporary Spanish playwright, Enrique Jardiel Poncela.

There are two candidates for Ph.D. and two for M.A.

FACULTY OF BIOLOGICAL SCIENCES

School of Applied Psychology

Although a wide variety of research projects were undertaken during the year, the trend towards teamwork on interrelated projects was furthered.

During the year groups worked on various aspects of hypnosis, hypnosis and conformity; hypnotic amnesia; suggestibility and delinquency; the dynamics of trance induction.

Various psychometric projects: Spatial ability; creativity and mathematics; the measurement of change in reading skill; scientific originality; executive mental ability.

Attitudes to health: Attitudes to dental treatment; attitudes to X-ray services; attitudes to cancer tests.

The application of operant conditioning theory to therapeutic problems: Family, therapy and stammering; token reinforcement with psychotics; conditioning patterns of communication in small groups.

Group processes: The manager's conflict; attitudes to mental illness; group affiliations in the resolution of conflict; conflict in communication.

In addition, work was undertaken on various aspects of learning theory, on depression, on driving skills and road safety, on embarrassment, and on occupational interests.

Members of the staff of the School contributed papers at various conferences and a number of their articles appeared in scientific journals.

The new course for the Graduate Diploma in Psychology was instituted on a part-time basis and the programme of graduate seminars continues as in previous years.

School of Biochemistry

The research activities cover a wide range but may be grouped in the following related areas:

Protein structure: Determination of amino acid sequences in peptides and proteins; specific chemical cleavage and modification of peptide chains; acylation of proteins and its significance in protein structure; the effect of evolution in the structure of proteins of Australian marsupials; proteins of chloroplasts and their sub-units.

Enzyme reactions: The enzymic sulphation of steroids by adrenal tissue; the glucuronic acid metabolism of Australian marsupials; studies of lysosomal enzymes; enzyme studies on the pathways of glucose oxidation in liver.

Metabolism: The mechanism and function of the pentose phosphate pathway in liver; mechanisms of photophosphorylation and energy transfer in chloroplasts; ATPase activity in chloroplasts; photosynthetic activity of chlorophyll deficient wheat chloroplasts; paraendocrine behaviour of human breast carcinoma tissue; urinary steroids and breast cancer; vitamin A deficiency and steroid hormone metabolism; metabolism of nematodes and trematodes, and mode of action of anthelmintics; metabolism of Australian tunicates and spiders.

Research work was supported by grants from the A.R.G.C. for three projects, from the State Cancer Council for one project and from the Australian Wool Board for two projects. Co-operative research in conjunction with several other Schools was continued. Major items of

research equipment acquired were a preparative ultracentrifuge and improved facilities for radioactive counting.

Twenty candidates (9 Ph.D., 11 M.Sc.) were registered for higher degrees.

Thirteen papers were published.

School of Botany

Research projects can be conveniently grouped into four main fields of Genetics, Plant Physiology and Biochemistry, Mycology and Plant Pathology and General.

1. *Genetics*

Work has continued on:

- (a) Genetical analysis of wheat and related genera.
- (b) Chemical genetics of wax formation in plants.
- (c) Ecological genetics.

Projects include:

(a) *Genetics of wheat and related genera*: Electrophoresis of wheat proteins (Professor H. N. Barber, Dr. C. J. Driscoll, Dr. R. S. Vickery and Mr. P. M. Long). Studies of a reciprocal translocation wheat involving chromosomes 5B and 7B (Dr. C. J. Driscoll and Dr. C. J. Quinn). Transmission studies of a translocation chromosome (Dr. C. J. Driscoll and Leone M. Bielig). Production of a series of monosomic alien substitution lines (Dr. C. J. Driscoll and Leone M. Bielig). Effect of colchicine on meiosis of wheat (Dr. C. J. Driscoll and N. L. Darvey). Studies of hexaploid wheat and related genera (Dr. C. J. Driscoll). Genetic studies on chlorophyll mutants of wheat (Dr. C. J. Driscoll and Rona Butler). Studies of the waxless character in wheat (Dr. C. J. Driscoll and Janet R. Stuckey). Cytological studies on chromosomal aberrations in wheat (Dr. C. J. Quinn). Distribution of phenolic compounds and isozymes in the triticeae (C. E. May).

(b) *Chemical genetics of wax formation in plants*: Chemical genetics of wax formation in the leaves of mutants in Brassica, Pisum, Eucalyptus and Triticum (Professor H. N. Barber, Dr. M. J. K. Macey and A. G. Netting).

(c) *Ecological genetics*: The estimation of selectively-determined variation in species of wide ecological amplitude (Dr. N. J. Hannon). Selection of genotypes within species populations for salinity tolerance (Dr. N. J. Hannon).

2. *Plant Physiology and Biochemistry*

Comparative transpiration and energy budget studies for leaves of eucalyptus (Dr. J. H. Palmer and Mr. P. J. Sharpe). Energy balance of fruits and succulent surfaces (Mr. P. J. Sharpe and Professor H. N. Barber). Cuticular and stomatal diffusion resistance of Eucalyptus

species (Mr. P. J. Sharpe and Professor H. N. Barber). Fruit physiology (Dr. R. S. Vickery). Physiological basis for growth retardation in geotropically stimulated plant shoots (Dr. J. H. Palmer). Effects of environment on the growth form of *Eucalyptus* species (Dr. N. J. Hannon). Inflorescence development in ecotypes of *Phalaris tuberosa* (Mr. K. A. White and Dr. J. H. Palmer). Biochemistry of fat metabolism in plants (Dr. M. J. K. Macey and Mr. A. Netting).

3. *Mycology and Plant Pathology*

Growth and differentiation in fungi (Dr. A. E. Wood and Miss S. K. Hiew). Taxonomy of Basidiomycetes (Dr. A. E. Wood). A study of the species of *Sclerotinia* causing brown rot of fruits (Dr. H. J. Willetts).

School of Microbiology

The School of Microbiology has two Departments: Microbiology (providing courses for the Faculties of Science, Applied Science, Engineering and Chemical Engineering) and Medical Microbiology. A course of postgraduate lectures has been introduced, and the School has also assisted in the presentation of a winter school in meat technology in conjunction with the Australian Meat Board.

The research programme of the Department of Microbiology is concerned with the response of micro-organisms to the physicochemical environment; the chemistry and structure of cell membranes of *Halo-bacterium*; the cytochemistry, antigenic composition and bacteriophage of *Rhizobium*; invasiveness specificity between *Rhizobium* and its host; the fine structure of peptidoglycan in the walls of *Bacillus* and membrane and wall teichoic acids of *Lactobacillus*.

The Department of Medical Microbiology is doing research on microbiological and immunological problems associated with the intestinal tract of man and animals. These include studies on the ecology and classification of the intestinal micro-flora; its relation to host resistance and other immunological activities of the host; antibody production in intestinal tissues; methods for oral prophylaxis against gastro-intestinal infections.

Research projects are supported by the Australian Research Grants Committee; the National Health and Medical Research Council; the World Health Organization; the Rural Credits Division of the Reserve Bank and the Wheat Industry Research Council.

New equipment has included basic items required in the establishment of the Department of Medical Microbiology and others for the large-scale growth of micro-organisms, and the study of chemical and antigenic fractions of microbial structures.

Six papers and two articles have been published.

School of Zoology

The research programme may be grouped under the following headings:

(a) *The Biology of Marsupials*

The physiological and behavioural mechanisms which enable the large kangaroos to live in arid environments were studied. The red kangaroo and the euro, or hill kangaroo, live in the same general area but the thermal and other characteristics of their micro-habitats differ. A seasonal study of water and electrolyte balances in the two species in the wild is being done and associated temperature and metabolic studies are being carried out on captive animals in controlled environments.

Associated studies in intra-specific variation and speciation in kangaroos and other marsupials are continuing. A histochemical study has been made of the tertiary egg membranes that surround the embryo which may be carried, viable but dormant, in the uterus of kangaroos for many months. A survey of environmentally induced changes in the reproductive patterns of kangaroos, begun in 1966, is continuing. Work is proceeding on assay of the reproductive hormone progesterone in marsupials and on genetic variation in wild population of the marsupial Potorous.

The above work is supported, in part, by a grant from the Australian Research Grants Committee which provided the following equipment: oxygen analyser, osmometer, 12-channel chart recorder and hygrometer indicator and sensors.

(b) *The Biology of Fresh Water Animals*

Work on the ecology and life history of lampreys which resulted in, amongst other interesting findings, the discovery of a species of lamprey new to science, has been completed. Work on the radiobiology of fish is continuing.

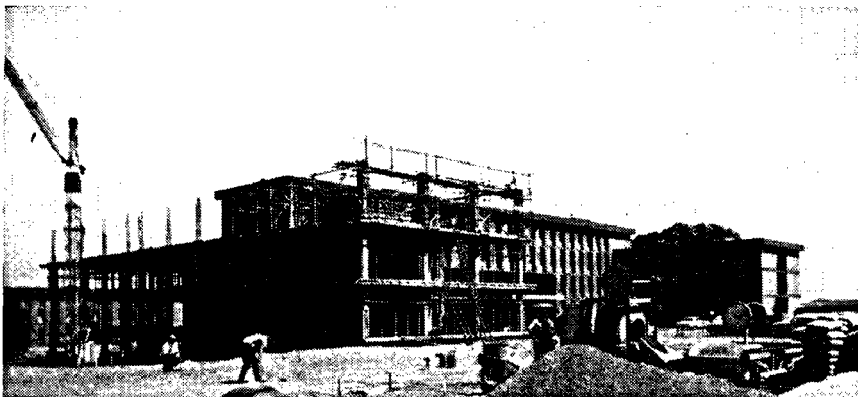

(c) *The Biology of Marine Animals*

A synopsis of knowledge of the crayfish, based on market information and monitoring of fishing, is being prepared. The ecology of two species of mussels, one of which is fast growing and a serious pest in intakes of sea water used for cooling purposes, is being studied. A survey of the animals of Botany Bay is being carried out in conjunction with the N.S.W. State Fisheries Department.

The waters of Myall Lake, Smith Lake and Wallis Lake range from almost fresh to sea water and the animal and plant communities of the lakes reflect these differences. The age and sex structures of a population of Port Jackson sharks have been worked out. Seasonal changes in abundance have been measured by underwater counts and by a programme of tagging. A genetic polymorphism in the haemoglobin of the widely distributed bivalve mollusc, *Anadara trapezia*, is being studied and correlations are being made with environmental parameters such as temperature and salinity. Bivalve molluscs are a major source of protein for human consumption, hence knowledge of the ecology of *Anadara* may be of economic importance. The ecology of the commercial estuarine blackfish and mullet is being studied.

(d) *The Biology of Insects*

A systematic study (the first in the Southern Hemisphere) is being made on the taxonomy, biology and ecology of cave arthropods. Species being studied include the Tasmanian glow worm and the various members of the *Rhaphidophoridae*. Studies on the biology, life cycle and activity rhythms of a new species from the Nullarbor Plain have been completed.

The new wing of the Chancellery under construction.

Post-harvest disinfestation of fruit against Queensland fruit fly by gamma irradiation was found to be technically possible using a dose of 10,000 rads. This study was carried out under a research contract from the Australian Atomic Energy Commission. Research was also carried out on bioassay techniques for testing mode of action of insecticides, insecticide residue analysis and radiation sterilization of sugar cane leaf hoppers.

Many arthropod venoms tested have marked insecticidal activity and knowledge of the effects of these complex substances could lead to a better understanding of insecticidal action. A micromanipulator has been purchased and is being used for applying small quantities of insecticides to individual insects.

Seven papers were published by staff and students of the School and a further six have been accepted for publication.

Eleven candidates were registered for Ph.D. degrees, eight for M.Sc. degrees and six for M.Sc. qualifying courses. Two candidates submitted Ph.D. theses and two M.Sc. theses.

FACULTY OF COMMERCE

School of Accountancy

Research projects were conducted in each of the following areas: Capital investment—an analysis of the application of profitability tests and other criteria in the evaluation of capital expenditure proposals and in the appraisal of performance; reappraisal of methods of incremental analysis for managerial and executive planning and control; survey of financial organization and controls in Australian companies; information systems and accounting; public financial administration; legal protection of minority shareholders; aspects of freedom of expression associated with defamation; appraisal of the present status and information potential of corporate financial statements; development of accounting thought and practice in New South Wales in the nineteenth century; integrated information processing; accounting information needs of management in the textile industry; finance and accounting problems of equipment leasing; role of accounting in evaluation of an organization.

Thirty-seven candidates were registered for higher degrees.

Eleven papers were published.

Graduate School of Business

As mentioned earlier in this report, Council approved at its meeting on 11th November, 1968 the dissolution of the School of Business Administration and replaced it by the Graduate School of Business. The activities of the former School of Business Administration were also absorbed into the new and wider Graduate School.

The most significant research activity undertaken during 1968 which was the last year of the School of Business Administration's existence was a joint project of the School and the N.S.W. Department of Decentralization and Development. The Department first proposed the joint project in 1967, indicating that it would provide the basic finance required, and in due course the University accepted a conditional grant of \$5,000 which made possible the institution of the research project by one of the lecturers within the School, assisted by two part-time research assistants. The project relates to the problems of small business firms in New South Wales. Under the direction of Professor N. R. Wills, Mr. K. Fargher, a temporary lecturer in the School, began the project in March and it is now nearing completion. It has involved the collection of a great deal of information by questionnaire from over 2,000 small business firms.

The State Government's interest arises from its concern to encourage the decentralization of business beyond its present marked concentration in the Sydney metropolitan, Newcastle and Wollongong-Port Kembla regions. Based on the results of the questionnaire, the analysis of which is now nearing completion, the Department proposes to issue information to small business firms which will assist them in their operations not only in their present locations but in the event of businesses being set up in the country. The State Department of Decentralization and

Development has shown some desire to continue the project in 1969 although the joint arrangements will require to be changed in the light of our reorganization. No publications have yet arisen from the research; the temporary lecturer is using the research project for a Ph.D. degree. Research has continued in the field of organization theory under the direction of Professor Wills who hopes that a publication will arise from this research towards the end of 1969 or in 1970.

The development of business games in the field of Quantitative Methods has continued with lecturer Mr. D. Graham the main participant. There have, however, been no publications in this field.

In the field of Behavioural Science, senior lecturer W. A. Jarvis has in hand two research studies which relate to adolescent behaviour and counselling.

The staffing position has not been such as to permit any one member to devote more than a fraction of his time to research. Teaching loads have been unusually heavy in most cases as a result of the influx of new students to the M.B.A. programme and the new Graduate Diploma programme.

The services of some members have continued to be called upon to assist in the teaching of business and governmental executives. In addition, the Institute of Administration, with its rapidly growing spectrum of courses, has continued to call upon some members of the teaching staff to an increased extent.

The reorganization should make possible a substantial increase in the time available for research, especially by those members who have been regrouped in the new Department of Organizational Behaviour.

School of Economics

Research was carried out on a number of topics:

The theory of international trade and international capital movements; the micro-economics of technological change and national science policy; Japanese trade policies; econometric studies of the demand for various products in Australia and New Zealand, the Australian economy, Japanese economic policy; unbiasedness of mixed regression estimators; aboriginal problems and policies; wages and incomes policy and related matters in industrial relations; immigration policy and effects; an investigation of the application of principles of numerical taxonomy; the political economy of the British Raj; the economic development of Australia up to 1850; instalment credit and financial institutions in Australia and the South Pacific.

During the year Professor Nevile attended the Seventh S.E.A.N.Z. Central Banking Course at the Central Bank of Ceylon, as a visiting specialist.

The School was fortunate in having Dr. C. Moriguchi, M.A. (Kyoto), Ph.D. (Mich.), an eminent Japanese econometrician, and Dr. N. Kakwani, B.Sc., M.A., Ph.D. (Delhi), a distinguished statistician, as Visiting Professors.

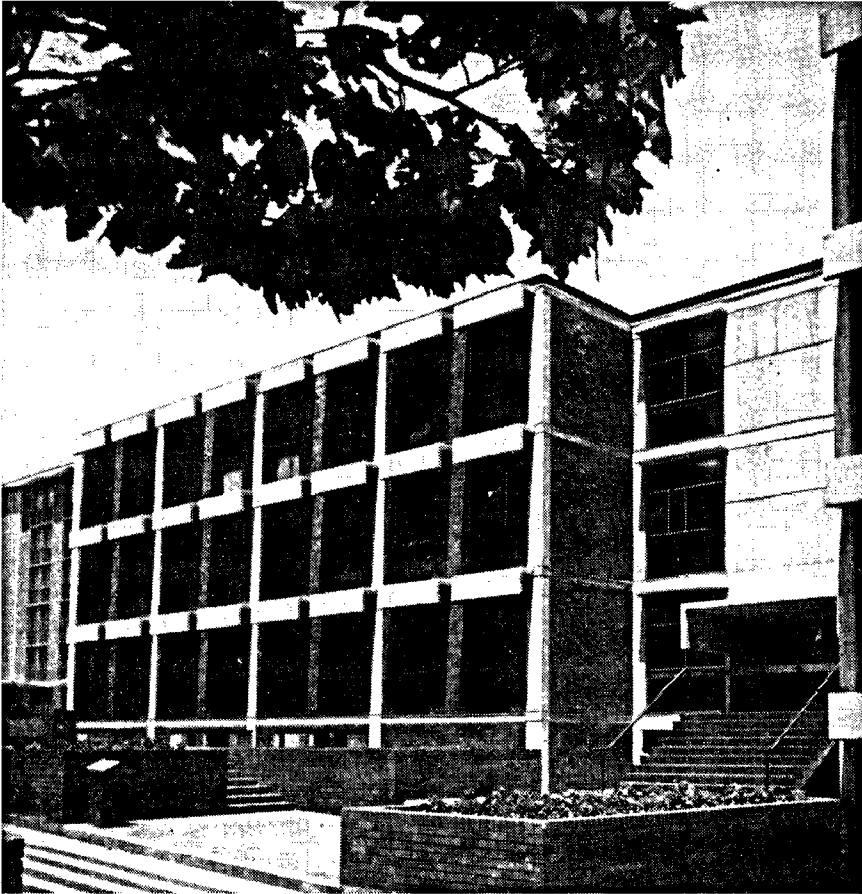

Two research grants from the Reserve Bank and two research grants from the A.R.G.C. were awarded to members of the staff.

Four books and a number of journal articles were published by members of the staff and six books are in preparation.

Department of Finance

The newly created Department of Finance was established in May, 1968. Research activities at this date are in the formative stages and have commenced with a systematic review of the finance literature with the object of formulating some basic themes relating finance to both the economic and behavioural theories of the firm.

This review has been necessitated by the major disagreements in the research outputs and rival theories of finance, suggesting the need for reflection and responsibility in the selection of research methodology.

The School of Architecture and Building.

The Department undertook the supervision of two candidates for higher degrees.

Department of Marketing

The interest in postgraduate work that was evident in 1967 has continued in 1968 with an increase in the number of graduates undertaking qualifying programmes or engaged in research leading to the degree of M.Com. This interest in research degrees is supplemented by the research activities of the Department as a whole. In 1968 two major investigations were set under way, financed by substantial grants from interested bodies; the first is in the area of assessing the effectiveness of advertising and the second is concerned with the attitudes of Australian management towards export marketing.

In addition to these major projects, staff members have undertaken studies in diffusion processes; in the application of Bayesian statistics to management decision problems and in some aspects of the management of a sales force. A number of journal articles have resulted from this activity.

It is planned to introduce an Honours Year into the undergraduate course in 1969 which will round off the undergraduate programme in Marketing that was first begun in 1967.

FACULTY OF ENGINEERING

Research Activities

Department of Structural Engineering

On the properties of concrete, research has embraced the application of energy criteria to the failure of concrete; elastic damping of concrete; elastic modulus of heterogeneous materials creep and drying shrinkage of concrete. Research into "creep and drying shrinkage" and multi-phase aspects of concrete shrinkage was sponsored by the C.S.I.R.O.

In the field of concrete structures, research comprised creep in concrete structures; reinforced concrete columns in biaxial bending; the numerical analysis of structures of non-linear materials; bond between concrete and reinforcement; reinforced concrete beams in combined torsion, bending and shear.

This last topic, which was initially sponsored by the Australian Road Research Board, is of particular interest in that it has provided information on which has been based a new clause in the Australian Code for reinforced concrete. This clause is a substantial improvement on the clauses in the Codes of other countries and may well provide a lead in this field. The topic "Creep Effects in Concrete Structures" is sponsored by the Cement and Concrete Association.

In the field of steel structures, research has been carried out on welding and connections in steel structures, and into the fatigue characteristics of connections.

In regard to theoretical methods of analysis, work has been directed

towards membrane effects in elastic grid-frames, folded plate roofs, plates in bending with singularities, non-linear analysis, and the use of singularity functions have all been investigated. Instability phenomena have received attention in the topics of lateral buckling of beams and trusses, and the stability of arches.

Dynamic analysis has been concerned with some aspects of gust loading on buildings and the earthquake response of structures. An extensive theoretical investigation into the gust response of flexible aircraft is continuing in collaboration with the Aeronautical Research Laboratories of the Department of Supply.

Department of Water Engineering

The major fields of research have been surface and groundwater hydrology; water resources; fluid mechanics and hydraulics; public health engineering and soil mechanics.

The Hydrology and Water Resources research programme includes 23 active projects supported by grants which in the current year total \$76,000 from the Australian Research Grants Committee, the Water Resources Council, the Water Research Foundation of Australia, the Rural Credit Development Fund of the Reserve Bank, the New South Wales Water Conservation and Irrigation Commission and the New South Wales Department of Main Roads.

In addition, 11 staff research projects have been active which include hydrological investigations based on data obtained from the School's experimental catchments and transferred to punched tape for analysis by computer. Significant progress has been made in a variety of studies including storm run-off from paved and natural areas, flood estimation, chemical methods of stream-gauging, hydro-economic studies of river valley development schemes and infiltration.

Fluid mechanics and hydraulic research at the Water Research Laboratory, Manly Vale, has been in the fields of flow of stratified fluids; thermal and sediment suspension density currents; deposition and erosion of sediment; beach erosion; the design of large pumping installations; low loss pipe flow and percolation. Much of this work has been stimulated and to some extent supported by the project studies amounting in cost to \$130,000 undertaken over the past year by the laboratory, mostly for the Electricity Commission of New South Wales. Other projects for clients included model investigation and field studies in connection with an arch dam; river pollution; reclamation and port development works. A grant of \$3,000 was received from the Australian Research Grants Committee for a continuation of the programmed density current studies.

The Public Health Engineering research has been directed mainly towards sewage treatment by the action of green algae, which provides a source of high protein food. This work is supported by the Water Research Foundation of Australia. The Sydney Metropolitan Water Sewerage and Drainage Board has provided a three-year Fellowship of value \$13,000 for the study of methods of reducing odours in sewers.

Soil Mechanics research has been concerned with the physical struc-

ture of desiccated and stabilized clays, with the aid of a major equipment item provided with the assistance of the Water Research Foundation.

Department of Surveying

An active research programme has been maintained and this has resulted in the publication of a number of research reports.

The main topics of research have been in the fields of physical geodesy; the theory and use of the gyrotheodolite; ground swing and zero error in the tellurometer; refraction; acuity of vision in photogrammetry and aerial triangulation.

These are all topics in which there is considerable current interest. The work being carried out will add to the store of knowledge being constantly accumulated, and this will flow back to the survey profession and will therefore improve the present methods and the accuracies being obtained in practice.

Two grants have been received this year from the Australian Research Grants Committee. One is an extension of the previous year's grant for the Physical Geodesy project and it has been used for expeditions to the interior of Australia for obtaining gravity readings at selected Laplace stations of the National Survey Network. The other is a new grant for the refraction project.

The gyrotheodolite project has been much assisted by the National Science Foundation which has made possible a visit of two staff members to Antarctica. Observations will be made there to obtain information about the gyrotheodolite's behaviour in high latitudes where its restoring couple is very much diminished. New methods of observation will be tested out to get the most effective results from the gyroscope's very slow rate of swing. On this visit refraction observations will also be made to supplement similar observations carried out by the Head of the Department during this year in Alaska.

Some interesting results have been obtained with regard to the tellurometer zero error, which tend to show that this is not constant but cyclic, as it varies with the value of the actual wavelength fraction that is being read.

Apparatus for the two photogrammetry and the refraction projects has been designed to facilitate the work being carried out, and all this apparatus has been constructed in the School workshop. A new gyroscope theodolite has been obtained.

Forty-five papers were published.

School of Electrical Engineering

Research activities are set out hereunder:

Department of Communications

(a) Work on mode conversion in waveguides has led to a new class of devices based on surface impedance variations and the work is continuing along these lines. A report is being currently prepared.

(b) Research in digital and adaptive systems has taken a new turn as outlined in (d) 2.

(c) The work on optical communications systems as started under the Australian Research Grants Committee grant has led to further development in instrumentation. Two prototype optical communications systems have been engineered and are undergoing tests. The results of the tests to date are most encouraging and a link between the University and the city is under construction. Associated work with lasers and modulation as well as regeneration of optical digital signals is progressing.

(d) The research programme on the use of microwave solid state devices is developing in two directions:

1. an investigation of Gunn effect, Reed and Impat devices for generation and control of microwave power;
2. an all-integrated digital microwave wide band communications system using a new concept which has arisen out of our work on microwave transistor tri-plate amplifiers.

This work will involve a great deal of laboratory microwave instrumentation and it will be possible to carry out such work in the coming year, as a result of the Australian Research Grants Committee grant just received in respect of this work.

Department of Control Engineering

During the year the Department has continued investigations into identification and optimal control methods particularly as applied to complex non-linear processes.

Physically realizable procedures are being developed for establishing suitable process models, estimating model parameters and process states and generating optimal control signals.

Much of the work has been related to the study of the Lamont steam generator located in the School of Mechanical Engineering. As a prelude to optimal control experiments, a 9th order non-linear model has been derived for this Lamont boiler. With the aid of a grant from the A.R.G.C. additional instrumentation has been installed and as a data link between the Schools is expanded to form a versatile link between the plant and the PDP8/AD80 hybrid computer in the Department this complex is being used as a pilot plant for various control schemes. For example the computer has been used to replace the 3-term controllers which are the normal plant controls. A number of identification procedures including pseudo-random binary noise methods have been used and a means of eliminating troublesome drift problems has been advanced.

A comparison has been made between nine schemes for iteratively improving estimates of the parameters and states in a model of a non-linear system. The convergence rates of the schemes have been investigated and where necessary steps taken to ensure the schemes converge under all directions.

Department of Electronic Computation

Development of a graphics data system has continued and is supported by an A.R.G.C. grant. The hardware system is now nearing completion and consists of a special purpose computer (Intergraphic) coupled to a distribution and terminal system based on television techniques. The object is to reduce the cost of general purpose graphical terminals. Software aspects of the project are also in progress and the majority of future effort will be in this area. A project in graphics languages is now nearing completion and will provide a foundation for further work. This has developed the application of formal grammars to graphics systems. A similar theoretical basis is being used in research on question answering systems.

Interest in computer languages has been maintained and a research project has started on the study and implementation of a computer for an extensible language. A growing area of interest is in the interplay between language design and machine design.

Research in speech recognition for computer input has continued in co-operation with the Department of Communications; research on digital control of motors has now been completed in co-operation with the Department of Electric Power; investigations have continued in co-operation with the Computing Centre in software developments to suit the special needs of the University; some developments have been made in application of new algorithms to the problem of optimum job scheduling.

Eight candidates are currently enrolled for higher degrees (six Ph.D., three M.Eng.Sc.) and two were awarded M.E. degrees.

Five papers were published.

Department of Power Engineering

(a) The present and future work in the field of electrical machines is and will be based on the application of thyristors to the control of conventional and new type motors. A variable speed digital synchronous motor has been successfully controlled over a speed range of 0 to $\pm 4,000$ r.p.m. and a commutatorless d.c. motor using induced e.m.f. commutation of the thyristors has been run up to 3,550 r.p.m. Some starting problems are currently under study.

(b) Financial support for the power system protection programme is continuing. Some of the best information from model studies was confirmed by actual fault recordings obtained from the N.S.W. grid at Yass. Computer programmes are being modified and alternate methods of computing fault impedance are being studied. The system model is being up-graded to test techniques for discriminating between faulted and healthy lines. Sequence networks have been added.

(c) Developments of methods of "on-line" measurement of the temperature rise of large transformers is continuing. Mains frequency changes are being correlated with power system fault conditions to ultimately enable on-line computer to control load shedding if and when necessary.

Department of Solid-State Electronics

Research in the Department is in progress in two principal areas: solid state and device physics, and integrated circuits. Aspects being investigated include recombination processes in silicon, germanium and indium antimonide; plasma effects at low temperature in indium antimonide; magneto-resistive thin-film devices; thermographic phosphors and their application to device reliability and failure mechanisms; epitaxial, oxidation, diffusion and photo-lithographical processes in the fabrication of silicon integrated circuits. Progress was made in the construction of a vertical laminar flow-clean room for integrated circuit fabrication; upon completion in 1969 it is planned that this will make a significant contribution to the research work of several departments in the School.

Nine full-time students are registered for higher degrees (Ph.D., M.E.) in the Department. The postgraduate courses offered in the areas of semi-conductor and device physics, and reliability continued in demand; it is planned to expand the range of courses in 1969.

School of Highway Engineering

Research was conducted on:

The effects of repeated loading on road materials: An automatic recording repeated load triaxial testing machine has been developed, which is capable of controlling the many complicated variables involved. This is being used to investigate the effects of repeated loading on road-making materials.

The accelerated curing of concrete: Electronically controlled electric curing equipment has been designed and used to investigate under very closely controlled conditions the effect of the composition of cement on the accelerated curing of concrete. It has been found that the gypsum content and the proportion of certain compounds present have an important bearing on the degree to which hardening of concrete can be accelerated by elevated temperatures. The fineness of grinding of the cement is being investigated and very great strengths have been obtained within a very few hours. The variation of the strength has been reduced to a level much smaller than anything previously attained.

The effect of cement variables on soil stabilization: The effect of the gypsum content and the fineness of grinding of cement is being investigated and it is probable that recommendations will be made for an improved kind of cement for use in soil stabilization.

The relaxation of Macalloy bars: The general pattern of the relaxation of Macalloy bars at an early age has already been obtained and the behaviour of bars under prolonged stressing is being investigated. The work will be extended to an investigation of the possibility of using lightweight concrete in prestressed concrete units used in bridge construction.

The measurement of the surface texture of road aggregates: An instrument is being developed for measuring the surface texture of road

stones. The effect of surface texture of road stones on the coefficient of friction of road surfaces is being studied and later it is hoped to link this variable with the workability of cement concrete and the stability of bituminous mixtures.

The effects of dynamic loading on structures composed of large prestressed elements: The vibrations caused in large prestressed bridge girders by moving and impact loads has been studied.

Other topics being investigated include: The measurement of the coefficient of friction of road surfaces at high and low speeds; the three dimensional planning of road alignment; the inter-relationship of various properties of composite bonded materials; the effect of repeated loading on the required road pavement thickness; the propagation of Rayleigh waves and Love wave through road base materials; the addition of fly ash to concrete.

School of Mechanical and Industrial Engineering

Research in the four Departments of the School was concerned with the following topics:

Department of Applied Mechanics

Dynamics of cold rolling; extrusion of metals; theoretical prediction of tool wear and tool life; strain rate effects in metal deformation; fatigue anisotropy due to plastic deformation; yield criteria; prediction of anisotropy; crack initiation in brittle solids and stress concentrations in plastically deforming solids; age hardening and the Bauschinger effect.

Non-linear studies in process control systems; fluid amplifiers; dynamic characteristics of car tyres and suspensions; mechanics of walking; variable speed mechanical power transmission devices; mathematical modelling of mechanical systems; optimization of process control.

Department of Fluid Mechanics and Thermodynamics

Flow of a bubbly fluid; two-phase flow through constrictions; mist flow in pipes; pure fluid amplification; flow of a refrigerant in a capillary tube; impact of a wedge on a free liquid surface; optimization studies in ship resistance; supersonic flow in a nozzle; supersonic flow over a blunt body; shock wave behaviour at a right angle bend; diabatic flow hydraulic analogy; study of a shock concentrator; freezing of foodstuffs (transient heat flow); transient heat flow in buildings; thermal mixing of two air streams; optimization of extended surface cooling coils; heat transfer across enclosed air cavities; flow through wire gauze screens; the influence of sound on natural convection; heat transfer from a sphere.

Department of Industrial Engineering

Production Technology: Mechanics of machining, extrusion, indentation; properties of materials at high strain rates; performance of carbide cutting tools; properties of machined surfaces; geometric analysis

of engineering designs; the application of probability theory to engineering tolerances; least-cost tolerances.

Operations Research: Studies in the efficiency of production lines; the preparation of university departmental timetables; the optimum reject allowance problem; operational simulation; variety reduction; problems of ore estimates; decision rules for mineral extraction; optimum procedures for the shearing of steel bars.

Department of Agricultural Engineering

Projects in progress include: Construction of improved stump-jump shanks for scarifiers; draft and wear of tillage tools; physical characteristics of hay during compression; flow phenomena of granular materials in open channels; development of instruments for measuring physical properties of agricultural soils; testing of seed metering devices.

Higher degree enrolments in 1968 were 18 Ph.D., 14 M.E., 96 M.Eng.Sc.—total of 128—and 47 Graduate Diplomas.

Nine reports and 16 papers were published by members of staff.

School of Nuclear Engineering

Research work focused on two main topics:

- (a) stochastic nuclear reactor modelling and reactor noise theory and analysis;
- (b) temperature and stress fields in nuclear reactor components.

Topic (a) involves both theoretical and experimental work, the latter utilizing the HIFAR research reactor of the Australian Atomic Energy Commission. The special purpose ISAC (Instrument for Statistical Analogue Computation) has been obtained for this purpose, and a high speed digital data acquisition system is being assembled to produce magnetic tape for subsequent time series analysis. This work, supported by an A.R.G.C. grant, is associated with system parameter estimation and on-line monitoring and control of nuclear power systems using noise analysis techniques.

Topic (b) is of a theoretical-computational nature, and aims at an understanding of localized temperature and thermal stress in realistic nuclear reactor components, where the non-uniformity of the heat transfer coefficient is significant. Both static and dynamic problems are under investigation.

Other research includes the prediction of ball flow in a pebble bed reactor and problems of neutron diffusion and heat flow in random media, exemplified by boiling reactors and fuel dispersions.

For both noise research and the enlargement of the repetitive analogue computing facilities of the existing TR-48 computer, the first stage of a digital expansion system (DES-30) has been acquired.

Ten papers have been accepted for publication.

M.Eng.Sc. project work includes the following: Optimal reactor shutdown by dynamic programming; frequency response of boiling reactor channels; two phase flow pressure drop; gamma heating by

Monte Carlo; free convection in fission product solutions; development of a nuclear battery; the theory and design of an isotopic powered nuclear generator.

An essential feature of these projects continues to be extensive computer programming and application.

School of Traffic Engineering

During the year the research activity of the School was maintained at a high level by staff and research students. There were two active Ph.D. projects, four Masters' research programmes and four minor research investigations being undertaken by M.Eng.Sc. students. The topics covered traffic flow phenomena, studies on the interaction between land use and transport with particular reference to the equilibrium and steady state performance of a land use/transport complex. An important current research interest relates to inter and intra modal assignment of traffic demands. In the field of vehicle performance, work is continuing on acceleration and deceleration characteristics and a new project on the accuracy of aiming vehicle headlights is being carried out.

Approximately 20 papers reporting the work of the School were published.

FACULTY OF MEDICINE

School of Anatomy

Research in the School was mainly centred around investigations into the ultrastructure and histochemistry of neuroglial cells, and was directed towards elucidation of glia-neuronal functional relationships.

New investigations in progress include investigations into the ultrastructure of retinal neuroglial elements and into the uptake of particulate material by cells within the central nervous system. Problems of myelination have also been brought under review.

The main significance of the work lies in its relationship to understanding of the demyelination disease multiple sclerosis. Research is also being undertaken into the pattern of neuronal organization in the complex of trigeminal nuclei in the brain stem. The work continues to attract support from the National Health and Medical Research Council.

Members of staff were responsible for 15 publications.

School of Human Genetics

Research work on population genetics was undertaken in collaboration with Mrs. Georgeda Bick, a social anthropologist in New Guinea from Columbia University; with a large expedition headed by Dr. Albert Damon to the British Solomon Islands and Bougainville from Harvard University; with continuation of earlier work in the Markham Valley by Dr. Eugene Giles of Harvard University and temporarily of the

Australian National University; and with Dr. Peter Sinnett of the Department of Clinical Sciences, Australian National University.

In all instances the blood groups and some serum polymorphisms and on most occasions the acid phosphatase polymorphisms were determined on blood specimens. Dermatoglyphic analysis has also been included in some populations. Work has continued on the nature of the chemistry of hair pigments in man and in lower animals, on glucose-6-phosphate dehydrogenase activity in red cells of several species and on the activity of other enzymes in red cells and tissues. An investigation of chromosomes is occasionally undertaken but it is not desired to provide a routine service from the School in this field.

Nineteen papers by members of the staff were published and a number accepted for publication.

School of Medicine

Research was carried out in the following fields:

Cardiovascular disease: Mitochondrial structure and function in heart muscle; catecholamine depletion and cardiac function; quantitation of pulmonary oedema; diet, hypercholesterolaemia and coronary heart disease; mode of action of hypocholesterolaemic drugs; ultrasonics in cardiac diagnosis.

Neurology: The effect of vibration in reducing conduction in peripheral nerves, suppressing spinal cord reflexes and altering the reaction of cerebral cortex to sensory information; serotonin release from platelets in migraine headache; experimental neuropathy and permeability of small blood vessels.

Endocrinology: Iodide metabolism and iodide goitre; thyroiditis; thyroid function in the opossum; aldosterone; androgen metabolism.

Lung disease: Pulmonary mechanics in emphysema and asthma; pulmonary vascular reactivity; chronic respiratory disease in Australian aborigines; ventilatory response to dusts inhaled at work; pulmonary function in asthma.

Gastro-enterology: Alcohol and pancreatic function in man and experimental animals; absorption of antibiotics in man; lactase deficiency in Asians; liver transplantation.

Kidney disease: Transplantation; action of diuretics.

Infectious diseases: Epidemiology and clinical manifestations of viral infection.

School of Obstetrics and Gynaecology

Investigational activities during 1968 centred round gynaecological endocrinology and renal tract infection during pregnancy.

The effect of clomiphene and sexovoid on L.H. secretion by the pituitary and the degree of ovarian responsiveness to endogenous L.H. and exogenous H.P.G. was studied in patients with ovulatory failure.

Work continued on the effectiveness of incremental formulations on

fertility control and an evaluation of the progestogen pill was carried out.

The incidence of asymptomatic bacilluria in pregnancy was determined. When both the leucocyte excretion rate and antibody titre are elevated, the rate of prematurity is raised. This work suggests that the infection itself rather than the associated renal damage is the cause of the prematurity which may be due to the oxytocic effect of a toxin from the infecting organism. A Honeywell transducer and recorder has recently been obtained to measure uterine muscle contractility under the influence of various bacterial toxins.

A comparison of the duration of effective anaesthesia obtained by injection into the epidural space (by the caudal route) of Bupivacaine and Lignocaine is in progress. Interim results confirm that Bupivacaine is effective for twice as long as Lignocaine.

An investigation is being conducted into the incidence of degenerative arterial disease in women subjected to bilateral oophorectomy prior to the menopause.

School of Paediatrics

Research activities were as follows:

Haematology (Dr. D. W. O'Gorman Hughes): Bone marrow depression: Studies with chloramphenicol and its toxicity and in the reversal of toxic changes by phenylalanine and B group vitamins continues. Studies continued in aplastic anaemias in related syndromes.

Foetal Haemoglobin: Various techniques were introduced in order to compare the accuracy and applicability of the techniques.

Thrombocytopaenia in Childhood: The clinical and haematological study extending over the past three years has been undertaken. This appears of special importance in the newborn.

Leukaemia: An evaluation of therapeutic regimes is being conducted in association with the National Acute Childhood Leukaemia Study Group.

Muscular Dystrophy (Dr. J. B. Campbell, Dr. W. de Chair Baker): Clinical, biochemical and histological studies of patients and possible and probable carriers were continued.

Dental Caries (Professor John Beveridge): The controlled clinical trial to prevent dental caries which commenced in 1965 was completed at the beginning of 1968. The data is being evaluated.

Nutritional Studies in Newborn Infants (Associate Professor L. H. Stevens): A continuation of studies on babies of low birth weight. The study of the metabolism of nitrogen, sodium, potassium and calcium, magnesium and phosphorus. A series of reports is now being prepared for publication. Immunological studies of susceptibility to infection in newborn infants are continuing with particular reference to low birth weight babies. This research will be partly supported by the National Health and Medical Research Council grant of \$3,500 in 1969. An interim report is being prepared for publication.

A prospective study of clinical, biochemical, nutritional, haemato-

logical, microbiological and development aspects of progress in babies who are dysmature, premature and full-term (as controls) was initiated in 1967 and is continuing.

A study of the social characteristics of families into which premature babies are born has been conducted in association with the Department of Social Work. An evaluation of this data is now complete and will be submitted to the literature in the form of three separate reports.

Respiratory Problems in Childhood (Dr. J. M. Gupta): The comparison of oxygen tension of capillary blood with arterial blood. This is a preliminary study and it is hoped that when the technique is perfected, more extensive research in this field will be undertaken.

Biochemical investigations in infants undergoing surgery. Aim is to determine changes in acid base balance in newborn infants undergoing operations for congenital abnormalities. It is hoped to formulate lines of treatment to reduce mortality in such infants.

Psychiatric Research (Dr. B. Nurcombe): An investigation has commenced into the Reservoir Syndrome.

Follow-up study of intellectual and emotional development of premature, postmature and dysmature babies was commenced to supplement study by Associate Professor L. H. Stevens.

Study of the emotional disorders in adolescence was commenced.

Study of the emotional development of aboriginal children was commenced.

Publications

Dr. R. J. Lewis completed his thesis on "Sequelae of Foetal Malnutrition" during 1968 and submitted it for examination. In addition, 19 papers were published.

School of Pathology

The main fields of research work included:

The Inflammatory Response

(a) The pattern of increased vascular permeability in hypersensitivity, surgical incision, crush and ultrasonic injury.

(b) The isolation of homogeneous preparations of iota toxin of *Clostridium welchii* and a study of its relatively prolonged effects on vascular permeability.

(c) The distribution in the peripheral vascular bed of the effects of various types of injury, identified by the "carbon labelling" technique.

(d) Continuous recording of increased vascular permeability.

(e) Effects of anti-inflammatory factors on the healing of experimental wounds.

The above work continues the School's studies of fundamental aspects of the inflammatory response, with particular attention to the mechanisms involved in the characteristic increase of vascular permeability.

The Regeneration of Blood Vessels in Autografts

Mechanisms of delayed hypersensitivity: Tissue clearance of antigens; transformation of blast cells *in vitro*; preparation of conjugated chemical antigens. New evidence was obtained to suggest that "transformation" is stimulated by the direct contact of chemical antigen with the cell membrane of lymphocytes.

Malignant disease: Survey of carcinoma of cervix and tumour registry.

The role of 5-hydroxytryptamine in migraine: This work continues studies to elucidate the biochemical changes leading to the symptoms of migraine.

Catechol amines and serotonin in neural crest tumours.

Metabolism of melanin.

Hydroxyproline in renal disease and renal transplants.

Drug addiction: Diagnosis of drug addiction and improved methods of diagnosis.

Biochemistry of blood platelets in health and disease.

Division of lymphocytes in the presence of phytohaemagglutinin.

Cytogenetics and sex abnormalities.

Antibiotic control in the therapy of bacterial infection.

The above research work was supported by grants from the National Health and Medical Research Council of Australia; the Asthma Foundation of New South Wales; the Laura Bushell Trust; United States Public Health Service; Australian Atomic Energy Commission; the Institute of Criminology (University of Sydney); New South Wales State Cancer Council; the Cancer and Surgical Research Appeal Fund of the Prince of Wales Hospital; Messrs. Geigy (Australia) Pty. Ltd.; and Messrs. Merck, Sharp and Dohme (Aust.) Pty. Ltd.

Nine candidates were registered for higher degrees (three for M.D., and six for Ph.D.).

School of Physiology

Research was conducted on the following topics:

Cardiovascular Physiology: This work has investigated the role played by certain centres of the brain in the control of circulation in conditions of hypoxia.

Neurophysiology: Investigation has been made of the information transfer within the central nervous system. Particular attention has been given to the ability of neurones in the trigeminal system to convey information to the brain concerning the intensity of mechanical stimuli in the region of the face.

Respiratory Physiology: Work has been done on the rate at which the different haemoglobins of the sheep can release oxygen for use by the tissues. Sheep have different haemoglobin molecules and the haemoglobin found in any sheep appears to be particularly related to the needs of the individual animal. The different haemoglobins have been investigated, their respiratory properties compared and correlated with the needs of the sheep.

Gastro-intestinal Physiology: Work is in progress on pathways of fat absorption in the gastro-intestinal tract of the sheep and the formation of bile in the sheep liver.

Work has commenced on the physiology of the neuro-muscular junction.

The research work of the School has been supported by the Australian Research Grants Committee; the National Health and Medical Research Council; the National Heart Foundation; the Life Insurance Medical Research Fund; the Joint Coal Board of New South Wales and the United States Public Health Service.

In addition to the publication of results in journals, five staff members presented papers at the meeting of the Australian Physiological and Pharmacological Society held in Canberra in May.

Two Ph.D. candidates submitted theses during the year and there were two candidates registered for the degree of M.Sc.

School of Psychiatry

Research activities were as follows:

The Phenomenology of Depressive Illness: This is a study of the clinical, psychological, physiological and social variables related to depression.

Studies in Stuttering: To investigate the hypothesis that recovery from stuttering would be improved in both quality and duration if psychotherapy were used in addition to the formal habit training with syllable-time speech.

Australian Ethnopsychiatry: The School conducts a project on Australian ethnopsychiatry which aims to establish an objective knowledge of the psychiatry of the aboriginal Australians, both in their traditional and their transitional cultures.

Human Ecology of the Arid Zone: Studies of adaptational problems in outback Australia. A field psychiatric service is maintained by the School in the Upper Darling region of New South Wales to gather epidemiological data and to determine the type of service best suited to sparsely populated regions.

Psychiatry in the New Guinea Islands Region: Epidemiological data gathered by psychiatrist and social worker, supervised by the School.

Aversion Treatment of Homosexuality: Investigation of two forms of aversion therapy—apomorphine and conditioned avoidance of electrical stimuli.

Treatment of Enuresis: Controlled study of value of drug and conditioning therapy.

Ten candidates were registered for higher degrees and six papers and two chapters were published.

School of Surgery

Research activities were as follows:

Studies in platelet function and lipoprotein lipase: Disturbances in these have been sought in patients with prostate carcinoma, patients

receiving synthetic oestrogen, normal subjects taking the contraceptive pill, and in animals after splenectomy and following haemorrhage.

The haemodynamic effects of haemorrhage: These studies have been made on animals, and have included measurements of fluid compartment changes, blood flow and resistance changes in the gut, liver, muscle and skin.

The effects of caval interruption on lower limb venous outflow resistance: Patients have been studied by phlebography, and by a plethysmographic technique.

Autoregulation in human skin: Pressure-flow characteristics of human hand and forearm skin.

The behaviour of the perfused pig liver: This has been studied in terms of blood flow and biochemical function.

The perfused isolated pancreas: Preliminary work has been done to develop a satisfactory preparation.

Experimental cardiac transplantation: This has been undertaken in dogs as a short-term experimental procedure.

Fluoresceinophthalmic angiography: The vasculature of the human eye has been examined by this technique, combined with high-speed photography.

Drug trials: These have been conducted in the laboratory and in man, chiefly in the field of anaesthesia and related drugs.

Peripheral control in micturition: The role of the external sphincter has been investigated by electromyography and cineurethrography and sphincterometry.

Communications to learned societies covered the following: Royal Australasian College of Surgeons (7); Surgical Research Society of Australasia, Seventh South African Urological Conference, B.M.A.-A.M.A. International Congress (3) each: Australian Physiological and Pharmacological Society, Urological Society of Australasia, Royal Australasian College of Physicians, Australian Association of Anaesthetists, Neurosurgical Society of Australia (one each).

Twenty-three original papers and one book were published.

FACULTY OF SCIENCE

School of Chemistry

Research activities continued to cover a wide area and are best considered under separate departmental headings.

Department of Physical Chemistry

The Department's research effort was in the following fields: Energy transfer in molecular collisions; high resolution and far infra-red spectroscopy; applications of electron spin and magnetic resonance studies to chemical processes; homogeneous and heterogeneous catalysis; pyrolysis of alkyl halides in the gas phase; kinetics and mechanism of fluorine reactions; structures and reactions of polyvalent iodine compounds; mass

spectrometry and radiation chemistry of alcohols and alkyl halides; conductivity studies of charge transfer complexes; radiation copolymerization; thermodynamics and equilibrium in liquid solution; reactions and adsorption at electrode surfaces including the kinetics of the oxidation of ferrous ions and the study of electrode impedance; and in the colloid field, studies of surfactants and particle size. Work has commenced in the field of chemical physics, in particular in the application of quantum mechanics to electron and nuclear interactions.

Department of Inorganic Chemistry

Research work was concerned with metal complex compounds and the investigation of their structures and properties of various physicochemical techniques, including infra-red and visible-ultra-violet spectroscopy, X-ray crystallography, magnetic susceptibility measurements, including variable-temperature magnetic studies, and thermogravimetric analyses. Selected metal complexes are being tested for anti-cancer activity in U.S.A. and two compounds have been found to be carcinostatic.

Department of Organic Chemistry

Advances were made in the chemistry of natural products of plant and animal origin. Structural and synthetic studies in carbohydrate chemistry, steroids and triterpenes, mould metallobites and organophosphorus compounds are among the research interests of the Department. A useful synthesis of the insect juvenile hormone has been completed.

Department of Analytical Chemistry

Contributions to research were made in four areas: (i) The catalytic behaviour of high-ligand-field complexes, particularly in reactions involving hydride complexes either as catalysts or as postulated intermediates. (ii) Radiation induced grafting of monomers on to cellulose, leading to the production of new types of ion exchange paper for paper chromatography. (iii) Polarography—Correlation of $d \rightarrow d$ transitions and half-wave potentials of N-methyl substituted ethylenediamine complexes. (iv) Solvent extraction—Computer techniques in the analysis of solvent extraction data of Schiff-base complexes.

Department of Nuclear and Radiation Chemistry

Principal research activities centred around: Recovery of thorium from monazite by ion exchange and solvent extraction; the Szilard-Chalmers reaction; relationships between positron lifetimes in polymers and their physical and chemical properties; mass spectrographic studies of ion-molecule reactions in halomethanes; radiocarbon dating of a variety of plant and animal remains; tritium dating of alluvial waters.

Department of Applied Organic Chemistry

Research continued in the areas of autoxidation, polymers and hormone chemistry. In the latter field, in co-operation with the School of Pathology, a method was developed which allows, for the first time, the

quantitative monitoring of changes in vascular permeability following injury.

X-ray Diffraction Laboratory

The compounds being examined by X-ray diffraction methods were mainly organo-metallics but some structure work on organic molecules, stable phases in binary oxide systems, and also some mineral structures were being determined.

Ten grants were received from the Australian Research Grants Committee of which the largest was \$70,750 awarded to Professor G. W. K. Cavill and Dr. P. L. Robertson for studies of insect venoms, attractants and repellents. This grant will enable the School to purchase a modern mass spectrometer. The 100 MHz nuclear magnetic resonance spectrometer purchased with the aid of one of last year's grants is now operating.

There were 92 students studying for higher degrees: 56 Ph.D., six full-time M.Sc., 23 part-time M.Sc., seven external M.Sc. Of these, 23 held Commonwealth postgraduate awards and 21 held other postgraduate scholarships.

Staff and students of the School published a total of 93 research papers.

School of Mathematics

The following topics were under investigation:

Department of Pure Mathematics

Structure of geometries with spinor-type connection; algebraic theories in cartesian closed categories; iteration of functions of more than one variable wild knots; perturbation theory; topology; a canonical basis for ideals; integer elements over a commutative ring; study of limit cycles of an autonomous system of differential equations; number theory; distributional limits and summability theory; structure of certain p-groups; algebraic methods in topology; groups of nxn matrices; fractional iteration of rapidly increasing functions; rational approximation of functions; non-linear programming; isotopy of links; divisors of certain quadratic polynomials; geometries with general linear connections; abstract functional equations; spectral theory in banach spaces; exact solutions of the transport equation; matrix representation of rings; point evaluation of distribution and summability theory; analytic functions of operators; combinatorial block designs and hadamard matrices.

Department of Applied Mathematics

Nuclear Physics: Nuclear 3-body problem and nuclear forces; nuclear body problem; charge asymmetry of nuclear forces and u-mesic atoms.

Statistical Physics and Kinetic Theory: Many body problems; application of perturbation theory to the electron gas and other systems; kinetic theory of sound in polyatomic gases, zero sound, shock waves; lattice statistics with both long and short range interactions; numerical

asymptotic analysis in the theory of co-operative phenomena; solid state transport theory and liquid metals, thermal expansion, 3rd virial coefficient; stochastic models in chemical kinetics, models for enzyme kinetics, random walks.

Astrophysics: Cosmic ray sources in the galaxy and radio sources; stellar opacities.

Theoretical Oceanography: Long period oscillations of oceans and basins; edge waves on continental shelves and oceanic ridges.

The Department held two grants from the Australian Research Grants Committee in 1968.

Department of Statistics

Discrete distribution theory: estimation procedures; various special distributions (Poisson Binomial, Poisson Pascal); estimation under restrictions on the parameter space.

Sequential analysis; tests for two sided alternatives; an optimum sequential test for a model in sampling inspection.

General statistical inference: Bayesian inference; Bayesian sequential tests; Bayesian inference in time series.

Stochastic processes: stochastic models in carcinogenesis; chemical reaction kinetics: queueing theory and traffic congestion.

Experimental design; analyses when the usual assumptions are not valid; abstract algebraic correspondence in complex experiments; competition experiments; complex fertilizer experiments.

Non-linear programming; computer comparisons of alternative algorithms.

Multivariate analysis: powers of multivariate tests of significance; correlation techniques.

Non-parametric methods in statistics; extreme values.

Computer non-linear least squares analyses.

Sample survey design.

Department of Mathematics

Initial value problems in water wave theory; special relativity and cosmology; gradient elution adsorption chromatographic systems; non-linear kinetics of chain reactions; non-uniformly illuminated $p^+ - n$ junction; mathematical economics.

Sixty-four candidates were registered for higher degrees.

Three Ph.D. degrees and one M.Sc. degree were awarded.

Fifty-five papers and one book were published.

School of Physics

The major research activities were directed towards the following fields of the work:

Atomic Physics

The main research work of this group is directed toward measurement of atomic cross sections for electron impact excitation to levels

of astrophysical interest. Work is proceeding on the high energy resolution study of sodium D—line excitation, differential inelastic electron scattering of sodium, electron impact ionization and excitation of magnesium—absolute measurements, relaxation of keV helium metastables in collisions, design of an experiment controller and data logger, dissociative electron impact excitation of Balmer lines from H_2 and absolute calibration of helium excitation cross sections.

Acoustics

Members of the Physical Acoustics Group are primarily engaged in studying the influence of gamma and neutron irradiation on the mechanical properties of alkyl-halide crystals.

Allied projects include a study of deformation effects in these crystals and a study of the correlation between dielectric loss and internal friction.

Wave propagation problems in crystals deformed under hydrostatic pressure, wave propagation in layered materials and the impulse response of acoustical materials are also being studied.

Biophysics

The main emphasis of research in biophysics was concerned with membrane transport phenomena and consisted of experimental work on ion transport through artificial bimolecular membranes and measurements of permeability coefficients of organic molecules such as glucose using radioactive tracers; the investigation of the mechanism for the maintenance of non-equilibrium ionic concentrations in living cells, using both artificial systems and a continuous culture apparatus built up during the year; theoretical studies of the irreversible thermodynamic description of transport processes; electrical characteristics of artificial membranes using the recently acquired Vector Impedance Meter; characteristics of fixed charge membranes using cells of *Chara-australis*; the determination of the equivalent cardiac generator and the computer simulation of the resultant electrocardiogram and glucose control systems.

Dielectrics

Studies on high field conductivity and electrical breakdown in alkyl-halide crystals were continued. Further work was also carried on at high fields with the ferroelectric crystals A.D.P. and $NaNO_2$, and with solid argon. Mechanical effects accompanying the application of a high field to a dielectric were also under study and work was initiated to determine the products resulting from the high field electrolysis of sodium chloride.

Temperature

Measurements of the spectral emittance of zirconia were made at temperature up to $2200^\circ C$ and over a wavelength range of 0.5 to 0.7 microns. Preparations are being made to make measurements at wavelengths up to 4 microns.

The study of micrometeorites as a source of nucleation of ice crystals

was continued. The micrometeorites were produced by boiling meteoritic material at pressures of approximately 1mm. This is similar to the conditions under which they are produced in nature.

Work has commenced on the measurement of electrical conductivity of magnesium oxide at temperatures up to 2200°C. The temperatures are obtained either with the aid of the solar furnace or by using a graphite resistance furnace. The equipment has been built and some measurements have been taken.

Ionic Solids

The transfer of momentum and matter in solids under energetic particle irradiation is the central interest of the group. The ultimate aim of this work is to evaluate the inter-atomic forces in solids, particularly in metals and ionic solids, and to understand the processes by which defects are formed and change in crystalline solids. The main fields have been X-ray diffraction topography; proton channelling through epitaxial gold foils; measurement of thermal broadening of Wehner Spots from gold; development of a multi ion source to provide energetic ions of gold, copper or most other elements; measurement of the energy spectrum of sputtered copper atoms by particle multiplier methods; experiments on Focusons in alkyl halides and measurement of the energy spectrum and direction of ejection of positive ions scattered from potassium chloride bromide and iodide by argon bombardment.

Low Temperatures

The main field of work has been solid state research at liquid helium and higher temperatures. At present the central interest is in the electrical properties of solids. Experimental work on the "hot electron" effect in indium-antimonide has been completed and research continued on the dielectric properties of semi-conductors at low temperatures. The tunnelling of electrons through a thin insulating layer sandwiched between super-conductors and the measurement of conductivity of narrow channels split into a single crystal of germanium has also been carried out. Work has also been conducted on the forces arising when a super fluid flows around a hot body.

Nuclear Magnetic Resonance (N.M.R.) Laboratory

The following three major projects, involving pulsed N.M.R. techniques, have been initiated and are progressing satisfactorily:

Apparatus has been constructed for the measurement of the self-diffusion of water in systems of biological interest by a spin-echo method employing pulsed magnetic field gradients. Preliminary measurements have been made on the wool-water system and on certain muscle tissues.

Thermal transitions in collagen are being investigated by measuring the variation in the proton spin-spin relaxation time with temperature. A study of the activity and metal ion binding mechanisms in enzyme-substrate systems is being carried out by the observation of their influence on the spin-lattice relaxation time of the solution.

Rock Magnetism

Work has proceeded on the synthesis of high purity iron-titanium oxides and on the control of the oxidation of magnetite. A furnace and gas mining unit has been brought into operation. Measurements are also being made on rocks to elucidate the magnetization process and also on natural magnetites to check the theories of the acquisition of thermo-remanent magnetization.

Crystallography

A wide range of activities has been pursued, ranging from a theoretical and experimental study of bonding in crystals to the solution of the crystal structures of organic and organo-metallic compounds. Comparisons of different methods of structure determination are being made, which involves the writing of computer programmes. The new automatic single-crystal diffractometer has been installed and is working very satisfactorily.

Theoretical

Work was mainly on the problems connected with the indefinite metric formalism in the quantum theory of the electromagnetic field. A possible new interpretation for the gauge-function of the field was obtained. Certain difficulties in the formalism were investigated and partially resolved.

School of Applied Physics and Optometry

Department of Applied Physics

The only research activity taken over as a going concern into the Department when the latter was newly formed on 1st July, 1968 was in the field known as Vehicle Physics. In this area, research development has continued on matters of road safety.

Development of anti-collision radar devices for use on moving vehicles was continued. Work on aspects of friction between tyres and roads was greatly aided by a grant from Olympic Tyre and Rubber Company. The development of a new type of driving simulator has been nearly completed.

The group has three higher degree students, two of whom are part-time.

Department of Optometry

Research activities were as follows:

Corneal Topography: Work continued in the development of an accurate measuring technique and mathematical analysis of the topography of the corneal anterior surface.

Flicker Fusion: The C.F.F. is being investigated with special reference to factors that alter fusion frequency as the stimulus is moved away from the fixation point.

Electro-oculography: Work was aimed at improving both sensitivity

and signal to noise ratio of the apparatus in order that more refined measurements could be taken of the relative velocity and acceleration of movement of each eye.

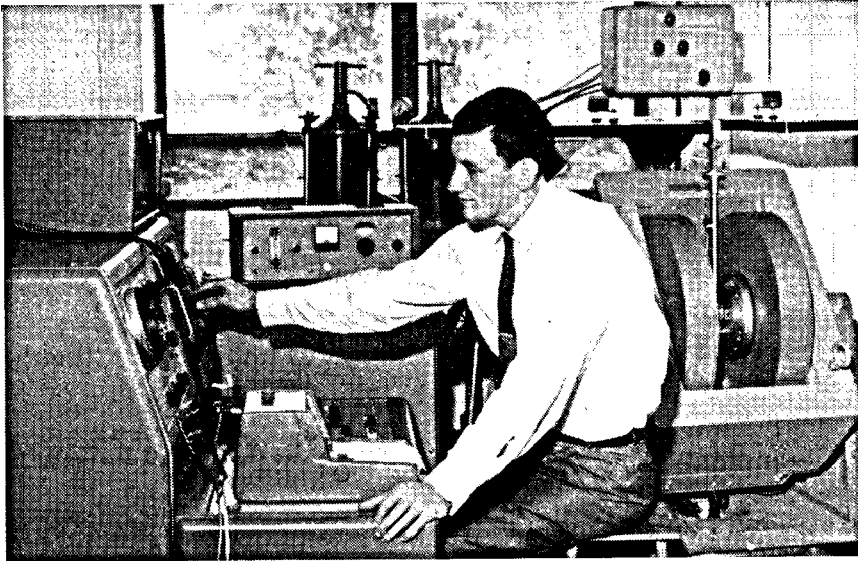

Dynamic Stereopsis: A pilot study indicated that modifications to the equipment are necessary to increase accuracy of stimulus input. The work is in progress.

Dynamic Visual Acuity: Variation in monocular and binocular visual acuity is being investigated in response to moving stimuli.

Pre-school Vision Study: Variation in the visuo-sensory response with observation distance is being investigated in the three to five years age group.

Six candidates were registered for higher degrees.

Four papers were published.

An Electron Spin Resonance Spectrometer used in study of broken bonds on vacuum crushed semi-conductor surfaces.

BOARD OF STUDIES IN GENERAL EDUCATION

Department of General Studies

The following research was carried out:

English: A study of the structure of the English Language; comparative study of certain 20th century novels which have in common the attempt to create the sense of a more-than-human force operating in human affairs, and a study of Dickens' later novels.

Psychology: Studies of the developmental concepts of Jean Piaget and two studies of inter-modal conflict in the general context of human orientation, one involving conflict between vision and the body senses; the other involving conflict between touch/kinaesthesia and audition.

History: A study of the early naval history of the Australian colonies before Federation.

Philosophy: Logical analysis of early music notation and of associated concepts and theories.

General: The place of liberal studies in engineering education, and a survey of the cultural background of students entering Faculties other than Arts in this University.

DIVISION OF POST-GRADUATE EXTENSION STUDIES

The research activities were in the area of mass-media techniques for postgraduate education and human communication. Specific projects were: (TV-MISS television multiplexed image sequenced switching); optical switching of TV image for investigating perception at the receiving end; lecturer operated television production console; PATOREL (programmed automatic teaching operations by radio and television).

An R.C.A. TR5 video-tape recorder was acquired to be used in conjunction with the above research projects as well as for teaching.

One paper was published.

STUDENT COUNSELLING

Counselling Research

Operational research studies included: Development and validation of therapeutic techniques in the treatment of stuttering (e.g. a token reward system); factor analysis of the Barrett-Lennard Relationship Inventory; a continuing literature survey of studies evaluating aspects of counselling; tutor-student relationships and student progress; validation of a variety of measures of vocational interests and preferences; evaluation of Shapiro's repeated-measure approach to studying counselling outcomes.

Student Life Research

Exploring the role of the Unit in bridging the school-university gap and the generation gap; an accommodation survey in collaboration with N.U.A.U.S.

Staff Postgraduate Research

The following studies have been completed in 1968, or significant progress was made:

Invariance of vocational interest factors; study of readability in relation to reading requirements of university students; family dynamics and behaviour modifications; inter-role perception in a therapeutic community; an investigation of some aspects of the body-image boundary dimensions; information processing approach to cognition; the body-image boundary and penetration concept as a variable in adjustment to stress with paraplegics and quadraplegics.

BOARD OF VOCATIONAL STUDIES

School of Hospital Administration

Research was conducted on: Nursing services in Victoria; effects of automated laboratory testing upon hospital services; hospital provision and utilization in Australia from 1901; geriatric patients in public hospitals (a morbidity study); Australian hospital statutes.

School publications have covered: The short-stay public general hospitals of Australia; the administration of lunacy and idiocy in New South Wales 1781-1855; schoolgirls' interest in nursing as a career; the role of the hospital board; bed demand forecasting; administrative manpower study (two volumes). The second edition of the *Australian and New Zealand Hospital and Health Services Yearbook* was produced in March.

Department of Industrial Arts

The relevant body of knowledge for the study of Industrial Arts is to be found in the relationship between man and materials and his environment. This knowledge can be used for a number of purposes including such areas of human endeavour as education, occupational therapy and design.

The Department of Industrial Arts is therefore interested in not only contemporary technology but also ancient technology; not only modern industrial materials and processes, but also the history of the development of processes and materials. Moreover, the focus of interests for the Department in all of these things is man himself. Ethno-technology is thus a major research area and currently two research programmes are operating. The first is concerned with the ethno-technology of the aboriginal people and the second with the ethno-technology of the people of South Asia. When finance and other facilities become available, it is

planned to commence a research programme into contemporary technology in Australia.

The programme of research into ethno-technology of the aboriginal people is a co-operative research programme involving the Research Section of the Northern Territory Administration which is providing financial support, the Department of Industrial Arts and Unisearch Limited.

Basic work on aboriginal skill patterns has been completed and a research unit which will test methods of implementing knowledge from this basic research has been established at Darwin. A team led by Mr. Michael Cardew, the well-known British potter, is currently experimenting with the training of aboriginal craftsmen, while Mr. Terry Kirk and Mr. John Grant have established courses for the education of aboriginal teaching assistants in the use of ceramic material.

Plans are being made to continue this work in 1969 and to establish another pottery at the Port Keats Aboriginal Mission Station.

Co-operative research with the Smithsonian Institution, Washington, D.C., has now been placed on a systematic basis, and Associate Professor L. M. Haynes was invited to Washington in April to confer on the projects.

This programme, which has become known as the Co-operative Smithsonian Institution-University of New South Wales Programme into the Ethno-Technology of South Asia, owes its origin to the late Dr. Hans Wulff, who was also the first student to undertake Ph.D. studies in the Department of Industrial Arts. During this coming research season (November-February) work will be carried out in Ceylon and Pakistan. The research which has been generously supported by the Smithsonian Institution, is likely to be extended to other South Asian countries.

The results will be published by the Smithsonian Institution as joint research monographs with the University of New South Wales.

There were four publications by members of the staff.

School of Social Work

Staff members, assisted by students as part of their field training, have continued with a number of research projects, particularly in the area of community development. A number of voluntary organizations and communities have sought assistance in the planning of decentralized welfare schemes and to the extent that staff time has permitted, a great deal of valuable collaboration has occurred. As School resources develop it is anticipated that further research will continue in this area.

In collaboration with Associate Professor L. H. Stevens (Paediatrics), work has continued with research into problems associated with premature birth.

WOLLONGONG UNIVERSITY COLLEGE RESEARCH

Division of Biological and Chemical Science

Department of Biological Science

Research was carried out on the physiology of crickets.

Department of Chemical Science

Research was conducted on: Alkaloidal constituents on *Tylophora crebriflora* and related plant species; the anti-leukaemia activity of tylocrebrine; synthetic studies on phenanthroindolizidines and on their synthetic intermediates hallucinogenic fungi; kinetic studies of hydrolysis of amides and ortho-substituted aryl esters; thermodynamic acidity constants; synthesis and magnetic properties of copper (II) complexes; and catalytic exchange reactions.

The Australian Research Grants Committee awarded grants to members of the Department: Phenanthroindolizidines and Anti-Leukaemia Activity (\$4,010); Substituent Effects on Acid Ionization Processes (\$1,250). Local organizations donated \$688 in support of the anti-leukaemia research programme and promised further support.

Fifteen candidates were enrolled for higher degrees; one candidate was awarded the degree of M.Sc.

Three papers were published and three research papers were read at R.A.C.I. conferences in Sydney.

Division of Commerce

Regional economic studies continued to be the major research activity, involving all members of the staff. In general terms, these aim to isolate growth sources, growth impediments and problems stemming from growth in Wollongong and the surrounding region.

More specifically, during 1968, research was done on the transportation systems in the Wollongong metropolitan area and Shoalhaven Shire; the economic prospects of the small township of Warragamba; the feasibility of constructing an airfield near Mittagong, and a variety of other regional problems. In addition, research proceeded on economic aspects of the Australian co-operative movement.

There were seven publications.

Division of Engineering and Metallurgy

Department of Mechanical, Civil and Mining Engineering

Research was conducted on: Pressure wave phenomena in tubes; bulk handling of granular materials embracing conveyor performance studies, mechanical and rheological properties of wheat grains and flow of granular materials through chutes; subdivision computations; dynamic properties of structural frames; the design of solar telescopes; valve losses in compressors; simulation and linear programming applied to farms; analysis of speech patterns; materials research laboratory dealing

with the structural strength, including the effect of artificial ageing, of sandwich boards and the bond strength of steel and concrete for various coatings and finishes on the steel; investigation of curvature produced in plates with edge loading using Moire fringe techniques; development of high speed photographic techniques; investigation of the failure of crane runway rails; analysis of stress distribution produced at abrupt changes in section; structural model tests.

Sixteen candidates were enrolled for higher degrees (one M.E. and 15 M.Eng.Sc. students).

There were three publications.

Department of Electrical Engineering

The Department is actively engaged in the following areas of research: Automatic control; conduction mechanisms; adhesion forces; electrical discharges in gases.

Electrostatic Precipitators: Investigations have been carried out on the technology and basic physical processes taking place in electrostatic precipitators. A provisional letter of patent taken out by three members of the staff for a scientific instrument known as the "Electrostatic Precipitator Analyser" has now been ratified in several countries.

Although intended for use under the worst possible industrial environments, this measuring instrument is of laboratory precision and has been brought to commercial production. On behalf of the three inventors, Unisearch Ltd. applied for patents and negotiated with a number of internationally recognized companies for the right to manufacture and market the device. The Electricity Commission of New South Wales has now contributed a total of \$24,000 and the National Coal Research Advisory Committee \$10,000 for studies into electrostatic precipitation of difficult particles.

Seven candidates were enrolled for higher degrees.

There were four publications.

Division of Language and General Studies

Professor P. K. Elkin made the final revisions of a book for the Clarendon Press, Oxford, on *The Augustan View of Satire*. In addition Professor Elkin will be presenting the results of his "Examination of Eighteenth-Century Imitations and Translations of Juvenal", at the Twelfth Congress of the Australasian Languages and Literature Association in Perth in February, 1969.

Mrs. G. V. MacNeill was engaged on an examination of the linguistic acculturation of selected migrant speakers. At present the investigation is chiefly concerned with the nature of the interlingual shifts, including phonemic substitution, morphemic substitution and the transfer of linguistic patterns.

Mrs. Sharp worked with Mrs. E. Steibel-Zanotti on a parallel text translation of *Novelle de e Novecento*, Nineteenth Century Italian Short Stories.

Division of Physical Science

Department of Mathematics

The fields of research were: Reactor theory and related stochastic processes; marine physics; operations research applied to urban populations; computer languages; algebra (group theory).

Fifteen candidates were working for higher degrees and another three received the degree of Master of Science. The fourth year Honours course was introduced with one student reading for Honours and another studying for the M.Sc. qualifying.

Fourteen papers and reports were published.

Department of Physics

The main area of postgraduate study was in astrophysics with special research emphasis on observational infra-red solar physics for which an 18-inch solar telescope is nearing completion. There was also supporting work on related detection and measurement problems in the infra-red. Some work in Mossbauer spectroscopy also proceeded.

Two full-time Ph.D. candidates with Australian Atomic Energy Commission scholarships were enrolled and there were three M.Sc. candidates.

Department of Geology

Research projects were undertaken on the Southern Coal Measures petrology of the New England Area, and the magnetic properties of rocks.

There were two higher degree candidates and six papers were published during the year.

Division of Social Science

Department of Education

Research activities:

Steps are being taken to establish a curriculum research library in the teaching of social studies in the schools.

An enquiry is being conducted into the philosophical dimensions of moral education.

Three articles and one review were published.

The Department of Education was established in 1968, and commenced to offer the postgraduate Diploma in Education course for 26 full-time students. Considerable lecturing assistance was obtained from the Wollongong Teachers' College.

Department of History

French History: Research continued on "Science and the Enlightenment in eighteenth-century France"; this is the title of a thesis which has been published by the Institut et Musée Voltaire, Geneva.

Colonial History: Further investigations were made into the compara-

tive aspects of colonial administration. A second research visit was made by a member of the staff to Papua-New Guinea and the British Solomons in January-February, 1968, with the aid of funds from the Australian Research Grants Committee. Material was being prepared for publication on the last elections in the British Solomons and on native administration and political development in Papua-New Guinea.

Australian History: Research continued into immigration from the U.K. into New South Wales during the period 1860-1940, particular attention being paid to the social mobility of immigrants after their arrival. Further research was undertaken into Australian social history, including the origins of welfare policies in Australia, *circa* 1880-1910, and a preliminary assessment of educational opportunity in this period.

The Illawarra Social Survey: A member of staff is Joint Director of a social survey of the Illawarra District to determine the socio-economic structure of the region, and to attempt to establish trends that will assist in predicting changes in that structure. The Illawarra Regional Development Committee has voted \$8,500 to finance the first year of operation of this project.

The collection of local archival material commenced in an effort to build up a stock of primary source material for use by Honours students and staff.

Publications: One book, six articles and seven reviews were published.

Department of Psychology

Research continues into the relationships between academic achievement, anxiety, and parent-student value discrepancies. In the course of this research, fifty pupils and their parents were tested in the Gerringong-Kiama-Shellharbour area. The results of these tests are at present being processed by the computer.

JOHN SYDNEY JAMES CLANCY,
CHANCELLOR.

JOHN PHILIP BAXTER,
VICE-CHANCELLOR.

THE UNIVERSITY OF NEW SOUTH WALES
FINANCIAL STATEMENTS FOR THE YEAR
ENDED 31st DECEMBER, 1968

The Council of The University of New South Wales, as required by Section 42 of the Technical Education and University of New South Wales Act, 1949-1965, has the honour to transmit to the Minister for Education and Science for presentation to Parliament the financial statements of the University for the period of twelve months ended 31st December, 1968.

RUPERT H. MYERS,
Vice-Chancellor.

E. H. DAVIS,
Bursar.

The books and accounts of The University of New South Wales for the year 1968 have been audited in accordance with the provisions of Section 43 of the Technical Education and University of New South Wales Act, 1949.

In my opinion the accompanying Statement of Balances, together with Annexures "A" to "M" inclusive, sets out a true and correct view of the financial position of the University as at 31st December, 1968, and the transactions for the year then ended.

SYDNEY, 5th January, 1970.

D. FAIRLIE,
Auditor-General of New South Wales.

Fund	Balances Brought Forward 1st Jan., 1968	Receipts 1968	Total
	\$ c	\$ c	\$ c
<i>Brought Forward:</i>	73,851·73	149,675·57	223,527·30
Australian Wool Board Grants—(contd.)			
Area Influences on Greasy Wool Characteristics ...	1,632·65	3,282·13	4,914·78
Study of Dust Contamination in Wool ...	726·78	4,124·10	4,850·88
Complexes of Dyes with Surface Active Agents ...	1,217·76	11,881·60	13,099·36
Improvements in Wool Scouring and Application to Drying, Back Washing, Fibre Scouring and Drying...	10,524·99	46,818·40	57,343·39
Significant Wool Fibre Properties in Processing and End Use	4,472·73	5,885·79	10,358·52
Effects on Ionising Radiation and Ultra-violet Light on Wool	1,493·17	19,761·09	21,254·26
Blowing at Temperatures near and above 100°C ...	4,007·27	9,436·91	13,444·18
Permanence of Wool Bleaches	1,438·85	15,211·88	16,650·73
The Irregularities of Fibres and Fibre Assemblies ...	669·58	8,756·13	9,425·71
Studies in Wool Polymer Reactions	4,564·56	11,251·19	15,815·75
Development of a Weft Tension Regularity Device ...	40·72	40·72
Wool Top Making	5,496·68	43,504·44	49,001·12
Continuous Chemical Processing	3,915·35	35,491·95	39,407·30
Re-evaluation and Improvement of the Semi-worsted System of Yarn Manufacture	4,045·57	21,610·88	25,656·45
The Internal Structure and Mechanical Properties of Textile Assemblies	4,650·00	4,650·00
Selective Chemical Cleavage of Protein Chains	2,025·00	2,025·00
The Role of Acylation in Protein Structures	108·63	6,776·00	6,884·63
Post-Graduate Scholarships—			
M. T. Tierney	4,100·00	4,100·00
K. G. White	3,433·00	3,433·00
Boots Pure Drug Company (Australia) Grant to School of Wool and Pastoral Sciences	412·21	1,400·00	1,812·21
Broken Hill Mining Managers' Association Grant—Research on the Post-depositional History of the Broken Hill Orebody	1,429·00	1,429·00
The Broken Hill Proprietary Co. Ltd. Grants—			
Post-Graduate Research Scholarships—			
V. E. Croll	5,600·00	5,600·00
R. L. Player	6,000·00	6,000·00
D. G. Robertson	993·11	993·11
Attitude Research, School of Applied Psychology ...	100·00	100·00
The Edith E. Carnall Bequest	9,990·29	9,990·29
Case Institute of Technology (U.S.A.) Grant—Research on Economic Problems Related to the Development of Technology in Australia	2,233·54	2,233·54
Cement and Concrete Association of Australia Grant— Creep and Shrinkage Characteristics of Concrete ...	1,243·04	1,243·04
F. W. Cheshire Publishing Pty. Ltd. Grants—			
Donation for Research on Class and Power in Australia Revision of "Women in Australia"	1,500·00	1,500·00
Clean Air Society of Australia and New Zealand Grant— Investigation into the Design, Combustion Conditions and Operation of Small Incinerators	500·00	500·00
The Coca-Cola Export Corporation Grant—Advertising Research, Department of Marketing	3,000·00	3,000·00
G. J. Coles & Coy, Limited Post-Graduate Research Scholarships—			
K. Daly	2,500·00	2,500·00
R. T. Wheway	256·82	256·82
Colonial Sugar Refining Co. Ltd. Grant—Evaluation of the Efficacy of Calcium Sucrose Phosphate as an Inhibitor of Dental Caries	3,915·84	8,000·00	11,915·84
C.S.R. Chemicals Pty. Ltd. Grant—Special Post-Graduate Research Scholarship, School of Chemical Engineering ...	96·92	96·92
Committee of Enquiry into Nursing Grant for Research Assistance to Victorian Committee	1,000·00	1,000·00
<i>Carried Forward:</i>	140,877·79	444,926·06	585,803·85

Fund	Balances Brought Forward 1st Jan., 1968	Receipts 1968	Total
	\$ c	\$ c	\$ c
<i>Brought Forward:</i>	304,034·01	879,151·19	1,183,185·20
Life Insurance Medical Research Fund of Australia and New Zealand Grants—			
Research on the Mechanisms Underlying the Hypo-			
paemic Effects of Drugs and Diet	44·31		44·31
Cardiovascular Research	958·05	Dr. 958·05*	
Healing and Regeneration of Blood Vessels	55·52		55·52
Research in School of Physiology—Professor P. I. Korner	1,048·12	Dr. 368·26*	679·86
Research into Mechanisms of Neurogenic Hypertension	107·43	1,950·00	2,057·43
Research in School of Physiology—Dr. M. J. Scott	992·22	Dr. 948·22*	44·00
Long Range Weather Forecasting Trust Research Grant	147·19		147·19
Marine Geophysical Research Grants to School of Applied Geology—			
Australian Aquitane Petroleum Pty. Ltd.		5,000·00	5,000·00
Total Exploration (Aust.) Pty. Ltd.		5,000·00	5,000·00
Esso Exploration Australia Inc.	5,576·72	1,400·00	6,976·72
Farley & Lewers Ltd.	500·00		500·00
British Petroleum Development (Australia) Pty. Ltd.	3,362·54		3,362·54
Australian Gulf Oil Company	9,029·74		9,029·74
The Shell Company of Australia Limited	3,943·92		3,943·92
American Overseas Petroleum Ltd.	5,000·00		5,000·00
Broken Hill Proprietary Coy. Ltd.	5,000·00		5,000·00
Continental Oil Co. of Australia Ltd.		5,000·00	5,000·00
Mobil Exploration (Aust.) Pty. Ltd.		5,000·00	5,000·00
Marine Geophysical Research Studies of the Deep Sea Floor and Continental Margins Around Australia—School of Applied Geology		10,000·00	10,000·00
Marsupial Research Fund, Department of Zoology	230·02	175·00	405·02
The Master Builders Association of N.S.W. Post-Graduate Scholarships		500·00	500·00
Mathematics Research Fund to Assist Graduate Students		15·00	15·00
Men of the Land Society—Drought Feeding Trial—Hay Field Station		4,500·00	4,500·00
Merck, Sharp and Dohme (Australia) Pty. Ltd. Grants—			
Salary of Laboratory Assistant, School of Wool and Pastoral Sciences	1,000·00		1,000·00
Study of Enzyme Systems in Sheep	15·09		15·09
Study on the Enzyme Systems in Liverfluke	476·79	4,000·00	4,476·79
Research Fellowship in Clinical Pharmacology	13,495·56	5,000·00	18,495·56
Metropolitan Water Sewerage and Drainage Board Grant—Research into Deodorisation of Sewer using Biological Systems			
Mobil Oil Australia Ltd. Grants—			
The Mobil Lubrication Research Project	417·51		417·51
The Mobil Highway Engineering Fellowship	456·21	2,350·00	2,806·21
Mohair Advisory Board (South Africa) Grant—Research in Various Aspects of Mohair	3,816·20	2,490·00	6,306·20
Monsanto Chemicals (Australia) Limited Grant—Anthelmintic Research Programme	90·06		90·06
Mulberrygong Field Station—School of Wool and Pastoral Sciences	438·43	9,096·58	9,535·01
Myer Foundation Grant to Library Association of Australia for Conduct of Pilot Survey on Library Employment in Australia	3,850·00		3,850·00
Myer Foundation Fellowship in Librarianship	370·08		370·08
National Coal Research Advisory Committee Grants—			
Spouted Bed Carbonization	14·19	Dr. 14·19*	
Joint Projects in School of Chemical Engineering	Dr. 166·85	11,393·07†	11,226·22
Joint Projects in Department of Fuel Technology	Dr. 122·75	12,936·08†	12,813·33
Electrostatic Precipitation of High Resistivity Coal Ash		4,948·11	4,948·11
Pulsed Gasification of Coal and Coke	24·75		24·75
<i>Carried Forward:</i>	364,205·06	967,616·31	1,331,821·37

* Refund of balance of previous year's grant.

† Includes adjustment of previous year's expenditure.

STATEMENT OF TOTAL RECEIPTS AND PAYMENTS FOR THE CALEN

Fund	Balances Brought Forward 1st Jan., 1968	Receipts 1968	Total
	\$ c	\$ c	\$ c
<i>Brought Forward:</i>	463,802·99	1,142,580·73	1,606,383·72
Reserve Bank of Australia Grants from Rural Credits Development Fund—(contd.)			
Ecological Significance of Rhizobium Phage and Related Phenomena	6,050·00	6,050·00
Selection of High Multiple Births in Merino Sheep ...	2,602·25	1,800·00	4,402·25
Selection of Merino Ewes which Experience Early Fertile Oestrus
Collection of Materials for a Book on the Grazing Ruminant	4,578·35	4,590·00	9,168·35
Study of Streptomyces Species from Agricultural Soils ...	584·00	584·00
Study of Microbial Response to the Physico-chemical Environment	3,368·73	3,368·73
Production of Wheat-alien Monosomic Lines	3,644·60	1,250·00	4,894·60
The Nature of the Surface of the Root-nodule Bacteria ...	5,078·16	2,660·00	7,738·16
Study of Forced and Free Flow of Granular Materials through Open and Closed Conduits	3,500·00	3,500·00
The Influence of Drying Rate and Rate of Moisture on the Physical Properties of Grain	2,226·08	2,226·08
Reserve Bank of Australia Grant from the Economic and Financial Research Fund—	650·00	300·00	950·00
Impact of Automation on a Section of Australia's White Collar Work Force	84·53	84·53
A Policy Oriented Econometric Model of the Australian Economy	3,300·00	3,300·00
An Investigation of the Application of Principles of Numerical Taxonomy	500·00	500·00
Riker Laboratories Australia Pty. Ltd. Fellowship in Thoracic Medicine	2,800·00	9,100·00	11,900·00
Roche Products Pty. Limited Grants—			
Post-Graduate Scholarship for Research into Drought Feeding	9,500·00	9,500·00
Drought Feeding and Vitamin A Utilisation—Hay Field Station	13,694·00	13,694·00
Rural Bank of New South Wales Grants—			
Investigation of Aspects of Water Problems in Australia Scholarship—Post-Graduate Diploma Course in Industrial Design	341·29	341·29
Sandoz Australia Pty. Ltd. Research Fellowship in Medicine ...	1,200·00	1,200·00	2,400·00
School of Applied Physics and Optometry Research Fund... ..	488·52	5,000·00	5,488·52

STATEMENT OF TOTAL RECEIPTS AND PAYMENTS FOR THE CALEN

Fund	Balances Brought Forward 1st Jan., 1968	Receipts 1968	Total
	\$ c	\$ c	\$ c
<i>Brought Forward:</i>	517,060·45	1,224,054·95	1,741,115·40
The University of New South Wales—School of Surgery (Prince Henry/Prince of Wales Hospitals) Research Fund	599·99	2,625·00	3,224·99
Upjohn Pty. Ltd. Grants—			
Study of Controlled Breeding in Sheep in Australia ...	1,274·39	1,274·39
Studies on the Effect of M.G.A. on Ewes ...	176·95	176·95
Upjohn International Inc., Kalamazoo (U.S.A.) Grant—			
Research into Controlled Sheep Breeding ...	3,885·88	10,862·00	14,747·88
Urological Research Fund—School of Surgery	1,720·00	1,720·00
U.S. Air Force Office of Scientific Research Grant—Re- search on Nuclear Three Body Problem ...	2,140·70	4,868·98	7,009·68
U.S. Department of Health, Education and Welfare Grants—			
Insect Venoms, Attractants and Repellents ...	4,707·51	16,793·99*	21,501·50
Fellowship Supply Allowance—Dr. E. C. Horn ...	65·53	Dr. 24·53†	41·00
Mediation of Vascular Responses in Inflammation ...	66·00	66·00
Pathways of Fat Transport from the Intestine ...	1,017·61	1,280·50	2,298·11
Water Research Foundation of Australia Grants—			
Nuclear Chemical Study of the Age and Renewal Rates of the Great Artesian Basin ...	816·46	816·46
Research Fellowship on the Growth of Green Algae as a Method of Sewage Treatment ...	909·42	909·42
Hydrological Data Collection ...	2,078·19	2,010·47	4,088·66
Unsteady Flow in Porous Media ...	841·09	841·09
Study of Measurement of Time of Concentration and Hydrographic Characteristics of Small Rural Catch- ments using Radioactive Tracers ...	394·18	394·18
Research on the Effects of Exotic Softwood Afforestation on Water Yield ...	Dr. 439·53	439·53
Research on the Optimum Design of Storage Reservoirs	295·48	295·48
Research on Low-cost Bywash Construction of Farm Dams ...	16·22	16·22
Desiccation Failures in Small Dams ...	3,417·42	Dr.42‡	3,417·00
Review and Analysis of the Use of Plastic in the Field of Water Engineering ...	896·59	896·59
Design Hydrographs for Flood Estimation ...	1,202·92	3,750·00	4,952·92
The Rational Method of Flood Estimation ...	265·22	265·22
Processing and Publication of Data from Small Catch- ments ...	1,165·77	6,800·00	7,965·77
Separation of Algae by Coagulation in an Expanding Solids Contact Basin ...	4,270·00	4,270·00
Instrumentation for Small Catchments ...	515·00	515·00	1,030·00
Reduction of Evaporation from Stock Water Tanks in the Arid Zone ...	1,750·00	1,750·00
A Comparative Study of the Soil/Water Status in Pine and Eucalypt Forests	2,500·00	2,500·00
Field Studies in the Hydrology of the Unsaturated Zone	3,000·00	3,000·00
The Wellcome Trust Grant—Studies of Anaemia in New Guinea ...	Dr. 437·89	3,214·35	2,776·46
Wheat Industry Research Council Grants—			
Research into Wheat Drying Techniques ...	758·15	4,250·00	5,008·15
Research on Scarifier and Combine Drill Points ...	Dr. 1,414·06	7,178·68	5,764·62
Research on Comparative Performance of Different Systems of Tine Mounting ...	1,866·44	3,765·00	5,631·44
Gravity Flow of Grain in Inclined Ducts ...	250·00	400·00	650·00
New Resistances to Old Diseases of Wheat ...	3,161·44	4,706·87	7,868·31

E. H. Davis,
Bursar.

1968, in relation to the year 1968, the above statement correctly sets out the fees and State grants received by University in respect to that year has been applied for expenditure, not being capital expenditure or expenditure

D. Fairlie,
Auditor-General of New South Wales.

THE UNIVERSITY OF NEW SOUTH WALES

SUMMARY OF FINANCES—1968

Finances of the University, 1968

This summary of the finances of the University is based on statements of accounts for 1968 audited by the Auditor-General and certified accordingly for submission to the Minister for presentation to Parliament in accordance with Section 42 of the Technical Education and University of New South Wales Act, 1949-1965.

During 1968 income received from all sources totalled \$22,525,178 while aggregate expenditure totalled \$24,225,285.

Income was received from the following sources, and comparison is made with 1967 and 1966 in amount and percentage of total:

Source of Income	1968		1967		1966	
	Amount	%	Amount	%	Amount	%
	\$		\$		\$	
1. <i>State Govt. Grants—</i>						
Recurrent Expenditure	7,970,613		7,268,684		6,577,723	
Schedule Projects	1,515,872		1,083,484		1,489,644	
General Research	120,000		120,000		133,000	
Australian Research Grants Committee Projects		224,579	
Total	9,606,485	42·65	8,472,168	41·42	8,424,946	44·32
2. <i>Commonwealth Govt. Grants—</i>						
Recurrent Expenditure	5,748,000		5,247,000		4,832,000	
Schedule Projects	1,527,367		638,965		1,339,170	
General Research		133,000	
Australian Research Grants Committee Projects	302,999		264,838		224,579	
Total	7,578,366	33·64	6,150,803	30·07	6,528,749	34·34
3. <i>Special Purposes Funds—</i>						
Research	1,316,770		1,291,138		973,614	
Scholarships, Prizes, etc.	116,132		70,553		71,979	
Other	844,121		1,702,626		363,233	
Total	2,277,023	10·11	3,064,317	14·98	1,408,826	7·41
4. <i>Students' Fees</i>	2,690,387	11·94	2,474,616	12·10	2,412,437	12·69
5. <i>Other General Income</i>	372,917	1·66	292,610	1·43	235,088	1·24
Total Income	22,525,178	100·00	20,454,514	100·00	19,010,046	100·00

Expenditure was incurred on the following purposes from the sources indicated, and again comparison is made with 1967 and 1966 in amount and percentage of total:

Expenditure Headings	1968		1967		1966	
	Amount	%	Amount	%	Amount	%
	\$		\$		\$	
1. <i>Salaries and Staff Charges—</i>						
Recurrent Expenditure	13,408,179		11,600,935		10,837,356	
General Research	547		14,749		95,788	
Special Purposes—Research	810,832		745,213		679,803	
Special Purposes—Other	178,086		127,112		111,390	
Australian Research Grants Committee Projects	93,779		81,952		31,305

Total	3,740,297	15·44	2,966,356	15·40	2,938,205	15·33
4. <i>Major Plant and Equipment, Furniture and Library—</i>						
Recurrent Expenditure	1,144,589		990,593		787,319	
General Research	7,889		58,766		130,980	
Grants for Building Projects, etc. under States Grants (Universities) and Universities (Financial Assistance) Acts	183,826		78,756		552,701	
Grants Non-Schedule Projects	74		
Special Purposes—Research	178,067		223,340		179,038	
Special Purposes—Other	300,559		99,186		351,744	
Australian Research Grants Committee Projects	210,944		211,898		197,914	
Total	2,025,948	8·36	1,662,539	8·63	2,199,696	11·48
Total Expenditure	24,225,285	100·00	19,259,849	100·00	19,161,312	100·00

The aggregate funds held at the close of 1968 amounted to \$4,038,718 comprising the following funds, and comparison is made with 1967 and 1966:

Funds	1968	1967	1966
	\$	\$	\$
Recurrent Purposes	Dr. 430,144	322,570	23,529
General Research	12,824	63,469
Special Purposes—Research	654,818	557,241	422,106
Special Purposes—Scholarships, etc.	83,250	48,203	48,376
Special Purposes—Other	3,073,370	3,911,795	2,861,774
State Government Non-Schedule Projects	76,181	76,369	89,254
State and Commonwealth Government Grants for Schedule Projects under State Grants (Universities) and Universities (Financial Assistance) Acts	512,106	704,292	858,663
Australian Research Grants Committee Projects	69,137	123,931	211,689
Total Funds	4,038,718	5,757,225	4,578,860

The operating income and expenditure in 1968 (i.e. exclusive of income and expenditure on capital items—Universities (Financial Assistance) Act definition, Research Grants, Special Purposes, Schedule and Non-Schedule Building Projects and Equipping and Royal Military College, Duntroon) are shown below and compared with 1967 and 1966:

Income was received from the following sources:

Source of Income	1968		1967		1966	
	Amount	%	Amount	%	Amount	%
	\$		\$		\$	
1. State Government Grants—Consolidated Revenue Fund ...	7,970,613	47·84	7,268,684	47·69	6,577,723	47·07
2. Commonwealth Govt. Grants—Recurrent	5,748,000	34·50	5,247,000	34·42	4,832,000	34·58
3. Students' Fees	2,690,387	16·15	2,474,616	16·24	2,412,437	17·26
4. Other General Income	251,172	1·51	251,698	1·65	152,086	1·09
Total Income	16,660,172	100·00	15,241,998	100·00	13,974,246	100·00

Expenditure was incurred as follows:

Expenditure Headings	1968		1967		1966	
	Amount	%	Amount	%	Amount	%
	\$		\$		\$	
1. <i>Salaries and Staff Charges</i> ...	13,408,179	77.08	11,600,935	77.72	10,837,356	77.68
2. <i>Maintenance Expenses</i> ...	2,851,718	16.40	2,344,930	15.71	2,353,296	16.87
3. <i>Major Plant and Equipment, Furniture and Library</i> ...	1,134,589	6.52	980,793	6.57	760,969	5.45
Total Expenditure ...	17,394,486	100.00	14,926,658	100.00	13,951,621	100.00

The charts which follow show as part of each \$1 of income, the amounts received from each source of income, and as a part of each \$1 of expenditure, the amounts expended on each purpose in respect of (1) the aggregate income and expenditure, and (2) the operating income and expenditure of the University for 1968:

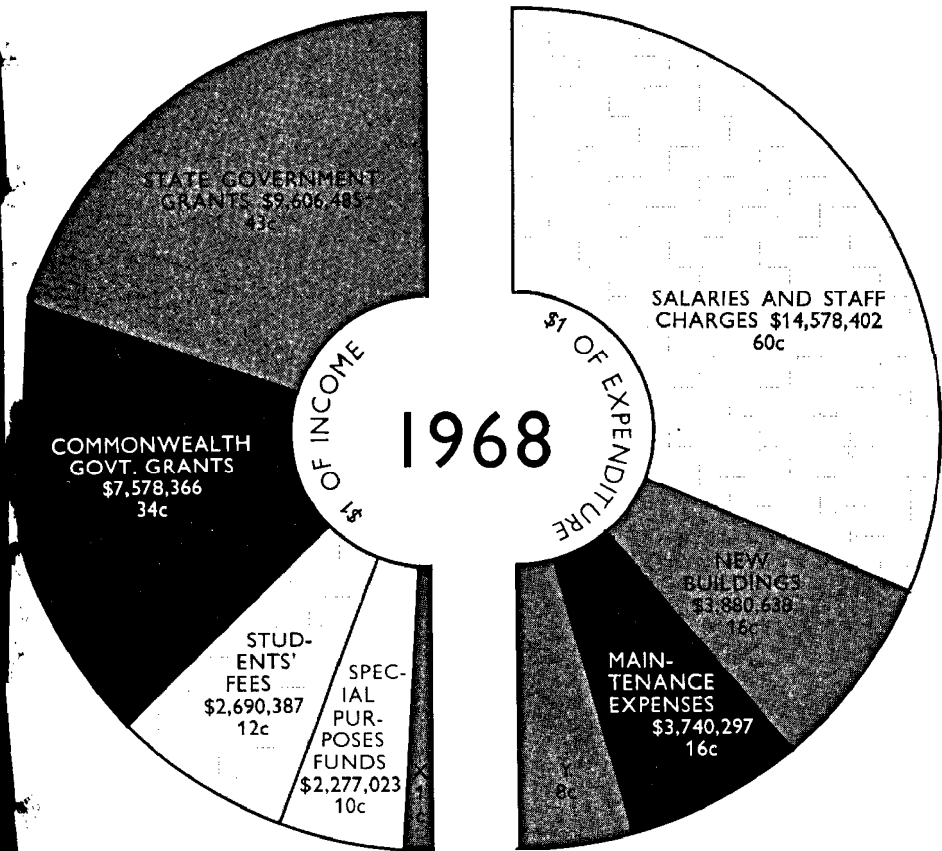

Chart 1

Showing in respect of 1968 the Aggregate Amounts of Income and Expenditure

A. The amounts received from the various sources of income and incurred on the various purposes of expenditure.

B. The proportion which each source of income or purpose of expenditure represents of each \$1 of total income or expenditure.

Aggregate Income \$22,525,178 Aggregate Expenditure \$24,225,285

X Other General Income \$372,917.

Y Plant, Furniture and Library \$2,025,948.

Chart 2

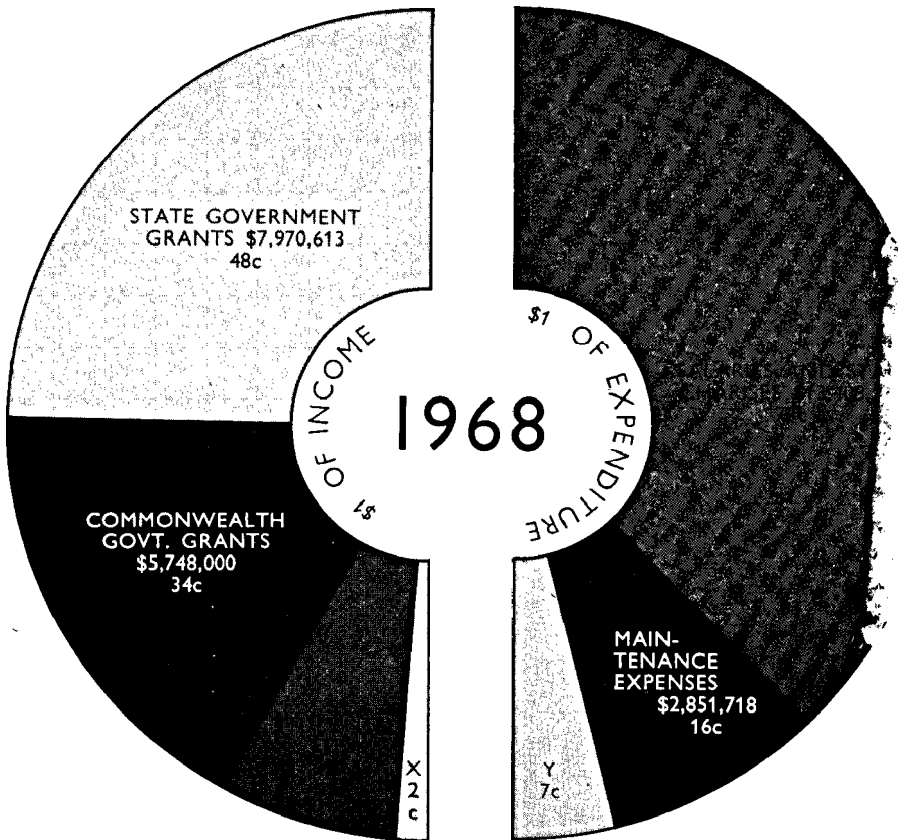

Showing in respect of 1968 the Income Received and Expenditure Incurred on University Purposes Exclusive of Capital and Special Purposes, etc.*

A. The amounts received from the various sources of income and incurred on the various purposes of expenditure.

B. The proportion which each source of income or purpose of expenditure represents of each \$1 of total income or expenditure.

Operating Income \$16,660,172

Operating Expenditure \$17,394,486

X Other General Income \$251,172.

Y Plant, Furniture and Library \$1,134,589.

* In Terms of Definition—Universities (Financial Assistance) Act.
